Welcome to LogisX

This is the user manual for the LogisX dispatch and fleet management platform. Whether you are a driver behind the wheel, a dispatcher coordinating loads, a super admin managing the business, or an investor who owns one of the trucks, this guide walks you through everything the app can do for you.

What this manual covers

The manual is organized by role. Find your role in the table of contents, jump to that chapter, and read top-to-bottom — you will see the same screens you see in the app, with step-by-step instructions for every workflow you'll touch.

ROLE	CHAPTER	WHAT YOU'LL LEARN
Driver	Chapter 2	How to accept loads, report GPS, update status, upload proof of delivery, and message dispatch.
Dispatcher	Chapter 3	How to assign loads, monitor the fleet, manage expenses, and keep operations running.
Super Admin	Chapter 4	How to manage users, review applications, run financial reports, and use the admin tools.
Investor	Chapter 5	How to view your fleet's earnings, download reports, and access your signed documents.

Three chapters cover scenarios that don't require an account at all:

- **Chapter 6 — Public Workflows.** How drivers apply for work, how investors apply to fund a truck, and how customers track a load with just a load ID.

The last two chapters — **Troubleshooting** and **FAQ** — answer the questions that come up most often, regardless of role.

What this manual does NOT cover

For technical details — server architecture, API endpoints, database schema, deployment — see the companion **Technical Documentation** PDF. This manual is written for the people who use the app, not the people who run the servers.

Conventions used

Throughout the manual:

- **Bold text** highlights buttons, menu items, and field labels you'll see on screen.
- `Monospace text` indicates literal values you type (load IDs, URLs).
- Screenshots show the app as it appears at the time of publication. If your screen looks slightly different, the platform may have been updated — the underlying workflow should be the same.
- Callouts marked **Note** or **Warning** highlight things that are easy to miss or get wrong.

Getting help

If you're stuck and the manual doesn't answer your question:

- **Drivers** — contact your dispatcher first; they can see your status, your loads, and the system as a whole.
- **Dispatchers and Admins** — contact your operations lead or the technical team.
- **Investors** — contact LogisX operations using the email link in your dashboard's footer.

Now turn the page and find your role. Welcome aboard.

Getting Started

This chapter covers the basics that apply to every user, regardless of role: signing in, what to do if you forget your password, and what to expect the first time you open the app.

Signing in

Open your browser and go to **app.logisx.com**. You will see the login screen.

Enter your **username** and **password** — both are case-sensitive — and tap or click **Sign in**. After a successful sign-in, the app routes you to the home screen for your role:

- Drivers land on the driver app (`/driver`).
- Dispatchers and Super Admins land on the operations dashboard (`/dashboard`).
- Investors land on the investor dashboard (`/investor`).

If your credentials are wrong, you'll see a brief error message. After several failed attempts in a short window, the system temporarily blocks further attempts from your browser as a brute-force protection. Wait a few minutes and try again.

Forgot your password

The app does not have a self-service password reset. Contact your administrator and ask them to reset it for you. They will set a temporary password and share it with you; sign in once and change it from your profile.

Changing your password

From any logged-in screen, open your profile (usually a menu accessed from the sidebar or the upper-right of the screen) and use the **Change Password** option. You'll be asked for your current password and a new password. After changing, you remain signed in.

If you've forgotten your current password, you cannot change it yourself — contact your administrator for a reset.

What browser to use

LogisX works best in current versions of:

- **Google Chrome** (recommended for desktop)

- **Microsoft Edge**
- **Safari** on Mac and iPhone
- **Firefox**

The driver app especially benefits from Chrome on Android or Safari on iPhone because GPS reporting is more reliable with these browsers.

Internet Explorer is not supported. If you only have IE, you'll need to install a modern browser.

What happens when your session expires

If you don't use the app for an extended time, your session will quietly time out. The next action you take (clicking a link, submitting a form) will redirect you to the login screen. Sign back in and the app returns you to where you were trying to go.

This is intentional — it protects your account on shared devices.

How the app stays current

LogisX uses real-time updates: when a load is assigned, a status changes, or a message arrives, the screens of every relevant user refresh automatically without anyone having to click reload. You won't see most refresh buttons on most screens, because the screens are always live.

The driver app's tabs (Loads, Status, Alerts, Kit, Messages) update the moment a dispatcher acts. The operations dashboard updates the moment a driver accepts a load or reports a new GPS position. The investor dashboard updates as new revenue arrives.

If you ever see information that looks stale, refresh the page — but this is rare in practice.

Where to find help

Each role chapter ends with a list of the most common situations and how to handle them. If you're stuck:

1. **First**, check the relevant chapter for your role.
2. **Second**, check the **Troubleshooting** chapter near the end of this manual.
3. **Third**, contact your support person:
 - **Drivers** — your dispatcher.
 - **Dispatchers and Admins** — your operations lead or technical contact.

- **Investors** — LogisX Operations (the email link is in your dashboard footer).

Now go to the chapter for your role.

Driver Guide

This chapter walks you through everything you'll do as a driver in LogisX, from first sign-in to delivered load.

The first time you sign in

After your application is accepted, you'll receive your username and a temporary password. Sign in at **app.logisx.com**. The first thing you'll see is the **Onboarding Lock** — a full-screen panel that blocks the rest of the app until you complete the required onboarding steps.

Location Access Required

LogisX needs your location so dispatch can track your progress and auto-update load status at pickup & delivery. You can't receive assignments without it.

Location is blocked for this site. Re-enable it:

iPhone Safari: tap the "aA" icon in the address bar → Website Settings → Location → Allow.

Android Chrome: tap the lock icon in the address bar → Permissions → Location → Allow.

Desktop: click the lock in the address bar → Site Settings → Location → Allow, then reload.

Turn on Location

Log Out

Onboarding has these steps:

1. **Sign onboarding documents.** A list of agreements appears (equipment policy, mobile policy, substance abuse policy, independent contractor agreement). Tap each one in turn, read the document, check the acknowledgement box, type your full name as your signature, and tap **Sign**. The system generates and stores a signed PDF copy for the company's records.
2. **Pre-employment screening.** Your administrator schedules this — you'll see a status indicator on the onboarding panel showing whether it's pending or complete.
3. **FMCSA Clearinghouse enrollment.** You enroll on the FMCSA site directly and grant LogisX permission to query your record. Your administrator verifies the permission and marks this step complete.
4. **Driver training.** When training is assigned, you'll see the requirement on the onboarding panel; the administrator marks it complete after you finish.

Once every step shows green, the lock screen disappears and you have full access to the driver app.

Granting location access

The first time you open the app on a phone after onboarding, you'll be asked to grant **location access**. Tap **Allow**. The driver app uses your phone's GPS to:

- Show your current position to the dispatcher.
- Auto-advance load status when you arrive at the shipper or receiver (geofencing).
- Give the customer a real-time tracking link they can share.

If you accidentally deny permission, the app shows a "Location Access Required" screen with instructions for re-enabling it. You won't be able to use the loads features until you do.

Note. The app reports your position only while the driver tab is open. If you close the browser, GPS stops. Keep the tab open while you're on a load.

The five tabs

The driver app has five tabs across the bottom (or top on tablets):

1. **Loads** — your assigned and pending loads.
2. **Status** — quick status update for your current load.
3. **Alerts** — notifications about new loads, messages, and reminders.
4. **Kit** — your truck's documents (registration, insurance, inspections) and onboarding documents.
5. **Messages** — chat with dispatch.

Location Access Required

LogisX needs your location so dispatch can track your progress and auto-update load status at pickup & delivery. You can't receive assignments without it.

Location is blocked for this site. Re-enable it:

iPhone Safari: tap the "aA" icon in the address bar → Website Settings → Location → Allow.

Android Chrome: tap the lock icon in the address bar → Permissions → Location → Allow.

Desktop: click the lock in the address bar → Site Settings → Location → Allow, then reload.

Turn on Location

Log Out

Move between tabs by tapping them. Each tab shows a small badge with a count when something needs your attention (e.g., "Loads (1)" means you have one new load awaiting your response).

Accepting or declining a load

When a dispatcher assigns you a load, it appears on the **Loads** tab with **Accept** and **Decline** buttons. The card shows the Load ID, pickup and delivery locations, dates, and the rate.

Read the card carefully. If you can take the load, tap **Accept**. The status changes to "Dispatched" and the load moves to your active list.

If you can't take it, tap **Decline**. The load returns to the job board and the dispatcher is notified to reassign. **Use this honestly** — declining a load isn't a problem if you have a legitimate reason; accepting one you can't actually run is.

Reporting status as you go

The **Status** tab shows your current active load with a status stepper. The expected progression is:

Dispatched → At Shipper → Loading → In Transit → At Receiver → Unloading → Delivered →
POD Received

Most transitions happen automatically:

- When you enter the **geofence around the pickup location** (about 500 m), your status auto-advances to **At Shipper**.
- When you leave the pickup area, it advances to **In Transit**.
- When you enter the dropoff geofence, it advances to **At Receiver**.

The geofence isn't perfect. If you're at the location but the app didn't auto-advance, tap the next status in the stepper to update it manually. You'll be asked for a brief reason — anything like "auto-update missed" is fine.

Tip. You can also update the status from the load card on the Loads tab — tap the load and pick a status. Both routes do the same thing.

Uploading proof of delivery (POD)

After you deliver, you need to upload the signed bill of lading or proof-of-delivery document. From the load detail screen, tap **Upload POD** and either:

- **Take a photo** with your phone's camera.
- **Choose from gallery** if you've already taken it.

The app uploads the photo, converts it to a PDF, and stores it. Dispatch is notified the moment the upload completes. The load status advances to **POD Received**.

Location Access Required

LogisX needs your location so dispatch can track your progress and auto-update load status at pickup & delivery. You can't receive assignments without it.

Location is blocked for this site. Re-enable it:

iPhone Safari: tap the "aA" icon in the address bar → Website Settings → Location → Allow.

Android Chrome: tap the lock icon in the address bar → Permissions → Location → Allow.

Desktop: click the lock in the address bar → Site Settings → Location → Allow, then reload.

Turn on Location

Log Out

You can upload multiple PODs per load if you have several pages. Once uploaded, you can't delete them yourself — ask dispatch if you need a correction.

Logging expenses

The **Kit** tab includes an **Expenses** section where you log fuel, repairs, tolls, scale tickets, and other trip-related costs. To log:

1. Tap **Add Expense**.
2. Photograph the receipt. The app uses AI to read the amount, date, vendor, and (for fuel) the gallons and odometer. Fields populate automatically — confirm them.
3. Pick an expense type if it wasn't detected correctly.
4. Tap **Save**.

Your expense appears in the list with a "Pending" status until an admin reviews it. Approved expenses count against trip costs.

If the AI reads the receipt wrong (it happens with crumpled or blurry photos), just edit the fields before tapping **Save**. The auto-fill is a convenience, not a requirement.

Messaging dispatch

The **Messages** tab is a chat with your dispatcher. You can:

- **Type a message** in the box at the bottom and tap **Send**.
- **Attach a photo** by tapping the paperclip icon (useful for sending a picture of an issue you've spotted).
- **See unread messages** — the Messages tab shows a badge when new messages arrive.

Messages are organized by load when applicable. If your dispatcher messages you about a specific load, the conversation thread appears on the relevant load card too.

Viewing your invoices

The **Kit** tab also has an **Invoices** section showing your weekly pay invoices. Each invoice lists the loads, days worked, base pay, any adjustments, and the total. You can download each invoice as a PDF for your records.

If something looks wrong on an invoice, message dispatch with the invoice number and what you're disputing. Admin can issue a correction.

Viewing your truck's documents

The **Kit** tab's **Documents** section shows the documents your administrator has shared with you for the truck you're currently driving:

- Registration
- Insurance card
- Annual inspection
- Any other documents dispatch has flagged "driver-visible"

You can view these documents inline (they open in your browser) — handy at a weigh station or roadside check. You cannot download them, only view, by design.

When you're reassigned to a different truck, the document list changes automatically to show that truck's documents.

Common situations

"I declined a load by accident." Message dispatch right away — they can re-offer it to you if you both agree.

"My GPS shows the wrong location." Force-refresh the driver tab. If the wrong position persists, your phone's GPS may need a moment to recover (especially after a long stretch indoors or in a tunnel).

"My status didn't auto-advance when I got to the shipper." Tap the status manually. The geofence sometimes misses, especially in dense urban areas with poor GPS.

"I lost cell signal and now my status is wrong." The app will catch up when signal returns — your reports queue locally. If something is still out of sync after you regain signal, message dispatch with the load ID.

"I don't see a load that I know was assigned to me." Pull-to-refresh the Loads tab. If it still doesn't show, the assignment may have been cancelled — ask dispatch.

"I can't log in." Double-check the username — they're case-sensitive. If you're sure it's right, ask dispatch to reset your password.

What you can't do (by design)

- **You can't see other drivers' loads or status.** The app shows only your own work.

- **You can't see financial details** for other drivers or for the company.
- **You can't edit load details** (broker, rate, addresses) — those are managed by dispatch.
- **You can't delete an expense** after submitting it. You can ask dispatch to reject it if it's wrong.

If something feels missing, it probably is — and it's usually because that function belongs to dispatch, not to you. Message them.

Dispatcher Guide

Dispatchers run the daily operation. This chapter covers your workflow: where loads come from, how to assign them, how to track trucks on the road, and how to communicate with drivers and customers.

Your home screen

When you sign in, you land on the **Operations Dashboard** at `/dashboard`. The dashboard is organized into four tabs:

1. **Job Board** — unassigned and pending loads waiting for a driver.
2. **Active Loads** — loads currently in progress (dispatched, in transit, at receiver).
3. **Completed Loads** — recently delivered work.
4. **Fleet** — the drivers and trucks you have available.

A row of KPI cards across the top shows totals: active loads, pending loads, trucks on the road, revenue this period.

Where loads come from

Most loads arrive automatically. When a broker emails a rate confirmation to info@logisx.com, an automated workflow parses the PDF and adds a new load to the system. You'll see it appear on the **Job Board** within seconds, and an alert chime briefly highlights it.

You can also create loads manually from the **New Job** button. Manual entry is mostly used for unusual situations (a phone-confirmed load, a corrected re-entry, a test load).

Assigning a load

On the **Job Board**, each load card shows the broker, the rate, the pickup and dropoff cities, the dates, and the load ID. To assign:

1. Tap the load card.
2. The detail view opens. Pick a driver from the **Driver** dropdown — only available drivers (those not currently on an active load) appear.
3. Tap **Assign**.

The driver receives an instant notification on their phone. The load moves from Job Board to Active Loads with status **Dispatched**, awaiting the driver's accept/decline.

If the driver declines, the load returns to the Job Board with a note showing the decline. Pick a different driver and reassign.

Reassigning an active load

If a driver gets sick, has a breakdown, or otherwise can't continue, you can hand the load to someone else mid-trip:

1. Open the load from **Active Loads**.
2. Change the **Driver** dropdown to the new driver.
3. Tap **Save**.

The old driver is notified the assignment was withdrawn; the new driver is notified they have a new load. Status stays at its current value — you don't need to restart from Dispatched.

Note. Cancelling a load (vs. reassigning) is a Super Admin action, not a dispatcher action. If a load needs to be cancelled outright, ask Super Admin to handle it.

The live tracking map

Tap **Tracking** in the sidebar (or open `/tracking`). You'll see a map with markers for every driver currently on a load.

- **Blue marker** — the driver's current position. The marker glides smoothly between positions instead of jumping, which makes movement easier to read.
- **Green pin** — origin (pickup).
- **Red pin** — destination.
- **Orange dashed line** — the path the driver has already traveled.
- **Blue solid line** — the remaining route to destination.

Click a marker to see the driver's name, current speed, last update time, and a link to the load details. Use this to gauge whether a driver is on schedule, see traffic-related delays, or look for trucks that haven't moved when they should be moving.

If a driver's position hasn't updated in several minutes, the marker dims and shows the last-update time. This usually means the driver's phone has lost signal or backgrounded the tab — not necessarily a problem.

Updating a load's status

You can update a load's status from the **Active Loads** tab without waiting for the driver. Click the load, change the **Status** dropdown, and save. This is useful when:

- A driver tells you on the phone they've arrived (and they're between GPS reports).
- The geofence missed an auto-advance.
- You're correcting a status that was set wrong.

The driver sees the change immediately on their phone.

Logging expenses on the driver's behalf

If a driver pays for something by phone (a tire repair, a quick fuel stop), you can log the expense for them:

1. Open **Expenses** in the sidebar.
2. Tap **Add Expense**.
3. Choose the driver from the dropdown, fill in the details, and (optionally) upload a photo of the receipt.
4. Save.

The expense appears in the system as if the driver logged it, with a note that dispatch entered it.

Messages

The **Messages** screen shows all your conversations with drivers. Each driver has a thread; load-specific messages appear in both the driver thread and on the load detail.

- **New messages** are highlighted with a blue dot.
- **Send a message** by typing in the box and tapping **Send**.
- **Attach a photo** with the paperclip icon (useful for sharing a customer-provided BOL, a corrected rate con, etc.).

You can also message from inside a load's detail view — the conversation is scoped to that load so the driver knows what you're talking about.

Notifications

The **Notifications** screen is the catch-all alert feed. Every action that involves you — a new load arrived, a driver accepted/declined, a POD was uploaded, a status changed unexpectedly — shows up here in reverse chronological order.

Click any notification to jump to the relevant load. The dashboard switches to **Active Loads** and opens the load's detail modal so you can see what happened in context.

Fleet health

The **Fleet** tab on the dashboard shows trucks and trailers, who's assigned to what, and which trucks are idle. Use this to:

- See at a glance which drivers are available.
- Spot a truck nobody's been assigned to (maintenance candidate).
- Confirm a driver-truck pairing before assigning a new load.

You can drill into a specific truck for full details (mileage, last inspection, documents) but most edits to truck records are Super Admin actions.

Customer tracking links

For every active load, a public tracking URL is available so the broker or shipper can watch the load themselves without needing an account.

1. Open the load from **Active Loads**.
2. Tap **Copy tracking link**.
3. Paste into an email or text to the customer.

The link shows the load's progress, ETA, current location, and pickup/delivery addresses. Driver name, phone, broker info, and rate are **not** exposed — the customer sees only what they should see. The link is rate-limited so a customer can refresh it freely without affecting our other services.

What you can do and what you can't

You **can**:

- Assign loads to drivers.

- Reassign loads in flight.
- Update load status.
- Send and receive messages with drivers.
- Add expenses on behalf of drivers.
- View the tracking map.
- Read the public customer tracker for any load.

You **cannot**:

- Cancel a load (Super Admin only — by client decision).
- See the Financials dashboard (Super Admin only).
- Add or edit user accounts.
- Approve invoices (Super Admin only).
- Approve or reject expenses (you can see them, but approval is Super Admin).
- Edit truck records or trailer records other than read-only viewing.

If you need any of those actions, escalate to a Super Admin.

Common situations

"A load was sent to the wrong driver." Open the load in Active Loads and change the Driver dropdown. The old driver is notified.

"A driver isn't responding to a load assignment." Check their location on the Tracking map — if their phone is offline, they may not have seen it. Message them on Messages; if they still don't respond, reassign.

"The status auto-advanced too early." The geofence is generous (~500 m). If a driver's GPS pings briefly inside the geofence then back out (parking on the wrong side of a yard, going through a gas station next to the receiver), the status might advance prematurely. You can edit the status back from the Active Loads tab.

"A POD upload failed." The driver can retry from their phone. If it keeps failing, ask the driver to text or email the POD as a fallback and you can upload it from your side via the load's documents area.

"A broker is calling about a load I can't find." Search by Load ID on the dashboard. If it's not there, check the Archive in the sidebar — it might have been delivered and rolled out of Active.

"I see an alert that doesn't make sense." Notifications are clickable — tap to see the underlying load, then read the audit trail (Admin Tools) for the full history of who did what.

Super Admin Guide

Super Admin is the top of the access hierarchy. You can do everything a dispatcher can do, plus everything that touches money, users, applications, financials, and data integrity. This chapter focuses on those Super-Admin-only responsibilities — for daily dispatch work, see the Dispatcher Guide.

What you uniquely manage

AREA	WHY IT'S SUPER ADMIN ONLY
Users	Adding, removing, and changing account roles touches access control.
Applications	Hiring drivers and approving investors are commitments only leadership should make.
Investor records	Tied to financial agreements and ownership stakes.
Drivers directory	The carrier database that financials and revenue attribution depend on.
Trucks & trailers	Fleet assets — additions, removals, and assignments.
Invoices	Approval flows are an audit-relevant moment.
Financials	The company P&L; not for general visibility.
Data Manager & Admin Tools	Direct sheet edits and data-integrity scans.
Archive	Historical records, mostly for reference.

Managing users

Open **Users** in the sidebar. You'll see every user account with their role, the company they're associated with (for Investors), and the driver record they're linked to (for Drivers).

To add a user:

1. Tap **Add User**.
2. Pick a **Role** (Super Admin, Dispatcher, Driver, Investor).

3. Fill in **Username** (used to sign in) and a **Password** (the user changes it after first sign-in).
4. For Drivers: pick the corresponding **Driver** record from the drivers directory so the user account links to their dispatch identity.
5. For Investors: pick the **Carrier Name** the investor will own — this controls which loads count toward their earnings.

Save. The user can now sign in with the username and password you set.

To **change a user's role**, open their row, edit, and save. Changing a role triggers a sign-out — the user must sign in again, and the next session reflects the new permissions.

To **reset a password**, open the user and use the **Reset Password** action. You set the new temporary password and share it with the user.

To **delete a user**, use the row's **Delete** action. The user can no longer sign in; their historical activity (loads they ran, expenses they logged) remains in the data.

Reviewing driver applications

Open **Applications** in the sidebar. Each row is a pending driver application submitted via the public form. Click into one to see:

- Personal info (name, address, contact).
- Driving history (years experience, accidents, violations).
- Certifications (CDL class, endorsements, medical card).
- References.
- Prior employment.

Action buttons:

- **Approve** — creates a driver record, creates a user account, sends a welcome email with sign-in instructions, and triggers the onboarding flow on the driver's side.
- **Reject** — marks the application closed.
- **Download PDF** — a clean PDF of the full application (useful for records or printing for offline review).

Tip. Before approving, review the references and the carrier database to check for prior employment. The **Drivers** screen has every driver we've worked with, including historical carrier moves.

Reviewing investor applications

Open **Investor Applications**. Investor applications come from the public investor wizard at `/invest`. Each shows:

- Personal or company information.
- Investment intent (how much capital, target truck count).
- Funding source.
- References.

Approve to create an investor record, then walk them through the onboarding flow (master agreement, vehicle lease, W-9). The investor signs each document electronically from their side; signed PDFs land in their permanent documents portal.

Once onboarding completes, the investor's dashboard activates and they start seeing earnings for the truck(s) they fund.

Approving invoices

Open **Invoices**. Each week's invoices are auto-generated from active loads and driver pay rules. Each invoice shows:

- The driver.
- The week covered.
- The loads included.
- Driver pay (calculated per the pay_type — daily rate or percentage of revenue).
- Adjustments, if any.
- Total.

A submitted invoice is **Pending Approval** until you act on it. Open it, review, then:

- **Approve** — the invoice is marked paid (or scheduled for payment, depending on your downstream payment process).
- **Reject** — back to the driver/dispatcher to correct.

Approved invoices generate a final PDF for the driver's records.

The financials dashboard

Open **Admin** → **Financials**. This is the company P&L view, Super Admin only.

You'll see:

- **Revenue** — broken down by month, by truck, by driver.
- **Expenses** — fuel, repairs, fixed costs (insurance, ELD, IRP, HVUT), driver pay.
- **Net profit** — per month and cumulative.
- **Per-truck profitability** — which trucks are paying off and which aren't.

The numbers exclude cancelled and soft-deleted loads — the same exclusion rule that applies to the dispatcher dashboard and the investor dashboard, so all three views agree on what counts as a live load.

Revenue is recognized in the month a load is **assigned**, not the month it's delivered. This matches how the dispatcher dashboard reports revenue, so monthly totals line up across views.

Data Manager

Open **Data Manager** in the sidebar. This is a direct editor for the underlying Google Sheets — every tab, every row, every column. Useful for:

- Correcting a typo in a column that doesn't have a dedicated UI.
- Backfilling a column for old rows.
- Inspecting raw values when something looks off elsewhere.

Use carefully. A row edit here writes directly to the production sheet. There's no undo. If you're going to make a sweeping change, consider running it during low-traffic hours, and have the **Archive** screen open as a reference point.

Admin Tools

Open **Admin** → **Tools**. This screen has several data-integrity scanners:

- **Scan duplicates** — finds rows with the same Load ID in the sheet. Lets you pick the canonical row and remove the others.
- **Scan driver mismatches** — finds loads where the driver name doesn't match anything in the drivers directory (often a typo).
- **Scan orphans** — finds records that point to nothing (e.g., a load assigned to a deleted driver).

- **Scan stale locations** — finds drivers whose GPS hasn't updated in a long time.
- **Fix driver name** — rename a driver across every sheet that references them, in one operation.

Run these periodically — say, once a week — to keep the data clean.

Soft-deleting a load

Sometimes a load needs to disappear from every active view without removing it from the sheet for audit reasons. From **Active Loads** (or the Data Manager), find the load and use the **Delete** action. Super Admin only.

The load:

- Stays visible in the Google Sheet for record-keeping.
- Is filtered out of the dashboard, financials, and investor dashboard.
- Can be restored by removing its row from the `deleted_loads` table (a developer task — ask technical support if needed).

Cancelling a load

Cancelling is different from deleting. A cancelled load:

- Has its status set to **Cancelled**.
- Drops out of every revenue calculation via the standard exclusion logic.
- Is still visible on the dashboard (in the Completed or All Loads tabs depending on filters) so the cancellation is auditable.

Per a 2026-04-19 client decision, only Super Admins can cancel a load. Dispatchers who need a load undone should escalate to a Super Admin or, for a simple swap, use the driver reassignment dropdown.

The archive

Open **Archive**. This is a read-only window into the historical archive spreadsheet — loads, drivers, and other data that predate the current production sheet. Useful when you need to look up a long-completed load that no longer appears in the dispatcher dashboard.

Edits to the archive are not supported through the UI; it's view-only.

Common situations

"I approved an application but the new user can't sign in." Check that the welcome email arrived — sometimes it lands in spam. If the user has the credentials but still can't sign in, reset their password from Users.

"An invoice has the wrong driver pay total." Check the load dates the invoice covers and the driver's pay_type. Owner-operator pay is a percentage of revenue; standard driver pay is daily. If the math looks off, it usually means a load was attributed wrong — fix the load's driver assignment in Data Manager and re-generate the invoice.

"Financials don't match what I expect." Verify the `exclUdeDroppedLoads` filter — cancelled and soft-deleted loads are excluded. If a load was cancelled in error, restore its status and the numbers update.

"A scan-duplicate result has loads I want to keep distinct." The dedup default keeps the bottom-most (most recent) row. If two rows are genuinely distinct loads with the same ID, that's a data-entry mistake — re-key one of them with a unique ID before letting the deduper run.

"An investor says their earnings dashboard is wrong." Check three things in order: (1) the investor's user account's company_name matches the carrier name on their drivers' records; (2) the Owner ID column on the relevant loads matches the investor; (3) no relevant loads are accidentally cancelled or soft-deleted.

Investor Guide

Your dashboard shows the performance of every truck you fund: how much it earned, what it cost to run, and what's left for you. This chapter walks through every section so you know what each number means and how to read it.

Where you land

After you sign in, you go straight to the **Investor Dashboard** at `/investor`. There is no sidebar — your dashboard is your home and your destination. You can also reach **Trucks** to see fleet-level details for the trucks you own.

The dashboard starts with a **hero header** showing your photo, your name, and a **Performance overview** subtitle. From here you can:

- Choose a date range from the picker on the right.
- Tap **Download Report** to get a PDF for the date range you've selected.
- Tap **Refresh** to force-reload the data (it auto-refreshes when relevant events happen, so this is rarely needed).

Earnings section

This is the section most investors look at first. It shows your earnings for a single month with a full breakdown of how the number was calculated.

At the top, a **month selector** lets you flip between months. The current month is shown by default.

A large card shows **Your Earnings** for the selected month — your 50% share of the net profit on your fleet for that month. Below that, a breakdown table explains the math:

Revenue (from completed loads)	\$XX,XXX
- Driver Pay	(\$X,XXX)
- Fixed Costs (per truck × month)	(\$X,XXX)
- Trip Expenses (fuel, repairs, etc.)	(\$X,XXX)
= Net Profit	\$XX,XXX
÷ 2 (your half)	\$XX,XXX

Beneath that, an **all-time totals** strip shows lifetime revenue, lifetime expenses, lifetime net profit, and your lifetime earnings.

How each number is calculated

- **Revenue.** The total payment amount for every load assigned to a truck you own during the month. Loads that were cancelled or removed are excluded. A load counts in the month it was **assigned**, not delivered — this matches how dispatch reports revenue, so the numbers line up.
- **Driver Pay.** For drivers on a **daily rate**, this is \$250 (or whatever rate is configured) times the number of unique calendar days the driver was active on your loads. Multi-day trips count every day they spanned. Multiple loads in one day count as one day. For drivers on an **owner-operator** pay type, this is a percentage of revenue per the agreed split.
- **Fixed Costs.** The monthly portion of insurance, ELD service, IRP, HVUT, and the maintenance fund for each truck you own. Fixed costs only accrue for months the truck has actually existed in your fleet — they don't backdate.
- **Trip Expenses.** Fuel, tolls, weight tickets, repairs, and any other variable expense logged against one of your trucks for the month.
- **Net Profit.** Revenue minus all expenses.

- **Your Earnings.** Half of net profit, by your management agreement.

Fleet breakdown section

This section shows every truck you own as a card. Each card has:

- The truck number and basic info (make, model, year).
- Current status — Active (assigned to a driver), Available (idle, no driver), Maintenance.
- Currently-assigned driver.
- A small summary of this month's revenue for that truck.

Click into a truck card for the full truck record: VIN, mileage, last inspection, document list, and historical drivers.

Production section

Three numbers that summarize how hard your fleet is working:

- **Miles driven** — total miles across your trucks for the selected period.
- **Loads completed** — count of delivered loads.
- **Utilization** — percentage of the period your trucks were on active loads vs. idle. Higher is better.

These tell you whether your investment is generating activity. A truck that earns well but only because it ran a few high-rate loads has different long-term implications than a truck that earns well by staying busy.

Cash flow section

A line chart showing revenue over time. Use it to:

- Spot trends — is revenue growing month over month?
- See seasonal effects — your sector likely has slow and busy periods.
- Compare against expectations — is this month tracking like prior months?

Asset section

Your trucks listed as assets with acquisition dates and book values. Useful for tax planning and equity discussions.

Documents portal

Every document you've signed during onboarding and every document the company has shared with you specifically. Common documents include:

- **Master Participation & Management Agreement** — the umbrella contract.
- **Vehicle Lease** — per-truck lease.
- **Exhibit A** — vehicle specification (one per truck if you have multiple).
- **W-9** — your tax form.
- **Monthly reports** — historical PDFs of the report you've downloaded.

Tap any document to view inline. Tap the download icon to save a copy.

Messages

Direct chat with the LogisX operations team. Use it for:

- Asking about a specific number you don't understand.
- Reporting that a truck is offline or having issues.
- Requesting a new document or report.
- Anything else that needs an answer from the team.

Messages are response within business hours.

Downloading a report

Use the **Download Report** button in the hero header. Pick a date range (a single month, a custom range, or all-time) and tap **Download**. The system generates a PDF showing:

- Cover page with your name, the period, and the date.
- Revenue breakdown per truck.
- Driver pay summary.
- Fixed costs by category.

- Trip expense summary.
- Net profit calculation.
- Per-load detail (every load that contributed to the period's revenue).

This is the report you'd share with your accountant or use to reconcile with a check or bank statement.

Trucks tab

Open **Trucks** from the dashboard's secondary nav. You see only the trucks you own. Click into a truck for everything we know about it — VIN, plate, registration expiry, insurance card, last inspection date, mileage, current driver, document list.

This is the right place to verify a truck's documents are current or to look up a registration number when an officer asks.

What you can do and what you can't

You **can**:

- View earnings and reports for your fleet.
- Download monthly or custom-range reports.
- View and download all your signed documents.
- See current truck status and assigned drivers.
- Message the operations team.
- Update your profile photo and notification preferences.

You **cannot**:

- Edit a load's details, driver pay, or expenses.
- See data for trucks you don't own.
- Access financials for the company as a whole.
- Approve or reject operational decisions.

Your read-only access is by design — it lets you trust the numbers without being responsible for the daily operation.

Common situations

"My monthly earnings show \$0 but I know my truck has been running." Three things to check. First, your account's company name (in your profile) should match the carrier name on your truck's records. Second, the Owner ID on the loads should match your investor record. Third, make sure no recent loads were cancelled. If any of these look wrong, message operations.

"The monthly view and the all-time view don't add up exactly." The most common cause is loads with incorrect pickup/dropoff dates in the sheet — they may count as active days for all-time but not for a specific month (or vice versa). Message operations with the specific month and we can correct the dates.

"I see a fixed cost line on a truck I haven't had for that long." Fixed costs should only accrue for months the truck has been in your fleet. If they appear earlier than that, the truck's acquisition date may be set wrong. Message operations to check.

"I want to see the per-load detail for a single month." Download the report for that month — the PDF includes a per-load section showing every load, its driver, its revenue, and the date.

"I can't find a document I signed." Check your Documents portal first; signed docs land there after the signing flow completes. If it's truly missing, message operations — the master copy is also stored on our side and can be re-attached to your portal.

"My profile photo is outdated." Open your profile (top of the dashboard) and use the photo upload to replace it.

Public Workflows

Three things in LogisX require no account: applying to drive, applying to invest, and tracking a load as a customer. This chapter walks through each.

Applying as a driver

Anyone with a CDL can apply to drive for LogisX by going to apply.logisx.com (or app.logisx.com/apply). The application is a single multi-step form. Your progress is shown in a sidebar so you can see where you are.

The screenshot shows the LogisX Driver Application interface. On the left is a dark sidebar with the LogisX logo and a list of five steps: 1. Personal Info (selected), 2. Experience, 3. Driving History, 4. Certifications, and 5. References. The main content area is titled 'STEP 1 OF 5 Personal Info' with the subtitle 'Basic details & documents'. Below this is a section 'Personal Information' with the instruction 'Please provide your basic details'. The form contains several input fields: First Name (John), Last Name (Doe), Email Address (you@email.com), Phone Number ((555) 555-5555), Cell Number ((555) 555-5555), Date of Birth (mm/dd/yyyy), Current Address (a text field with a location pin icon), City (City), State (ST), ZIP (12345), Social Security Number (SSN) (XXX-XX-XXXX), Drivers License Number (License number), DOT # (optional) (Only if Owner Operator), MC # (optional) (Only if Owner Operator), and Hazmat Endorsement. At the bottom left of the sidebar, it says '© 2026 LogisX Inc.'.

The steps:

1. **Personal info.** Full name, email, phone, date of birth, address. The address field uses autocomplete — start typing and pick the matching result so the city, state, and ZIP fill in correctly. If you're applying from your phone and the form offers a **"Use my location"** button, you can tap it to skip typing your address.

2. **Driving history.** Years of CDL experience, types of equipment you've driven (dry van, reefer, flatbed, etc.), and any accidents or violations in the last few years. Be honest — discrepancies between what you report and what the FMCSA Clearinghouse shows will surface during onboarding.
3. **Certifications.** Your CDL class, endorsements (Hazmat, Tanker, etc.), and current medical card status.
4. **References.** Two or three professional references — usually a former supervisor at a prior carrier, ideally someone we can reach by phone.
5. **Prior employment.** A list of your previous carriers, with dates and reasons for leaving.

When you submit, the application is sent to the LogisX team for review. You'll receive an email confirming receipt. If accepted, a second email follows with your sign-in credentials and a link to start onboarding.

The whole submission takes about 10–20 minutes if you have your CDL, medical card, and prior carrier info handy.

Applying as an investor

To apply for investment in the LogisX fleet, go to app.logisx.com/invest. The application is a multi-step **wizard** with a visual progress indicator, guided highlights, and conditional sections that appear based on your earlier answers.

LogisX Guide
YOUR ONBOARDING BUDDY

STEP 1 4%

Welcome to LogisX

Hi! I'm your guided assistant. I'll walk you through becoming a LogisX truck investor in about 10 minutes. There are 3 steps: your application, your trucks and documents, then your banking. You can pause anytime — everything auto-saves.

What is LogisX?

How long will this take?

Back Skip Next →

The high-level steps:

- 1. Personal or company information.** If you're investing as an individual, fill in your name and contact info. If as a company, fill in company name and your role.
- 2. Investment details.** How much capital you intend to deploy and how many trucks you target. This is non-binding — it helps the team plan the conversation.
- 3. Legal agreement.** Read the high-level terms of the LogisX Master Participation & Management Agreement (the same agreement you'll later sign as part of onboarding). Acknowledge that you've read it.
- 4. Funding source.** Where the capital will come from — personal savings, business funds, financing, etc.
- 5. References.** Optional, but helpful. A banker or accountant who can vouch for you accelerates the review.

Submit and the application lands with LogisX leadership. If you're accepted, you'll be invited to onboarding — a separate signing flow for the formal documents (Master Agreement, Vehicle Lease, W-9). After onboarding, your investor dashboard activates and you begin seeing earnings as your fleet runs loads.

Tracking a load as a customer

If you're a broker or shipper with a load running with LogisX, you can track it without an account. Go to app.logisx.com/track. You'll see a simple search box.

Enter the **Load ID** (e.g., [LD-1234](#)) and tap **Track**. If the load exists, you see a tracker page with:

- **Current status** — Dispatched, In Transit, At Receiver, Delivered, or similar.
- **Live location** on a map (updated as the truck reports GPS).
- **Estimated time of arrival** at destination, with an on-time/delayed indicator.
- **Pickup and delivery addresses** — city, state, ZIP.
- **Truck unit number** — useful for security at the delivery facility.

The tracker does **not** show:

- Driver name or phone.
- Broker name or contact.
- Rate or any financial info.
- Internal notes.

This is intentional — the tracker is for the customer's reasonable awareness of their load, not for the rest of the operational detail.

If you get a "Load not found" message, double-check the Load ID for typos. If the ID is correct but the load isn't found, contact LogisX dispatch — the load may not be in the system yet, or it may have been completed and rolled out of the tracker.

Sharing the tracking link

If you're forwarding the tracking link to a final customer or a yard, just send the URL — anyone with the link can access the tracker. Once the load is delivered, the page shows the final delivered status and remains accessible for reference.

There's no requirement to "check in" or refresh — the page updates automatically.

Why these flows are public

Three different audiences, three different reasons:

- **Driver application** is public because we want to be findable when a driver is looking for a job. Requiring an account just to ask "are you hiring?" is a barrier.
- **Investor application** is public for the same reason — discovery is the bottleneck for new investor relationships.
- **Customer tracker** is public because the customer doesn't have, and shouldn't need, an account in our system. Trying to gate it would force us to issue credentials to every broker on every load — a maintenance nightmare for everyone.

Each public flow is rate-limited and (where relevant) scrubbed of sensitive data, so going through them carries the same security posture as any other public web form.

Troubleshooting

This chapter collects the most common issues across all roles and how to handle them. If your problem isn't here, see the FAQ chapter or contact your support person.

Sign-in issues

"I can't sign in. The page says my credentials are wrong." Double-check that **caps lock is off** and that the username is spelled exactly as your administrator set it (case-sensitive). If you've recently changed your password and now can't sign in, the new password may not have saved — ask your admin to reset it again.

"The sign-in page just refreshes and doesn't sign me in." Your browser is probably blocking cookies. LogisX requires cookies enabled for session management. Open your browser's privacy settings and allow cookies for `app.logisx.com`.

"I've been kicked out and need to sign back in." Sessions time out after a period of inactivity. This is expected. Just sign back in.

"After several wrong password tries, I'm locked out." A brute-force protection kicks in after too many failed attempts. Wait 15 minutes and try again, or ask your admin to reset your password.

Page-loading issues

"The page is blank or shows 'something went wrong'." Refresh the page (Ctrl+R or Cmd+R). If that doesn't help, sign out and sign in again. If the issue persists across sessions, your administrator can check whether the system itself is having problems.

"The dashboard loads but the numbers look wrong." The dashboard refreshes automatically on events. If a recent change isn't reflected, tap a different tab and back to force a re-fetch. If numbers are still off, the underlying sheet may have a duplicate row or a date error — escalate to a Super Admin to run a duplicate scan.

"The map doesn't load." The map needs the Google Maps API to work. If it doesn't load, your network may be blocking Google's servers, or the API key may have expired. Refresh; if it still doesn't load, contact technical support.

Driver-specific issues

"My GPS shows the wrong location." First, make sure the driver tab is actively open in your browser (GPS pauses if you close the tab). If position is still wrong after a moment, your phone's GPS may need to acquire satellites — stand still outside for 30 seconds and check again.

"My status didn't auto-update when I arrived." The geofence is generous (~500 m) but it isn't perfect. Tap the next status in the stepper manually and give a brief reason. This is normal — auto-advance covers most cases but never claims 100%.

"I uploaded a POD but the system says it didn't upload." Try once more. If it keeps failing, your cell signal may be too weak for the upload. Move to a stronger signal area or use Wi-Fi. As a fallback, you can text or email the POD to dispatch.

"I accepted a load but it disappeared from my list." The load may have been reassigned or cancelled. Pull-to-refresh on the Loads tab. If still missing, message dispatch.

"The expense OCR read my receipt wrong." Edit the fields before saving. The OCR is a convenience, not a requirement. If it's consistently wrong on a vendor (e.g., always misreading a specific truck stop's receipts), let dispatch know so the issue can be flagged.

Dispatcher-specific issues

"A driver isn't responding to a load assignment." Check their position on the tracking map. If their phone shows offline (no recent GPS report), they may not have signal. Message them; if you still don't hear back within a reasonable window, reassign the load to a different driver.

"A POD doesn't appear in the load even though the driver says they uploaded." Refresh the load detail. If still missing, ask the driver to retry. Failed uploads sometimes look successful on the driver's side. If it keeps failing, get the POD by text/email and upload it yourself.

"The job board shows a load that shouldn't be there." The load may have a typo'd Load ID that created a duplicate. Open the load — if it duplicates another, ask Super Admin to run the duplicate scan and merge.

"A driver's name shows wrong on a load." The Carrier Database is the source of truth for driver names. Find the load in Data Manager and either correct the driver field or, if the entire name is wrong (typo across all loads), use the Admin Tools' **Fix Driver Name** action.

Super Admin issues

"An invoice has the wrong driver pay." Check the driver's pay_type. Owner-operators are paid as a percentage of revenue; standard drivers are paid by active days. Check the load dates the invoice covers — if a load spans a date with a different pay rate, you may need to manually adjust.

"Cancelling a load didn't remove it from financials." Cancellations are filtered out by the standard exclusion logic. If the load is still showing in financials, check the load's actual status — if it says "Cancellation Pending" or similar instead of "Cancelled", the exclusion regex didn't match. Set the status to exactly "Cancelled" and the load drops out.

"A scan-orphans result has loads I want to keep." An orphan is a record pointing to nothing — usually a load with a deleted driver. Re-link the load to a current driver in Data Manager and re-run the scan. If the load is legitimately a no-driver placeholder (e.g., a load entered before assignment), the scanner is being overzealous; you can ignore the result.

Investor-specific issues

"My earnings show \$0 for a month I know my fleet was running." Three things to check, in order. (1) Your account's company name should match the carrier name on your truck's records exactly. (2) The Owner ID column on the loads should match your investor record. (3) None of your loads should be cancelled or soft-deleted.

If all three look right and earnings are still \$0, message operations with a specific load ID — we'll trace the join from there.

"The monthly view and all-time view disagree." Some loads in your fleet may have incorrect pickup or dropoff dates in the sheet, which causes them to count for all-time but not for a specific month (or vice versa). Message operations with the month in question and we'll review the dates.

"I want a custom report that the standard report doesn't show." Use the **Download Report** button with a custom date range. The PDF includes per-load detail. If you need a different cut (per-driver, per-truck), message operations.

Browser and device issues

"The app looks broken on my phone." First, refresh. If it still looks broken, you may be on a very old browser version. Update your browser to the latest version.

"The driver tab logs me out when my screen turns off." This is a phone OS behavior — iOS and Android both background and eventually suspend tabs after the screen has been off for a while. The session itself doesn't expire that fast; the tab is just sleeping. Open the tab and you should be signed back in. If you weren't, your session truly expired — sign in and pin the tab.

"The PDF I downloaded is corrupted." Try the download again. If it's a generated PDF (invoice, report, application), the generator may have rendered partially. If it's a stored document (a signed agreement), the file may have been replaced — refresh the page and try again.

When to escalate

If none of the above resolves your issue:

- **Drivers** — message dispatch.
- **Dispatchers** — escalate to a Super Admin.
- **Super Admins and Investors** — contact LogisX technical support.

Have the following ready when you escalate: what role you are, what you were trying to do, what you saw instead, and (if relevant) the exact load ID or user ID involved.

Frequently Asked Questions

The questions that come up most often, across all roles. Skim for the one that matches yours.

General

Q. What does LogisX do? LogisX is the dispatch and fleet management platform that connects brokers, drivers, dispatchers, investors, and customers around the movement of freight. Brokers email loads, the system parses them, dispatchers assign drivers, drivers run the loads with live GPS tracking, customers track their freight, investors see the earnings on the trucks they fund.

Q. Do I need to install anything? No. LogisX runs entirely in a web browser. The driver app is optimized for phones; the dispatcher and admin views work best on desktop or tablet.

Q. Does it work offline? Not currently. The app needs a network connection for everything but caching small amounts of locally-typed text that can be re-sent when signal returns.

Q. What data does LogisX collect about me? For drivers, your GPS location while the driver tab is open, the loads you run, status updates you make, expenses you log, and messages you exchange with dispatch. For everyone, basic account info and your activity within the app. Investors additionally see financial data scoped to their fleet. The app does not sell, share, or use this data for anything other than running the dispatch operation.

Sign-in & accounts

Q. I forgot my password. LogisX doesn't have a self-service password reset. Contact your administrator — for drivers that's dispatch, for everyone else it's your operations lead.

Q. Can I have two accounts on different devices? Yes, the same account can be signed in on multiple devices simultaneously. All actions sync.

Q. Can I share my account with a coworker? No. Each user should have their own account so actions are attributable. Ask your admin to create one.

Q. Can I change my username? Not from the app. Ask your admin to do it.

Drivers

Q. Why does the app ask for my location? GPS reporting is how dispatch knows where you are, how the geofence auto-advances your status, and how the customer's tracking link shows your live position. Without it, none of those work, and dispatch has to call you for an update.

Q. Does the app track me 24/7? No. The driver tab reports your position only while it's open. Close the tab — no reports. The 50-meter movement threshold also means we don't flood the server with reports while you're parked.

Q. Why does the status sometimes auto-update and sometimes not? The geofence works most of the time, but GPS in dense urban areas, parking lots, or close to large buildings can be unreliable. When auto-update misses, you can update the status manually from the Loads or Status tab.

Q. How is my pay calculated? For most drivers, it's a daily rate times the number of unique calendar days you were active on a load. A multi-day load (Monday pickup, Wednesday delivery) counts every day. Two loads on the same day count as one day. For owner-operators, pay is a percentage of the load revenue. Your administrator can tell you which rate applies to you.

Q. Why is an invoice showing wrong? Two common reasons: the `pay_type` on your account doesn't match the rate that was actually used, or a load's dates in the sheet are wrong, which changes the active-day count. Message dispatch with the invoice number.

Q. Can I see other drivers' loads? No. You see only your own work.

Dispatchers

Q. Why can't I cancel a load? Per a 2026-04-19 client decision, cancellation is restricted to Super Admins. You can reassign loads to a different driver, but final cancellation requires escalation.

Q. How do I add a new driver? Drivers come from approved applications. Send them to the public driver application form ([/apply](#)), then Super Admin approves the application, which auto-creates the driver record and user account.

Q. Why are some driver names case-different in the sheet vs. the dashboard? Driver matching is case-insensitive. The system handles "LESLINE JOHNSON" and "Lesline Johnson" as the same driver. If you see a driver showing in two places under different spellings, that's a data-entry issue — escalate to a Super Admin to run **Fix Driver Name** to merge them.

Q. Does the system warn me before I assign a driver who's already on a load? A driver can't transition into an active status (At Shipper, Loading, In Transit, At Receiver) if they already have a load in one of those statuses — the system blocks the change with a 409 Conflict. Assignments themselves don't block; you assign and the driver decides whether to accept.

Q. How do customers track their load? Each load has a public tracker URL. Open the load, tap **Copy tracking link**, and send the URL to the customer. They can refresh it freely without affecting the rest of the system.

Super Admins

Q. How do I delete a load without losing the audit trail? Use **Delete** on the load. This soft-deletes — the row stays in the Google Sheet for the record, but the load drops out of every operational view.

Q. How do I undo a soft-delete? Soft-deletes are reversible by removing the row from the `deleted_loads` SQLite table. That's a developer task — contact technical support.

Q. How is revenue calculated in financials? Revenue counts in the month a load was **assigned**, not delivered. This matches the dispatcher dashboard and the investor dashboard, so all three views agree on monthly totals.

Q. Why is a scan-duplicate result showing two loads that are clearly different? Two loads with the same Load ID look like duplicates to the scanner. Re-key one of them to a unique ID in Data Manager.

Q. Can dispatchers see the financials dashboard? No. The financials dashboard is Super Admin only. Dispatchers see the operations dashboard, which shows revenue at a high level but not the cost breakdown.

Investors

Q. How is my earnings number calculated? For each month: revenue minus driver pay minus fixed costs (insurance, ELD, IRP, HVUT, maintenance fund) minus trip expenses (fuel, repairs, tolls) equals net profit. You get half of net profit by the management agreement.

Q. Why doesn't my earnings dashboard match the report PDF I downloaded? The dashboard and the report should match. If they don't, take a screenshot of both and message operations — the most common cause is the dashboard refreshing mid-update.

Q. Can I see who's driving my truck? Yes — the Fleet Breakdown section shows the currently-assigned driver per truck. The investor dashboard does not show driver contact info or financial details about the driver, just the assignment.

Q. Can I download historical reports? Yes — use the date range picker in the hero header. Pick the period you want and tap **Download Report**.

Q. Will my reports include every load? Yes. Reports include a per-load detail section showing every load that contributed to revenue in the period.

Q. How do I increase my fleet? Message operations. Adding a truck is a process — agreement updates, vehicle lease, possibly capital movement — that's handled by leadership directly.

Customers (public tracker)

Q. What is the URL for the tracker? You should have received the URL from your broker or LogisX dispatch. The format is `app.logisx.com/track/LD-XXXX`. If you only have the Load ID, you can also go to `app.logisx.com/track` and enter the ID in the search box.

Q. The tracker says my load isn't found. Double-check the Load ID. If it's correct, the load may not have been entered into LogisX yet, or it may have been completed and rolled out of active tracking. Contact LogisX dispatch.

Q. The location hasn't updated in a while. The driver's phone may have lost signal. The tracker shows the last-update time so you can tell if the position is stale. If it's been hours, contact LogisX.

Q. Can I see the driver's contact info? Not on the tracker. The tracker shows only what's appropriate for a customer view. If you need to reach the driver, contact LogisX dispatch.

Q. Will the tracker work after delivery? Yes — the page shows the final delivered status and stays accessible for reference.

Technical (everyone)

Q. Why is the system sometimes slow? The system reads from Google Sheets, which has a quota and occasionally returns slower-than-usual responses. We cache aggressively to mask this, but a slow response from Google can still bleed through to the UI. Usually resolves in seconds.

Q. Does the system support multiple companies? Currently, no. LogisX is a single-tenant deployment for LogisX Inc. Multi-tenancy would require a different architecture.

Q. Will I get notified by email when something happens? Some things, yes — driver application approvals, investor onboarding milestones, password resets. Day-to-day operations (load assignments, status changes) happen entirely inside the app; you'll see them on the relevant screen the moment they happen.

Q. Can I export data to Excel? Several screens have a download button that produces a PDF or CSV. For sheet-level data, Super Admins have direct access via Data Manager and can copy/paste from there.

Q. Is the app secure? The standard web-security baseline: HTTPS-only, session cookies marked `httpOnly` and `secure`, brute-force protection on sign-in, rate limiting on public endpoints, role-based access control on every protected route, sensitive data scrubbed from responses to roles that shouldn't see it.

Q. Where can I read the technical documentation? A companion **Technical Documentation** PDF covers the architecture, API, database schema, integrations, deployment, and operations. Ask your administrator or technical team for a copy.
