

FOR DRIVERS

Driver Guide

Everything a LogisX driver needs to know — from your first sign-in and onboarding to running loads, reporting status, uploading proof of delivery, and getting paid.

Contents

01	Welcome	What this guide covers How to use this guide Who this guide is for What you'll need What you don't need A note on safety

04	Phone Setup	Choose the right browser Bookmark the app Grant location access Keep the tab alive Save battery Data usage Notifications What to do if the app feels slow Multiple devices
05	Running a Load, Start to Finish	When a new load lands What happens when you accept

- Driving to pickup
- Arriving at the shipper
- At the shipper
- Leaving the shipper
- On the road
- Arriving at the receiver
- Getting the BOL signed
- Uploading POD
- Done
- What happens after

06 Status, GPS, and Geofencing

- The status flow
- How statuses change
- The geofence
- When the geofence works perfectly
- When the geofence misses or misfires
- Updating status manually
- The "one active job" guard
- GPS reporting cadence
- GPS accuracy
- What dispatch sees
- What happens if your phone dies
- Pro tips

07 Uploading Proof of Delivery

- What counts as a POD
- When to upload
- How to take a good POD photo
- The upload step by step
- Multi-page PODs
- What happens after upload
- When the upload fails
- When the photo is bad
- What if you forget to upload?
- Some receivers' quirks

08 Logging Expenses

- What to log

- How to log an expense
- Using the photo + AI
- Photographing receipts
- Fuel receipts have extra fields
- After you save
- What you cannot do
- Cash vs. card
- When you didn't get a receipt
- Tips

09 Messaging Dispatch

- The basics
- When to message vs. call
- Per-load messages
- Attaching photos
- Response times
- Tone
- What dispatch can do for you
- What dispatch can't do for you
- Reading messages while driving
- A note on the broader Notifications tab
- A few good habits

10 Truck Documents on Your Phone

- What you'll find in the Kit tab
- How to view a document
- What to do at a roadside inspection
- When you're reassigned to a different truck
- When the truck has no driver-visible documents
- Inspector tip
- Document expiration
- Other phones, other accounts
- Shared documents
- Pro tip

11 Getting Paid

- The pay structure
- The weekly invoice
- Invoice statuses

When you get paid
What to do if your invoice looks wrong
Adjustments
Direct deposit setup
Tax forms
Keeping good records
Pay disputes — escalation

12 Driver Best Practices

Final thought

13 Troubleshooting

"I can't sign in."
"My password worked yesterday but doesn't today."
"The page is blank."
"I see the 'Location Access Required' screen but I'm sure I granted location."
"My GPS shows the wrong location."
"I'm at the shipper but the status didn't auto-advance."
"I'm not at the shipper but the status auto-advanced anyway."
"I declined a load by accident."
"I accepted a load and it disappeared from my list."
"I uploaded a POD but the system says it didn't upload."
"The POD upload says 'success' but dispatch can't see it."
"My expense OCR read the receipt wrong."
"The expense form won't let me save."
"My invoice is missing a load I ran."
"My pay total looks wrong."
"The map doesn't load."

"I lost cell signal and now my updates didn't go through."
"I closed the tab and now nothing is updating."
"My phone died, came back up an hour later, app is acting weird."
"Dispatch isn't responding."
"I think the app crashed."
"Something is wrong that's not in this list."
When to escalate

14 Frequently Asked Questions

About the app itself

About documents
About expenses
About messaging
About onboarding
About safety and HOS
About the company
Things drivers don't usually ask but should

Welcome

You've been hired to drive for LogisX. This guide is everything you need to know to use the LogisX app on the road — from your very first sign-in through your hundredth delivered load.

What this guide covers

The chapters that follow walk you through:

- **Getting started** — signing in, what to expect on day one, the layout of the driver app.
- **Onboarding** — the documents you sign before you can run loads, plus the drug test, FMCSA permission, and training.
- **Phone setup** — which browser to use, granting location access, keeping your tab alive, saving battery.
- **Running a load** — the full workflow from accepting an assignment to delivering and uploading your POD.
- **Status, GPS, and geofencing** — how the app tracks where you are and updates your status automatically.
- **POD uploads** — how to photograph and submit proof of delivery.
- **Expenses** — logging fuel, repairs, tolls, scale tickets, and how the receipt-photo AI helps you.
- **Messaging dispatch** — when to call, when to message, how to attach photos.
- **Truck documents** — viewing your registration and insurance during a roadside check.
- **Getting paid** — reading your weekly invoice and what to do if something looks wrong.
- **Best practices** — driver etiquette, common-sense tips that keep dispatch happy and the wheels turning.
- **Troubleshooting and FAQ** — every weird thing you might hit, and how to handle it.

How to use this guide

Read it once cover to cover when you start, then keep it on your phone as a reference. The chapters are short and self-contained — you can jump to one and not feel lost.

Each chapter ends with the actions you'll actually do. Skim those first if you want the punchline.

Who this guide is for

You. The driver. The person actually behind the wheel.

This guide is not for dispatchers or admins — they have their own. It's written assuming you have a CDL, a phone, and not much patience for tech jargon. We explain things in plain language and only call out the technical detail when it matters.

What you'll need

- A working **CDL** and current medical card.
- A **smartphone** — Android or iPhone, fairly recent (the app needs a modern browser).
- A **data plan** that works in most of the country (the app talks to the server in short bursts; it doesn't stream video or anything heavy).
- An **email account** you check regularly — that's where your sign-in credentials and important updates come.

What you don't need

- A specific app installed from the App Store or Google Play. **LogisX runs in your phone's web browser.** You just go to the URL.
- Any special skill beyond reading and tapping.
- A separate tablet or laptop — your phone is the primary device.

A note on safety

You'll be using this app while running over-the-road. Two things matter more than anything in this manual:

1. **Pull over before doing anything that takes more than a quick tap.** Reading messages, uploading PODs, logging expenses — all of these can wait until you're parked.
2. **Dispatch knows your truck has GPS.** If something happens — an accident, a breakdown, a delay — call dispatch before you do anything else. The app is not a substitute for the phone call.

The rest of the manual will help you do your job better. Safety helps you keep doing it.

Let's get started.

Quick Start

The shortest path from "I just got hired" to "I'm running my first load." This chapter is a summary. Subsequent chapters cover each step in more detail.

Day one checklist

1. **Get your credentials.** After your application is accepted, you'll receive an email from LogisX with your username and a temporary password. Check your inbox (and spam folder) for a message titled something like "Welcome to LogisX."
2. **Open your phone's browser and go to** app.logisx.com. Chrome on Android, Safari on iPhone. (Avoid old browsers — see the phone setup chapter for the full list.)
3. **Sign in.** Enter your username and the temporary password.
4. **Change your password.** From your profile, set a password you'll remember. Don't share it.
5. **Grant location access.** The browser will ask permission. Tap **Allow**. Without GPS, the app can't track loads.
6. **Complete onboarding.** You'll see a lock screen with a list of steps. Walk through each one — sign each document, complete the drug test (your administrator schedules it), enroll in FMCSA Clearinghouse, and finish any training.
7. **Wait for your first load assignment.** When dispatch assigns you, you'll get a notification and the load shows on the **Loads** tab.
8. **Accept the load.** Read the details, tap **Accept** if you can run it.
9. **Run the load.** Drive to pickup, status auto-advances when you arrive, drive to delivery, photograph the BOL when signed.
10. **Upload POD.** From the load screen, tap **Upload POD** and submit the photo.
11. **Done.** Status moves to "POD Received." Your dispatcher sees it instantly. Your invoice for the week includes that load.

That's the whole loop. The chapters that follow expand on each step.

The 5 tabs at a glance

Across the bottom of the app (or top on tablets) you'll see five tabs. This is your home base.

Location Access Required

LogisX needs your location so dispatch can track your progress and auto-update load status at pickup & delivery. You can't receive assignments without it.

Location is blocked for this site. Re-enable it:

iPhone Safari: tap the "aA" icon in the address bar → Website Settings → Location → Allow.

Android Chrome: tap the lock icon in the address bar → Permissions → Location → Allow.

Desktop: click the lock in the address bar → Site Settings → Location → Allow, then reload.

Turn on Location

Log Out

TAB	WHAT IT'S FOR
Loads	Your assigned and pending loads. New loads land here with Accept / Decline buttons. Accepted loads show route info, status, dates.
Status	Quick status update for the load you're currently working. Tap the next step in the stepper as you progress.
Alerts	Notifications — new load assignments, messages from dispatch, onboarding reminders, system messages.
Kit	Your truck's documents (registration, insurance, inspection) plus a place to log expenses , view your invoices , and upload POD photos .
Messages	Direct chat with dispatch. Type, send, attach photos.

Each tab shows a small numeric badge when something needs your attention. "Loads (1)" means you have one new load awaiting your action.

What does a load look like

When a load is assigned to you, you'll see a card on the **Loads** tab with:

- **Load ID** — a code like **LD-1234** that dispatch and brokers use to refer to this specific load.
- **Pickup** — city, state, ZIP, plus the date and appointment window.
- **Drop-off** — same for the delivery location.
- **Rate** — the pay for this load (may be displayed depending on your pay type — see Getting Paid).
- **Status** — Dispatched, In Transit, At Receiver, Delivered, etc.

If the load is brand-new, the card will have **Accept** and **Decline** buttons. Tap **Accept** to take it. Tap **Decline** if you can't (be honest — it's fine).

Once you've accepted, the buttons disappear and the card becomes a tap-to-open detail view with the route on a map, the broker reference, and the next action.

When something is wrong

If anything feels off — you can't sign in, your load is missing, your GPS is acting weird, the app shows a blank screen — your first move is to message dispatch. They can see your account, your loads, your truck assignment, and the full operational picture. They almost always know what's wrong faster than you can troubleshoot yourself.

If they can't help, they'll escalate. Don't sit on a problem.

Now turn the page and we'll walk through onboarding in detail.

Onboarding

Before you can run any loads, you have to complete onboarding. This is the company's way of making sure you've reviewed and signed all the agreements, completed required testing, and met FMCSA requirements. The app blocks everything else until onboarding is done.

The onboarding lock screen

The first time you sign in after your application is accepted, you'll see a full-screen panel listing your onboarding steps. You can't get past it to the Loads tab until everything is green.

Location Access Required

LogisX needs your location so dispatch can track your progress and auto-update load status at pickup & delivery. You can't receive assignments without it.

Location is blocked for this site. Re-enable it:

iPhone Safari: tap the "aA" icon in the address bar → Website Settings → Location → Allow.

Android Chrome: tap the lock icon in the address bar → Permissions → Location → Allow.

Desktop: click the lock in the address bar → Site Settings → Location → Allow, then reload.

Turn on Location

Log Out

Each step shows a status:

- **Not Started** — you haven't done it yet.
- **In Progress** — partially done.
- **Pending Admin** — you did your part; an administrator needs to verify or schedule something.
- **Complete** — done, fully signed off.

When every step is **Complete**, the lock disappears and the rest of the app becomes available.

Step 1: Sign onboarding documents

A list of documents appears on the lock screen. You'll typically sign:

- **Equipment Policy** — how you handle the truck and other company equipment.
- **Mobile Device Policy** — phone use and distracted-driving rules.

- **Substance Abuse Policy** — drug and alcohol testing rules.
- **Independent Contractor Agreement** — the master agreement governing your work with LogisX. This one is the longest and includes banking information for direct deposit.

For each:

1. **Tap the document.** It opens in your browser.
2. **Read it.** Yes, actually read it. These are legal documents you're committing to.
3. **Check the acknowledgment box** at the bottom. You're confirming you've read and agree to the terms.
4. **Type your full legal name** in the signature field. This is your electronic signature.
5. **Tap "Sign."** The app generates a signed PDF copy for the company's records and marks the step Complete.

You can re-open any signed document later to review the terms — it's stored in your **Kit** tab under Documents.

Note. If a document asks for banking info (the Independent Contractor Agreement does), have your routing number and account number ready. You'll need them for direct-deposit setup.

Step 2: Pre-employment screening (drug test)

Your administrator schedules a drug test at a local collection facility. The lock screen shows the appointment details once scheduled.

What you do:

1. **Show up at the collection site** at the scheduled time. Bring photo ID.
2. **Complete the test.** It's a standard urine sample for a 5-panel or 10-panel drug screen.
3. **Wait for the results.** Lab results typically take 24–72 hours.

You don't do anything in the app for this step. The administrator marks it Complete when the lab returns a negative result.

If the result is positive or there's a documentation problem, your administrator will reach out. Don't take it personally; the test exists because the FMCSA requires it.

Step 3: FMCSA Clearinghouse enrollment

The FMCSA Clearinghouse is a federal database that tracks driver drug and alcohol testing history. LogisX is required to query it before you can drive, and to query annually thereafter. You have to grant permission for queries.

What you do:

1. **Go to** `clearinghouse.fmcsa.dot.gov`. Set up your driver account if you don't already have one.
2. **Find LogisX** in the employer search.
3. **Grant query consent.** Two types: a one-time pre-employment query, and ongoing annual queries.
4. **Tell your administrator** when consent is granted. They'll verify on their side and mark this step Complete.

You only do this once. After consent is granted, LogisX can query annually without any action from you.

Step 4: Driver training

Depending on what you'll be driving and where, your administrator may assign a training course — typically a defensive driving refresher, a HAZMAT module, or a company-specific orientation.

The training itself happens outside the LogisX app (online courses, in-person session, video module). When you finish, tell your administrator and they'll mark the step Complete.

What if something goes wrong

"My document won't load." Check your connection. Refresh the page. If it still won't open, message dispatch.

"I signed the wrong name." Tell your administrator immediately. They can void the document and re-issue it for re-signing.

"My drug test came back positive but I'm not on anything." Talk to your administrator. There's typically a process for confirmation testing or a Medical Review Officer review.

"I can't figure out FMCSA Clearinghouse." The site is its own world. The FMCSA has tutorials at the bottom of their homepage. If you're truly stuck, your administrator has done this before with other drivers and can walk you through.

"I lost my temporary password." Message dispatch or email operations. They'll reset it.

After onboarding

Once every step is **Complete**, the lock screen disappears and you'll land on the **Loads** tab. Dispatch can start assigning you work.

Your first load might not arrive immediately — dispatch matches loads to drivers based on location, equipment, and schedule. Be patient, keep your phone charged, and watch your **Alerts** tab.

When the first load lands, you'll get a push-style notification in your browser (if you've granted permission) and an alert badge on the Loads tab. Open it, read it, accept or decline.

Welcome aboard.

Phone Setup

The LogisX app runs in your phone's browser. This chapter is the difference between "the app keeps logging me out" and "everything just works."

Choose the right browser

LogisX works in any modern browser, but some are better than others on a phone:

PHONE	RECOMMENDED	AVOID
Android	Chrome (it's the default)	Older Samsung Internet, Opera Mini, anything pre-2020
iPhone	Safari (it's the default)	Chrome on iPhone is fine but uses Safari under the hood anyway

If you don't know what browser you're using, you're probably on the default — that's fine.

Internet Explorer is not supported. If your phone has only IE (rare these days), get a real browser from your app store.

Bookmark the app

Open the browser and go to `app.logisx.com`. Then:

- **iPhone:** tap the **Share** button → **Add to Home Screen**. You get a tappable icon on your home screen that opens straight to the app.
- **Android:** tap the **:** menu → **Add to Home screen** (or **Install app**, depending on your browser).

This is worth doing. You'll open the app 50 times a week — a one-tap shortcut saves you typing.

Grant location access

The very first time you open the driver app after onboarding, the browser will pop up a "**app.logisx.com wants to know your location**" prompt. Tap **Allow**.

Without GPS:

- Dispatch can't see where you are.
- Your status won't auto-advance when you arrive at pickup or delivery.
- The customer's tracking link won't work for your load.

Tap **Allow**. If you tapped Block by mistake, the app shows a "Location Access Required" lock screen with per-browser instructions to re-enable. Generally:

- **Chrome (Android):** tap the lock icon in the address bar → **Permissions** → **Location** → toggle on.
- **Safari (iPhone):** Settings → Safari → Location → Allow. Or Settings → Privacy → Location Services → Safari Websites → While Using.

After re-enabling, refresh the page.

Keep the tab alive

Phones aggressively suspend background tabs to save battery. When the tab is suspended:

- GPS reports stop.
- Real-time messages don't arrive.
- Status doesn't auto-update.

To keep things working:

- **Don't close the LogisX tab** during a load. Leave it open.
- **Don't kill the browser app** in the task switcher.
- **iPhone:** lock screen is fine — Safari will keep your tab active. But if you switch to another app for more than a few minutes, iOS may suspend Safari.
- **Android:** similar behavior. Some manufacturers (Samsung, Xiaomi, OnePlus) are especially aggressive — find Settings → Battery → App optimization and exempt Chrome.

If you switch apps and come back to LogisX, it should reconnect within a few seconds. If you've been away for hours, you may need to refresh the page.

Save battery

Running GPS continuously will drain your battery faster than normal browsing. Tips:

- **Plug in.** Most drivers run the phone on a dash mount with a charger. Do that.

- **Reduce screen brightness** when you don't need to see the screen. The app updates fine even when the screen is dim.
- **Don't run other GPS apps simultaneously.** If your dispatcher's TMS, your fuel app, and LogisX are all asking for GPS, your battery will take a beating. LogisX itself is light — heavy GPS use comes from running multiple apps in parallel.
- **Background apps.** Close apps you don't need. They add up.

Data usage

LogisX uses very little data. Average driver-day: 10–30 MB. The app:

- Sends a GPS position every 60 seconds or when you've moved 50 meters (whichever happens first).
- Receives short status messages — no images or video stream.
- Loads small UI updates.

POD photo uploads are the biggest single transfer — a typical phone photo is 2–5 MB. You'll do 1–3 of these per day.

If you're on a metered plan, this is nothing. If you're tethering or using a hotspot, also nothing.

Notifications

The app uses **in-app notifications** rather than your phone's push system. That means:

- When a new load is assigned, you'll see a badge on the **Loads** tab and a brief banner across the top of the screen.
- When a dispatcher sends you a message, you'll see a badge on the **Messages** tab.
- You will **not** get a OS-level push notification that lights up the lock screen.

Why no push notifications? Because phone push requires an installed app (and platform approvals). LogisX runs in the browser, which doesn't have the same capability.

In practice this means: **check the app periodically** when you're on duty. If dispatch needs you urgently, they'll call.

What to do if the app feels slow

Most "the app is slow" reports turn out to be one of:

1. **Bad cell signal.** Check the signal bars. If you're in fringe coverage, the app will struggle.
2. **The phone is hot.** Phones throttle their CPU when they overheat. Move the phone out of direct sun.
3. **Too many tabs open.** Close the browser tabs you don't need.
4. **Old browser cache.** Once a month, clear the cache. (Chrome: Settings → Privacy → Clear browsing data → Cached images and files. Safari: Settings → Safari → Clear History and Website Data.)

If none of those help, message dispatch — there may be a server-side issue.

Multiple devices

You can sign in on more than one device at the same time — for example, your phone in the cab and a tablet at home. Everything stays in sync. Logging out on one device doesn't log you out on the other.

This is useful for two scenarios:

- **Backup phone.** If your primary dies, sign in on your secondary while you charge.
- **Cab tablet.** Some drivers prefer a 7" or 10" tablet on a dash mount for the bigger screen. Same app, same login.

Don't lend your password to anyone, including your spouse or another driver. Each driver should have their own account.

Running a Load, Start to Finish

This chapter is the canonical workflow — from accepting a fresh assignment to delivered with POD uploaded. Most days will look just like this.

When a new load lands

You're on duty (or about to be). Your phone is unlocked. The **Loads** tab in the LogisX app shows a new card with **Accept** and **Decline** buttons.

A few things to look at on the card before you tap anything:

- **Pickup city and date.** Can you get there in time?
- **Drop-off city and date.** Will the delivery window work for you?
- **Pay** (if shown). Does it match what dispatch told you to expect?
- **Equipment notes** (if any). Reefer set point, special permits, anything unusual.

If you have any doubts, **message dispatch first**, before you accept. It's better to ask than to accept and then have to decline.

If everything looks right, tap **Accept**.

What happens when you accept

Three things happen instantly:

1. The load card moves from "Pending" to "Accepted." The Accept/Decline buttons go away.
2. Your dispatcher gets a notification. They know you're committed.
3. The load's status moves from **Dispatched** (which is what an assigned-but-not-accepted load is) to **Accepted**.

You'll see the load appear on the **Status** tab now too — that's where you'll spend most of your time during the actual run.

Driving to pickup

Tap the load card to open the **Load Detail** view. You'll see:

- A **map** showing your current position and the pickup location.

- The full pickup address with appointment time.
- The broker's reference number (good to have if the receiver asks).
- Notes from dispatch, if any.

Use your preferred navigation app to drive to pickup. The LogisX map is for reference; it doesn't do turn-by-turn navigation itself. Most drivers use Google Maps or whatever GPS unit they normally use in the cab.

Arriving at the shipper

When you get within about **500 meters** of the pickup location, your status will **auto-advance to "At Shipper."** You'll see a small notification confirming the change.

If you arrive and the status doesn't auto-advance:

1. **Give it a minute.** GPS sometimes takes a moment to settle.
2. **Refresh the Status tab.** Pull down to refresh.
3. **Manually update.** Tap the next status in the stepper. You'll be asked for a brief reason; "auto-update missed" is fine.

The geofence is not perfect. Dense urban areas, parking lots, big buildings — all of these can interfere with GPS. Manual updates are a normal part of the workflow.

At the shipper

When you check in with the shipper, update status to **Loading** if it isn't already there. (Some workflows skip Loading and go straight from At Shipper to In Transit — your dispatcher will tell you the convention if it differs.)

While they're loading, you can:

- **Message dispatch** if there's a problem (wait time, damaged seal, missing paperwork).
- **Log expenses** if you paid for anything (scale ticket, lumper, etc.).
- **Walk around the truck** for your pre-trip inspection.

Don't leave the shipper until they've signed your BOL.

Leaving the shipper

When you pull out, your status auto-advances to **In Transit**.

If you have a BOL from the shipper (a "pickup signed" copy), you can photograph it now — but most drivers wait until they have the receiver's signature too, then upload everything at once. Either is fine.

On the road

The drive itself is just driving. The LogisX app does its thing in the background:

- GPS reports your position every 60 seconds (or every 50 meters of movement, whichever is more frequent).
- The customer's tracking link shows your live progress.
- Dispatch can see where you are.

You don't need to do anything in the app while driving. Eyes on the road.

If dispatch messages you on the way, you'll see a badge on the **Messages** tab. **Pull over before responding.**

Arriving at the receiver

Same as pickup: when you get within ~500 m, status auto-advances to **At Receiver**. If it misses, manually update.

When you check in with the receiver, update to **Unloading** if your workflow uses that step. (Some don't — fine either way.)

Getting the BOL signed

This is the most important part of the delivery, because the signed BOL is your **Proof of Delivery (POD)** and you have to upload it to get the load closed.

What to make sure happens:

- **Signature** of the receiver (legible, full name).
- **Date and time** of delivery.
- **Any damage notes** the receiver makes.
- **Stamp** if the receiver uses one.

Get the signed BOL into your hands before you pull out of the dock. Don't leave it in the trailer.

Uploading POD

Once you have the signed BOL:

1. Open the load on your phone (Status tab or Loads tab → tap the load).
2. Tap **Upload POD**.
3. Choose **Take photo** to use your camera, or **Choose from gallery** if you've already photographed it.
4. **Frame the BOL** so the whole document is visible, including the signature and any stamps. Make sure it's well-lit and not blurry.
5. Tap to capture, then **Upload**.

The photo uploads, the app converts it to a PDF, and dispatch is notified. Your status advances to **POD Received** (or **Delivered**, depending on the workflow).

Location Access Required

LogisX needs your location so dispatch can track your progress and auto-update load status at pickup & delivery. You can't receive assignments without it.

Location is blocked for this site. Re-enable it:

iPhone Safari: tap the "aA" icon in the address bar → Website Settings → Location → Allow.

Android Chrome: tap the lock icon in the address bar → Permissions → Location → Allow.

Desktop: click the lock in the address bar → Site Settings → Location → Allow, then reload.

Turn on Location

Log Out

If you have **multiple BOL pages**, repeat the upload for each. The app stores them all on the load record.

If the upload fails:

- Check signal strength. Weak signal kills photo uploads.
- Try again from the same screen.
- If it keeps failing, **text or email the BOL** to dispatch as a fallback. They can upload it from their side.

Done

Once POD is uploaded:

- The load is closed from your perspective. You're free to take your next assignment.

- The load shows on your **Completed Loads** view.
- It will appear on your next weekly invoice.

If dispatch needs anything else (a particular note about the load, a follow-up about damage), they'll message you. Otherwise, that's it.

What happens after

A few things in the background once POD is uploaded:

- **Your status** is updated everywhere — admin dashboards, the customer's public tracker, the broker's view.
- **Your driver pay** for this load is accrued. (Calculated based on either daily rate or owner-operator percentage — see Getting Paid.)
- **Your invoice** for the current week is updated.

You don't have to do anything for any of this. The system handles it automatically.

Now go take your break, drink some water, and check the Loads tab for what's next.

Status, GPS, and Geofencing

This chapter explains how the app knows where you are and how that drives the load status automatically. Understanding this saves you from "why didn't my status update?" frustration.

The status flow

Every load goes through a series of statuses from assignment to closure:

```
graph TD; A[Dispatched] --> B[Accepted]; B --> C[At Shipper]; C --> D[Loading]; D --> E[In Transit]; E --> F[At Receiver]; F --> G[Unloading]; G --> H[Delivered]; H --> I[POD Received];
```

Dispatched
↓
Accepted
↓
At Shipper
↓
Loading
↓
In Transit
↓
At Receiver
↓
Unloading
↓
Delivered
↓
POD Received

Not every load uses every status — some shippers skip Loading, some receivers skip Unloading. The order is fixed; you can't skip from At Shipper to At Receiver without passing through In Transit.

How statuses change

Statuses change in two ways:

1. **Automatic** — the geofence detects you've entered or left a location.
2. **Manual** — you tap the next status in the stepper on the Status tab.

Most transitions happen automatically. Manual is the backup.

The geofence

A **geofence** is an invisible circle on the map around a location. The LogisX app uses a **500-meter** geofence (roughly a third of a mile) around your pickup and drop-off addresses.

When the app detects your GPS position has crossed into a geofence (entering) or out of it (leaving), it triggers a status change automatically.

- **Entering the pickup geofence** when status is Dispatched/Accepted → auto-advance to **At Shipper**.
- **Leaving the pickup geofence** when status is At Shipper/Loading → auto-advance to **In Transit**.
- **Entering the drop-off geofence** when status is In Transit → auto-advance to **At Receiver**.

The geofence will not jump statuses out of order. Even if you parked at the receiver's lot two days early, the app won't auto-advance to At Receiver until your current status logically allows it.

When the geofence works perfectly

About 80% of the time, the geofence does exactly what you'd want:

- You drive into the shipper's lot. Status flips to At Shipper.
- They load you. You pull out. Status flips to In Transit.
- You drive to the receiver. Status flips to At Receiver when you arrive.

In these cases, you don't have to touch the Status tab — the workflow just happens.

When the geofence misses or misfires

The remaining 20% of the time, something doesn't go right. Common causes:

- **Bad GPS in the area.** Tall buildings, indoor docks, dense urban canyons. GPS works fine in the open; it's terrible inside a steel warehouse.
- **The address is slightly off.** If the shipper's address in the system is 100 m off from where you actually park, the geofence is centered in the wrong spot.

- **You parked next door.** If you parked at the gas station next to the receiver, you may bounce in and out of the geofence and confuse the system.
- **You arrived early and left.** If you came by yesterday to scout the location and entered the geofence then, the system may have already auto-advanced and you missed it.

When the geofence misses, just **update the status manually**. Tap the next status in the stepper. The app will ask for a brief reason — type anything, "auto missed" is fine — and confirm.

Updating status manually

From the **Status** tab:

1. You'll see your current load and a status stepper showing all the steps.
2. The current status is highlighted.
3. The next valid status is tappable.
4. Tap it.
5. You'll see a small dialog asking for a reason.
6. Type a short reason.
7. Tap **Confirm**.

The change happens immediately. Dispatch sees it within a couple seconds.

You can also update status from the load card on the **Loads** tab — tap the load, pick a status. Same result.

The "one active job" guard

The app will **not** let you advance status into an active state (At Shipper, Loading, In Transit, At Receiver) if you already have **another** load in one of those statuses. This is a safety check — you can't be physically at two pickups at once.

If you hit this and you genuinely need to update both loads (rare — typically only happens when a load is being incorrectly tracked), message dispatch. They can fix the underlying issue.

GPS reporting cadence

The app reports your GPS to the server on this schedule:

- **Every 60 seconds** when you're stationary or moving slowly.

- **Every 50 meters of movement**, whichever happens first.
- **Minimum 10 seconds between reports** to avoid flooding the server.

In practice this means: when you're driving 60+ mph, the app reports every 5–6 seconds (every 50 m of movement). When you're parked, it reports once a minute. When you're crawling through a yard, somewhere in between.

This is enough resolution that dispatch and the customer's tracking link see your position update smoothly without your battery taking a beating.

GPS accuracy

A few realities about phone GPS:

- **Good signal:** accurate to 5–10 meters.
- **Marginal signal (tall buildings, deep canyons):** accurate to 30–100 meters.
- **No signal (indoor, tunnel):** no GPS at all; the app keeps the last known position.

The geofence is generous (500 m) to tolerate the marginal-signal case. In tunnels and deep indoor areas, the app falls back to "last known position" until GPS returns.

If you see your position on the map jumping around erratically, your phone is having trouble locking onto satellites. Move outside, stand still for 30 seconds, then check again.

What dispatch sees

When dispatch opens the Tracking map, they see:

- A blue dot for your current position.
- The path you've traveled (orange dashed line).
- The remaining route to destination (blue solid line).
- An ETA based on your current speed and remaining distance.

When you're parked, the dot doesn't move. When you're rolling, it moves smoothly between updates.

If dispatch doesn't see you moving when they expect you to be, they may call. Have your story ready — bathroom break, scale, lunch, fueling, accident — anything legitimate is fine. If you've broken down or had an accident, **call them, don't just sit there expecting them to figure it out.**

What happens if your phone dies

Three scenarios:

1. **Phone dies for 5 minutes.** Charge it, open the app, you're back. The system saw a gap but nothing breaks. Your status hasn't moved on its own; it'll auto-advance again when you next come into or out of a geofence.
2. **Phone dies for an hour.** Same recovery, longer gap. Dispatch may have called your cell phone (or your spare). They'll have noticed.
3. **Phone is stolen or broken and you can't get it back online.** Call dispatch immediately. They can take over the status updates manually from their side. Don't let a dead phone leave a load in limbo.

Pro tips

- **Pull into the geofence on purpose.** When the app auto-advances on a phantom pass-through, the fix is to drive back in and out. Easier than fighting the manual UI.
- **Update status manually if you suspect anyone is waiting.** A dispatcher sitting at the dashboard watching your dot crawl into the receiver's lot is happy to see "At Receiver" pop up. If your geofence is going to miss, beat it.
- **Don't manually advance ahead of yourself.** Tempting on a long haul to flip In Transit → At Receiver when you're still 5 minutes out. Don't — the customer tracker shows the status to the broker, and "At Receiver" when you're not actually there looks dishonest.
- **If you forgot you accepted a load, the GPS will catch up.** As long as the app is open, GPS keeps reporting. The status flow just runs.

Now turn the page for POD uploads — the one part of the workflow you actually do have to be deliberate about.

Uploading Proof of Delivery

The POD upload is the single most important manual step in the whole workflow. Without a POD, the load is not delivered — it sits in limbo until you (or dispatch) closes it. This chapter is how to do it right.

What counts as a POD

A POD is a **signed Bill of Lading (BOL)** from the receiver. The signature confirms the receiver got the freight in the condition described. Standard contents:

- **Receiver signature** — legible, full name (or company stamp).
- **Date of delivery.**
- **Time of delivery.**
- **Any damage exceptions** noted by the receiver (e.g., "2 cases dented").
- **Receiver's printed name** alongside the signature.
- **Company stamp** if the receiver uses one (some warehouses do; not required if signed).

A clean signed BOL with no exceptions is the gold standard. A BOL with exceptions is still valid — it just means you and dispatch need to flag the damage for the broker.

When to upload

As soon as you have the signed BOL. Don't wait until the end of the day. Uploading at the dock means:

- Dispatch knows the load is delivered.
- The broker can be invoiced immediately.
- You don't have to remember to do it later (or forget and have dispatch chasing you).

Best practice: tape the BOL to your dashboard, walk back to the cab, upload, then pull out.

How to take a good POD photo

Bad PODs are the #1 reason an upload has to be re-done. Three rules:

1. **Get the whole document in frame.** All edges visible. Don't crop the receiver's signature.

2. **Lighting matters.** If you're at a dark dock, step into better light or use your phone's flash. A photo where you can't read the signature is useless.
3. **Hold still.** Blurry photos can't be processed. Brace your phone hand against your other arm or against the dashboard. Wait for autofocus to settle.

A few specific tips:

- **Flat on a surface** is easier than holding the document by hand. Put it on the dashboard, the seat, or the dock's clipboard.
- **Avoid glare.** If the BOL is printed on glossy paper or has a wet ink signature, angle the phone to avoid reflections.
- **Crop tight, but not too tight.** A small white border around the document is fine. Don't cut off anything important.
- **Try a second photo if the first looks bad.** Just retake — uploads aren't billed by attempt.

The upload step by step

1. Open the load. From the **Status** tab (your current load) or **Loads** tab (any active load), tap the load to open its detail view.
2. Tap **Upload POD**. You'll see two options:
 - **Take photo** — opens your phone's camera directly.
 - **Choose from gallery** — opens your photo library if you already took the picture.
3. **Take or pick the photo.** Frame it as described above.
4. **Review.** A preview will show. If it looks bad, tap **Retake** and try again.
5. Tap **Upload**. The progress indicator shows the upload working. Most uploads take 5–15 seconds.
6. **Wait for the confirmation.** A green checkmark appears when the upload is complete.

The status will auto-advance to **POD Received** once the upload completes.

Location Access Required

LogisX needs your location so dispatch can track your progress and auto-update load status at pickup & delivery. You can't receive assignments without it.

Location is blocked for this site. Re-enable it:

iPhone Safari: tap the "aA" icon in the address bar → Website Settings → Location → Allow.

Android Chrome: tap the lock icon in the address bar → Permissions → Location → Allow.

Desktop: click the lock in the address bar → Site Settings → Location → Allow, then reload.

Turn on Location

Log Out

Multi-page PODs

Some loads have more than one BOL — pallet manifests, lumber receipts, scale tickets that count as part of the delivery package. You can upload as many photos as you need.

For each additional page:

1. Tap **Upload POD** again from the load detail.
2. Take or pick the next page's photo.
3. Upload.

Each upload is a separate entry on the load's documents. Dispatch sees all of them.

A tip for multi-page jobs: photograph them in order (page 1, page 2, page 3) so the documents are easy to follow in dispatch's view.

What happens after upload

When the upload completes:

- The photo is converted to a PDF on the server.
- The PDF is uploaded to Google Drive in LogisX's POD folder.
- A record is added to the load's documents list.
- Dispatch is notified.
- Your load status advances to **POD Received**.

The load is now functionally closed. Your work on it is done. The accounting team can invoice the broker; your dispatcher can release the load from active tracking.

When the upload fails

The most common failure is "weak signal." If the upload spinner runs for more than 30 seconds, the signal probably isn't strong enough.

What to do:

1. **Check your signal bars.** If you have one bar or less, the upload won't make it.
2. **Move to better signal.** Even 100 feet can make a difference. Drive across the receiver's lot or up to the street.
3. **Try again.**
4. **As a fallback, text or email the photo to dispatch.** They can upload from their side. Get a confirmation back from them so the load doesn't sit in limbo.

The app will retry a failed upload automatically once, but after that, you have to manually try again.

When the photo is bad

If you uploaded a blurry or poorly-framed POD, dispatch may ask you to upload a better one. They can see the photo from their side and decide.

You **cannot delete** a POD you uploaded — only add more. So if you uploaded a bad one, just upload a good one. The good one will be the working copy; the bad one stays as a "first attempt" record.

If dispatch isn't asking for a re-upload, the bad one was good enough for them. Don't worry about it.

What if you forget to upload?

It happens. You unload, drive away, get a call about your next load 30 minutes later, and only remember the BOL at the next fuel stop.

Open the previous load (it'll still show in your active list because POD isn't uploaded yet) and upload from wherever you are. Dispatch will appreciate it before the day is out.

If you've lost the BOL — left it at the dock, blew out the window, dog ate it — call dispatch immediately. They have processes for this (typically the receiver can email a copy, or dispatch can take a verbal confirmation as a stopgap). Don't try to make it up.

Some receivers' quirks

A few things you'll encounter:

- **Bagged BOLs.** Some receivers seal the signed BOL in a bag and tell you not to open it. In that case, photograph the bagged document — the receiver's signature should still be visible through the plastic.
- **Multiple-copy BOLs.** Some BOLs are 3-part or 4-part forms. You usually keep one copy and the receiver keeps another. Photograph the copy you keep (which should have the receiver's signature).
- **Stamped, not signed.** Some warehouses stamp the BOL with the company name instead of signing. That's typically acceptable as POD; upload as normal.
- **Digital BOLs.** A few receivers are moving to electronic POD systems. If they email you the signed BOL, save the email and upload the attachment via "Choose from gallery."

When in doubt, upload what you have and let dispatch make the call on whether it's enough.

Logging Expenses

Trip expenses — fuel, repairs, tolls, scale tickets, parking, lumpers, washouts — get logged in the app so the company can track and reimburse them. This chapter is how.

What to log

Anything you paid for that's related to running a load:

- **Fuel** — diesel or DEF. Most common expense.
- **Repairs** — tire, brake, anything emergency-fix at a truck stop or shop.
- **Tolls** — turnpikes, bridges, expressways. (If your truck has an automatic toll device, those get billed separately and you don't need to log them.)
- **Scale tickets** — weighing fees at CAT or other scales.
- **Lumpers** — payments to dock workers for help unloading.
- **Washouts** — reefer or tanker cleaning.
- **Parking** — overnight at paid lots.
- **Tarps** — if you had to buy or rent one.
- **Permits** — overweight, oversize, single-trip permits.

What **not** to log here:

- **Personal expenses** — your food, coffee, motel. Those are yours.
- **Fines or tickets** — yours.
- **Insurance** — that's a company-level fixed cost, not a trip expense.

If you're not sure whether something counts, log it with a clear note. Worst case, dispatch rejects it and you know for next time.

How to log an expense

From the **Kit** tab, scroll to **Expenses** and tap **Add Expense**.

The form has these fields:

FIELD	WHAT TO ENTER
Type	Fuel, Repair, Toll, Scale, Lumper, Wash, Parking, Other. Pick the closest match.
Amount	The dollar amount. No currency symbol needed.
Date	Defaults to today. Change if logging an older expense.
Vendor	Where you paid (Loves, Pilot, the receiver's lumper service, etc.).
Description	Short note — useful for unusual expenses.
Load ID	Which load this expense is associated with. Defaults to your current load if any.
Gallons (fuel only)	How many gallons you bought.
Odometer (fuel only)	Truck odometer reading.
Photo	A picture of the receipt.

Tap **Save**. The expense appears in your list with status **Pending** until an admin reviews it.

Using the photo + AI

This is the trick that saves you typing. Instead of filling in the form by hand:

1. Tap **Add Expense**.
2. Tap **Take photo of receipt** (or the camera icon at the top of the form).
3. Photograph the receipt.
4. **Wait a few seconds** while the app's AI reads the receipt.
5. **Fields auto-fill** — amount, date, vendor, and (for fuel) gallons and odometer.
6. **Review the values**. The AI is usually right but not perfect. Fix anything wrong.
7. **Pick the type** if it wasn't detected correctly.
8. Tap **Save**.

The OCR works best on:

- Clear, well-lit photos.
- Receipts that aren't crumpled.

- Receipts where the printing is dark and readable (older thermal receipts that have faded are hard).

If the AI reads it wrong, just edit the field. The auto-fill is a convenience, not a requirement — you can also tap **Skip AI** and fill the form manually.

Photographing receipts

The OCR is forgiving but not magical. To help it:

- **Flat on a surface.** Don't hold the receipt in mid-air.
- **Good lighting.** Fluorescent dome light at a truck stop is fine. Direct sun causes glare.
- **The whole receipt.** Including the total and the date.
- **Right-side up.** The AI can handle some rotation, but a perfectly oriented photo is more reliable.

If the receipt is two pages (some longer fuel receipts are), photograph the total page. The line items page is nice-to-have but the total is what matters.

Fuel receipts have extra fields

Fuel is the most-logged expense and it has two extra fields:

- **Gallons** — the volume you bought.
- **Odometer** — the truck's odometer reading at the time of fueling.

Both are used for fleet MPG analytics. Logging them means the company can spot trucks burning fuel faster than expected (often a sign of a maintenance issue) or drivers who fuel suspiciously often (often a sign of a problem worth investigating).

You don't have to be perfect. **Within 10 gallons is fine for the gallons field; within 100 miles is fine for the odometer.** The point is the trend over time, not the individual data point.

After you save

Your expense appears in your **Expenses** list with a status of **Pending**. From there:

- **Admin reviews** — usually within a day or two.
- **Approved** — the expense is counted toward your reimbursement.

- **Rejected** — admin will message you with a reason. Common reasons: missing photo, wrong load ID, expense that's not actually reimbursable.

You can see the status of all your expenses on the same list. **Approved** expenses show a green checkmark; **Rejected** show red.

What you cannot do

- **Delete an expense** after submitting it. If you logged something by mistake, ask dispatch to reject it. The rejection records the mistake clearly.
- **Edit a submitted expense.** Same workflow — ask dispatch to reject it, then submit a corrected one.

These limitations are intentional. Once an expense is in the system, it has an audit trail. Edits and deletes would muddy the trail.

Cash vs. card

It doesn't matter how you paid — log it the same way. Cash payments still need a receipt (or, in a pinch, a short description of what was paid and why).

If you paid with a company fuel card, log it anyway — the company already sees the card transaction, but your log links it to the specific load. Without the link, the expense doesn't get matched to the right load's profitability calculation.

When you didn't get a receipt

It happens — automatic toll booths, some lumpers, lost receipts. Log it anyway:

- **Type:** the closest match.
- **Amount:** what you paid (be honest).
- **Description:** something like "automatic toll, no receipt issued."
- **Photo:** skip.

Admin may follow up to confirm. As long as it's reasonable and clearly logged, it usually gets approved.

Tips

- **Log expenses at the truck stop, not at the end of the day.** A 30-second log right after fueling is easy. Reconstructing a full day from a fistful of receipts at 9 PM is miserable.
- **Photograph in landscape, not portrait, for long receipts.** Better aspect ratio.
- **Tap into the Load ID field.** If your current load is selected, you don't have to type. If you're logging an expense for a previous load, the dropdown shows recent loads.
- **Don't double-log.** If you've already logged a fuel stop and you check the list later, don't add it again. The list shows all your pending and approved expenses.
- **Receipts faded?** Some thermal receipts fade in heat. Photograph fresh.

Now, on to messaging dispatch — the lifeline.

Messaging Dispatch

Your messaging tab is the lifeline. When something is up — a delay, a question, a problem at the dock — that's where you reach dispatch.

The basics

From the **Messages** tab, you'll see a chat window with your dispatcher. Type in the box at the bottom, tap **Send**.

That's it for the basics. Everything else is about *when* to message and *how* to be useful.

When to message vs. call

A general rule:

- **Message** when the issue can wait 5–15 minutes for a response.
- **Call** when you need someone on the line right now.

Things to **message**:

- "Stuck in a long line at the receiver, will be 30 minutes late checking out."
- "Receiver had a damage exception on 2 cases, attaching photo."
- "Asked to wait until tomorrow morning for unloading, OK?"
- "Need to confirm the rate on LD-3492 — broker said \$1,800 but the load shows \$1,650."
- "Done with my hours, parking at a Pilot for the night."

Things to **call**:

- "I just hit a deer, truck is in the median, I'm OK."
- "Driver door is jammed, can't get out of the cab."
- "Receiver is refusing the load entirely."
- "I think I have a medical issue."
- "The truck won't start at the pickup, I'm 200 miles from home."

In an emergency, **call first, then 911**. Don't open the app to type while you have a situation.

Per-load messages

When you message from within a specific load (tap the load → Messages within it), the message is **scoped to that load**. Your dispatcher sees it in two places:

- The general Messages thread with you.
- The detail view of that specific load.

This is useful because it gives dispatch context — they don't have to ask "which load?"

If your message is about a specific load, use the per-load thread. If it's about your day in general, use the main thread.

Attaching photos

Tap the paperclip icon (or camera icon, depending on the platform) next to the message box. Pick a photo from your gallery or take one new.

Photos are useful for:

- **Damage at pickup or delivery.** Photograph the damage right when you find it, before anyone moves the freight.
- **Rate Con issues** — a photo of the broker's emailed rate con if there's a discrepancy.
- **A messed-up dock** — receiver's lot configuration, blocked entry, etc.
- **A broken-down truck** — for your service contact.

Don't send selfies, memes, or non-work photos to dispatch. Keep it professional.

Response times

Dispatchers aren't always at their screen. Typical response time:

- **Daytime, business hours:** 1–5 minutes.
- **Evening, after hours:** 15–30 minutes (depending on whether your dispatcher works extended hours).
- **Overnight:** could be hours. If it's urgent, call the after-hours line.
- **Weekends:** similar to overnight.

If your dispatcher hasn't responded and you have a real situation, **call**. Don't sit and wait.

Tone

Keep messages clear and professional. A few examples:

Bad:

"WTF is this load"

Good:

"Just looked at LD-3492 and the delivery window says Tue 8am but the broker told me Wed 6am. Can you confirm?"

Bad:

"k"

Good:

"Got it, on my way."

Bad:

"DELIVERED!!!"

Good:

"Delivered LD-3492 at 7:42 AM, POD uploaded, heading home."

Dispatch isn't your friend group. They're your work colleagues. Texting tone, not group-chat tone.

What dispatch can do for you

Things to ask dispatch about:

- **Load details** — clarify pickup/dropoff times, addresses, contact names at the dock.
- **Rate or pay questions** — they have the rate confirmation and can clarify.
- **Reassignment** — if you can't run a load you accepted, ask.

- **Document issues** — registration or insurance not loading on your phone, etc.
- **HOS questions** — they have your duty time and can advise.
- **General "I'm not sure what to do" questions.**

What dispatch can't do for you

- **Drive your truck.** They can't shorten your route or skip your break.
- **Negotiate with brokers** mid-load. The rate was agreed at booking; mid-load renegotiation almost never works.
- **Make a receiver accept damaged freight.** They can advocate for you, but the receiver has the final call.
- **Cancel an HOS violation** that already happened. Logbook is what it is.

Reading messages while driving

Don't.

If your phone is mounted, you can glance and see "there's a new message" — but don't read or reply. Pull over.

This is a safety thing and a legal thing — most states have hands-free laws that prohibit reading text messages while driving. The fine for a citation is a lot more than the 30 minutes you'd save by reading on the road.

If dispatch needs an immediate response, they should call. Their call comes through your hands-free system. Their message can wait until you stop.

A note on the broader Notifications tab

The **Alerts** tab (also called Notifications) is different from Messages:

- **Alerts** is system-generated — "you have a new load," "your status was auto-updated," "an expense was approved."
- **Messages** is human-to-human — dispatch typed something, you typed something.

You'll glance at Alerts occasionally to clear the badge. You'll be in Messages every day to communicate.

A few good habits

- **Acknowledge messages.** A quick "ok" or "got it" lets dispatch know you saw it. They appreciate it more than you'd think.
- **Don't ghost.** If dispatch asks "where are you?" and you ignore it for two hours, they will assume the worst. Even a "still rolling, eta 4pm" buys you peace.
- **Be honest about delays.** If you're going to be late, say so. Dispatch can warn the receiver and reschedule. A surprise late arrival is much worse than a known one.
- **Stay logged in.** If you sign out at the end of the day, you might miss the next morning's load alert. Stay signed in; the session lasts.

Truck Documents on Your Phone

You don't have to carry a folder of paper documents anymore. Registration, insurance card, annual inspection, and other documents for your currently-assigned truck are viewable in the LogisX app whenever you need them.

What you'll find in the Kit tab

Open the **Kit** tab. You'll see a section called **Documents** showing the documents that an administrator has flagged "driver-visible" for the truck you're currently assigned to. Typically:

- **Registration** — your truck's plate registration.
- **Insurance card** — proof of commercial auto insurance.
- **Annual inspection** — DOT annual inspection certificate.
- **Cab card / IRP** — interstate apportionment registration.
- **HVUT 2290** — federal heavy vehicle use tax stamped Schedule 1.

Other documents may or may not be there depending on what your administrator has uploaded:

- IFTA license.
- Permits (overweight, oversize, single-trip).
- HAZMAT registration if applicable.
- Lease paperwork.

If something you expect isn't there, message dispatch. They can either upload it or grant you visibility on a document that already exists.

How to view a document

Tap the document. It opens inline in your browser. You can:

- **Zoom in** to read fine print.
- **Show to an officer or inspector** at a roadside stop.
- **Scroll** if it's a multi-page document.

You **cannot**:

- **Download** the document to your phone. By design — these are company documents, not yours to keep on a personal device.
- **Email or share** the document outside the app. Same reason.
- **Edit or delete** the document. Read-only.

The "no download" rule is enforced server-side. If you actually need a physical copy (some receivers ask for one), ask dispatch to email it.

What to do at a roadside inspection

A DOT officer pulls you over for an inspection. They want to see your registration, insurance, and (depending on the level) your annual inspection certificate.

1. **Pull over safely** and stop the truck.
2. **Get out** if requested. The officer may want you out for safety.
3. **Find your hard-copy documents first** if you have them. The officer will accept paper if you have it.
4. **If you don't have paper, open the LogisX app and pull up the documents on your phone.**
5. **Hand the phone to the officer** for them to view, or hold it up so they can read.
6. **Be cooperative.** Officers generally accept phone-based documents (federal regulations allow electronic display), but some prefer paper.

If the officer says they need paper and you don't have it, call dispatch. They can email the documents to a printer or fax. This is rare but it does happen.

When you're reassigned to a different truck

If dispatch moves you from one truck to another:

- The Documents list **automatically updates** to show the new truck's documents.
- You **lose access** to the previous truck's documents immediately. This is by design — once you're not driving truck X, you have no business with its documents.

The reassignment shows up the next time you refresh or navigate around the app. Usually instant.

When the truck has no driver-visible documents

If the documents list is empty, it might mean:

- **No documents have been uploaded** for your truck yet. Message dispatch.
- **Documents exist but aren't flagged driver-visible.** Some documents (lease agreements, internal paperwork) are admin-only. Ask dispatch which documents you should be able to see; they can toggle visibility per-document.

Inspector tip

A few officers in a few states are unfamiliar with electronic documents and ask for paper. To avoid the dance:

- **Keep paper copies in the cab** as backup. Most fleets give you a folder with at least the registration and insurance card.
- **Don't argue.** If the officer wants paper, give them paper or call dispatch. Arguing with an inspector is never the play.

The app is your primary set; paper is your fallback.

Document expiration

Documents on your phone are the latest version. When something expires (registration, insurance, inspection), your administrator uploads a new version and the old one disappears from your list.

If you see a document that's near or past its expiration date, message dispatch. It may have already been renewed — the new version just hasn't been uploaded yet. Don't drive on an expired document if you can help it.

Other phones, other accounts

These documents are tied to **the truck you're driving**, not to you personally. If you switch trucks mid-week or drive multiple trucks (relief driver scenarios), the documents change with each assignment.

The same documents will appear on whatever device you're signed in on — phone, tablet, desktop. They're the same documents from the server.

Shared documents

In addition to truck documents, there's a separate **Shared Documents** section for documents an administrator has personally shared with you (e.g., a HAZMAT certificate you uploaded during onboarding, your medical card, your CDL on file).

These are different from truck documents because they follow **you** rather than the truck. Shared with you means yours to view as long as your account is active.

Pro tip

Before pulling out from any pickup, glance at the Documents list and confirm:

- Registration current?
- Insurance current?
- Anything missing?

If something's expired or missing, message dispatch **now** rather than after you've crossed three state lines. The "I'd better fix this" energy you have at the dock is way better than the "oh crap" energy you'd have at the weigh station.

Getting Paid

This chapter is the part you actually care about. How LogisX calculates your pay, what your weekly invoice looks like, when you get paid, and what to do if something looks wrong.

The pay structure

LogisX uses one of two pay structures, depending on how you're set up:

Daily rate (most company drivers)

You get paid a **flat daily rate** for every calendar day you were active on a load.

- The default rate is **\$250 per active day** (this may be different for you — check your contractor agreement).
- An "active day" is any calendar day you spent some portion of on a load.
- **Multi-day loads count every day they span.** A pickup on Monday and delivery on Wednesday is **3 active days** (\$750), not 1.
- **Multiple loads on the same day count as 1 day.** Three short hops on Thursday is **1 active day** (\$250).
- The system **deduplicates** so you can't double-count a day.

In math:

```
Driver Pay for the week =  
$250 × (number of unique calendar days you were active on any load)
```

Owner-operator (percentage of revenue)

If you're an owner-operator, you get a **percentage of the load's revenue** rather than a daily rate.

- Typical splits are **70% to driver / 30% to company** but yours may differ — check your contract.
- The percentage is calculated on **gross revenue** of the load.

- This includes the line haul rate but generally excludes fuel surcharge and accessorials (your contract spells out exactly what's in the calculation).

In math:

Driver Pay for the week =
 $\sum (\text{load_revenue} \times \text{your_percentage})$ for every load delivered in the period

Your administrator told you which structure applies to you during onboarding. If you don't remember, check your contractor agreement or ask.

The weekly invoice

Once a week, the system generates an invoice for you covering the past period (typically Sunday-to-Saturday or Monday-to-Sunday, depending on your company's convention).

To see it: **Kit** tab → **Invoices**. You'll see a list of invoices ordered newest first.

Each invoice shows:

- **The period covered** (e.g., "Apr 14 – Apr 20, 2026").
- **The loads included** — Load ID, pickup city, dropoff city, dates.
- **Active days** (daily rate) or **revenue and percentage** (owner-op).
- **Base pay** before any adjustments.
- **Adjustments** — additions or subtractions for unusual circumstances.
- **Total** — what you'll be paid.
- **Status** — Pending, Submitted, Approved, Paid.

You can **download the invoice as a PDF** for your records. Most drivers keep these for tax season.

Invoice statuses

The lifecycle:

Pending → Submitted → Approved → Paid

- **Pending** — the system generated the invoice. You should review it.

- **Submitted** — you've submitted it for approval (some workflows have you do this; others auto-submit).
- **Approved** — admin reviewed and approved. Payment will be processed.
- **Paid** — payment has been initiated to your bank.

The payment itself goes through your company's payroll/AP process. The LogisX app shows "Paid" once admin marks it; the actual money lands in your bank a day or two later depending on the bank.

When you get paid

Standard cadence is **weekly**, with payment landing in your bank account on a fixed day of the week (often Friday for work performed through the prior Sunday). Your administrator told you the specific schedule during onboarding.

If you don't see a payment by the expected day, **message dispatch first**. They can check the invoice status. If it's still "Approved" rather than "Paid," the payment hasn't been processed yet.

What to do if your invoice looks wrong

Three common things to verify before you complain:

1. **Are all your loads from the period there?** If you remember running a load that's missing, the load may not be attributed to you in the system. Check the load's driver name field; ask dispatch to fix if it's wrong.
2. **Are the dates correct?** For daily-rate pay, an incorrect pickup or dropoff date can mean a multi-day load is counted as fewer days. The dates need to match the actual pickup-to-delivery span.
3. **Are the rates correct?** For owner-op, the rate per load comes from the original rate confirmation. If the rate in the system doesn't match what was agreed, ask dispatch — there may have been a typo on entry.

To raise an issue:

1. **Open the invoice** and screenshot the parts that look wrong.
2. **Message dispatch** with: the invoice number, the specific load(s) involved, and what you think is wrong.

3. **Be specific.** "My invoice is wrong" is hard to act on. "Invoice #INV-2026-15 is missing load LD-3492 from Tuesday" is easy.

Admin will investigate and either correct the invoice or explain why it's calculated the way it is.

Adjustments

Sometimes an invoice has an adjustment — an addition or subtraction outside the normal load-based calculation. Common reasons:

- **Bonus** — exceptional service, on-time delivery streak, etc.
- **Deduction** — fines paid by the company that the contract assigns to the driver, equipment damage, etc.
- **Layover pay** — being stuck at a dock for an extended wait.
- **Detention pay** — receiver kept you over the loading allowance.
- **Per diem** — daily meal allowance (different rules per company).

Adjustments are at the discretion of admin. They typically come with a note explaining why. If you see one and you're not sure what it's for, ask.

Direct deposit setup

Your direct deposit information was set up during onboarding (you entered routing and account numbers on the Independent Contractor Agreement). To change it:

- Don't change it in the app yourself.
- **Notify your administrator** in writing — usually email — with the new banking info.
- Admin will update it in the system.

This is intentional. Changing your direct deposit is a security-sensitive operation; the company wants a paper trail before it happens.

Tax forms

At the end of the year, you'll receive a **1099-NEC** (if you're an independent contractor) or **W-2** (if you're a company employee). The form summarizes your annual earnings for the IRS.

- **1099-NEC contractors** — no taxes are withheld. You're responsible for paying quarterly estimated taxes. Set aside ~25-30% of every payment for the IRS.

- **W-2 employees** — taxes are withheld from each payment.

Talk to a tax pro if you're unsure which applies. For drivers especially, deductions for fuel, meals, lodging, etc. can significantly reduce your taxable income, but only if you keep records.

Keeping good records

A few things you should keep yourself, regardless of what the app tracks:

- **PDF copies of every weekly invoice.** Download from the app. Keep in a folder by year.
- **Personal expense receipts** — meals, lodging, anything not reimbursed by the company that you can deduct on your taxes.
- **Personal mileage log** — if you drive your own car between truck and home, you may be able to deduct.
- **Per diem records** — if you took per diem, keep day counts.

LogisX tracks what you got paid for and reimbursed for. It doesn't track your personal tax situation. That's on you.

Pay disputes — escalation

If you've messaged dispatch about a pay issue and the response is "no, that's how it's calculated," but you still think it's wrong:

1. **Re-read your contract** carefully. The pay terms are spelled out and they're binding.
2. **Talk to your administrator** by phone, not just message. Voice resolves things faster than text on financial questions.
3. **If you're still not satisfied**, escalate to LogisX leadership. The CEO is Deshorn King; operations leadership has contact info on file.

In years of operation, the vast majority of pay disputes turn out to be either (a) a misunderstanding about the pay formula or (b) a data entry error that admin gladly fixes. The system is designed to be transparent — every load, every day, every adjustment is on the invoice. If you can point to a specific discrepancy, it gets resolved.

Driver Best Practices

This chapter is the unwritten stuff — the habits that separate the drivers everyone wants to keep from the ones who burn out fast. Most of it is common sense.

Communication

Be reachable. If dispatch can't reach you within 30 minutes during your duty time, something is wrong. Keep your phone charged, on, and within arm's reach.

Acknowledge messages. Even a quick "got it" lets dispatch know you saw it. Silence is interpreted as disengagement.

Don't ghost. If you're going to be off-duty for an extended period (sleep, vacation, repair shop), tell dispatch in advance. Don't disappear and resurface 12 hours later.

Tell dispatch about delays early. A 2-hour heads-up about a delay is worth 10x the same notice given 5 minutes after you missed the appointment.

Pickup and delivery

Be early when possible. Showing up 15 minutes before an appointment is the norm in trucking. Showing up an hour early often means you'll get loaded/unloaded ahead of schedule. Showing up late is a problem.

Check in promptly. At pickup, find the shipper office or dispatch desk and check in within 5 minutes of arrival. At delivery, same.

Be polite to dock workers. They control how fast you get loaded or unloaded. A rude driver gets the back of the line.

Walk around the truck before you pull out of both pickup and delivery. Make sure your trailer doors are latched, the apron is clear, you don't have a lump worker still under the trailer, etc.

Documents

Always get a signed BOL before pulling out of a delivery. If the receiver won't sign, call dispatch before you leave. Don't just drive off — that creates a much bigger problem than a 10-minute call.

Upload PODs the same day. Ideally before you leave the delivery lot. Definitely before you go to bed.

Keep paper copies of registration, insurance, and inspection in the cab as backup. The app is great until your phone is dead.

Driving

Pre-trip every day. The DOT mandates it, and beyond that, finding a problem in the lot is way better than finding it on I-80.

Don't drive tired. Hours of Service rules are there for a reason. If you're falling asleep, pull over.

Don't take loads that won't fit your HOS. If a load requires 12 hours of driving and you only have 8 hours of available drive time, decline it or call dispatch for a different assignment. Don't say "I'll figure it out."

Drive defensively. Big trucks kill people in cars. Assume the worst from every four-wheeler around you.

Equipment

Treat the truck like it's yours. Empty trash. Sweep out the cab weekly. Don't smoke inside. Don't drink coffee on the dashboard. Future drivers (and inspections) will thank you.

Tell dispatch about issues immediately. A weird noise, a fluid leak, a tire that looks low — message dispatch the moment you notice. They can schedule maintenance before it becomes a roadside breakdown.

Don't try to fix things yourself beyond fluid checks and the obvious. If the engine light comes on, get to a shop. Roadside attempts at mechanical work end in worse ways than they start.

Money

Save your receipts. Even after you log them in the app. Keep a folder in the cab.

Log expenses promptly. That afternoon, not three days later. The receipts get faded, you forget which load they were for, and the time tax adds up.

Don't overstate expenses. Admin sees your spending pattern. A driver who suddenly logs 200 gallons of fuel for a 300-mile trip is going to get questions. Be honest.

Check your invoice weekly. The night your invoice generates, glance at it. Catching an error in the same week is way easier than catching one three months later.

Safety

Wear your seatbelt. Every trip, every time. Statistically the single biggest factor in surviving a crash.

Don't text or read messages while driving. Pull over. It's the law in most states, and it's just smart.

Park smart. Truck stops fill up by 7 PM. Have a plan for where you're sleeping by mid-afternoon, not when you're already 30 minutes past your HOS limit.

Carry water and snacks. Long delays at docks are normal. Don't depend on the receiver's vending machines.

Dealing with the unexpected

Detention pay. If a receiver keeps you over the loading allowance (typically 2 hours), you may be owed detention pay. Note the time in/out on the BOL, and tell dispatch. The broker pays detention; LogisX passes through what they collect.

Layover. If you're stuck at a location overnight because the receiver isn't open, that's layover. Tell dispatch — you may be owed layover pay.

Damage. If you find damaged freight at pickup or the receiver flags damage at delivery, **photograph it immediately** before anyone moves the freight. Send the photos to dispatch. Don't accept blame for damage you didn't cause.

Refused load. If a receiver refuses the entire load, don't argue with them. Call dispatch and let them sort it out with the broker. You may end up driving the load to a different receiver.

Relationships with other drivers

Don't bash the company on group chats. Driving for any carrier has frustrations; venting at scale gets back to leadership. Talk to your dispatcher directly.

Help new drivers. A 15-minute conversation about which truck stops to avoid in Houston saves a new driver a week of pain.

Don't share account credentials. Each driver has their own LogisX account. Lending yours to a buddy creates audit confusion and potentially gets you in trouble.

Personal

Take your time off. Burnout is real. Use your home time.

Eat reasonably. Truck stop food keeps you alive but slow. Try to keep some fruit and protein bars in the cab.

Talk to your family. Long distance trucking is hard on relationships. Schedule calls home. Don't let the road silence you.

See a doctor for your DOT physical ahead of when it's due, not the day before. Surprises are easier to handle when you have time.

Final thought

The drivers who last in this industry are the ones who **treat it like a profession**, not just a job. That means showing up on time, communicating well, taking care of equipment, being honest about hours and expenses, and treating dispatch like teammates rather than adversaries.

The app makes the operational stuff easy. The professional stuff is on you.

Troubleshooting

The most common things that go wrong, in roughly the order you'll hit them.

"I can't sign in."

Check, in order:

1. **Caps lock.** Username and password are case-sensitive.
2. **Right URL.** `app.logisx.com`, not the marketing site `logisx.com`.
3. **Recent password change.** If you changed your password recently and now can't sign in, the change may not have saved correctly — ask dispatch to reset it.
4. **Locked out from failed attempts.** After several wrong passwords, the system temporarily blocks you. Wait 15 minutes.

If none of those, message dispatch.

"My password worked yesterday but doesn't today."

Either:

- You changed it and forgot. Try your previous one.
- An administrator reset it (would happen after a security event or your request).
- Your account was disabled. Ask dispatch.

"The page is blank."

1. Refresh the page (pull down on mobile, or tap the refresh icon).
2. Sign out and sign back in.
3. Clear your browser's cache for `app.logisx.com`.
4. Try a different browser.

If you've done all that and the page is still blank, message dispatch — there may be a server-side issue.

"I see the 'Location Access Required' screen but I'm sure I granted location."

This means the browser's permission has reverted to denied or "ask every time." Re-grant:

- **Chrome (Android):** tap the lock icon in the address bar → Permissions → Location → Allow.
- **Safari (iPhone):** Settings → Safari → Location → Allow. And Settings → Privacy → Location Services → make sure it's on for Safari.

Then refresh the page.

"My GPS shows the wrong location."

1. **Is the LogisX tab open?** GPS pauses if the tab is closed.
2. **How's your signal?** Weak signal = inaccurate or stale GPS.
3. **How long since you came out from indoors?** Phone GPS takes 30–60 seconds to re-acquire after being inside a steel warehouse.
4. **Is your phone hot?** Throttled phones can have erratic GPS.

Move outside, stand still 30 seconds, refresh the page. Position should resolve.

"I'm at the shipper but the status didn't auto-advance."

Normal. Geofences miss sometimes, especially in industrial areas with weak GPS or addresses that aren't precisely set.

Update manually. Status tab → tap the next status. Give a brief reason ("auto missed").

"I'm not at the shipper but the status auto-advanced anyway."

You probably drove past the geofence area. Common at truck stops or gas stations adjacent to the shipper.

Update manually back to the previous status. The app will let you go backwards if you give a reason.

"I declined a load by accident."

Message dispatch right away. They can re-offer it if both of you agree. The decline isn't permanent.

"I accepted a load and it disappeared from my list."

Pull-to-refresh the Loads tab. If it's still gone:

- The assignment may have been cancelled by dispatch.
- The load may have been reassigned to another driver.
- Your account may have been logged out and re-logged with stale data.

Message dispatch to confirm what's going on.

"I uploaded a POD but the system says it didn't upload."

Try once more. If it keeps failing:

- **Check signal.** Weak signal kills photo uploads (large files).
- **Try a smaller photo.** If your camera shoots at maximum resolution (huge files), the upload may be timing out. Most phones have a setting to reduce photo size.
- **Use Wi-Fi if available.** Truck stops often have free Wi-Fi.
- **As a last resort:** text or email the POD to dispatch. They can upload it from their side.

"The POD upload says 'success' but dispatch can't see it."

Rare but possible. Two checks:

- **Refresh the load** on your side. Does the upload still show in the documents list?
- **Try uploading again.** A second upload is fine — both PODs will be on the record.

If dispatch still can't see anything, escalate.

"My expense OCR read the receipt wrong."

Edit the fields before saving. The OCR is a convenience; you're the final authority. If a specific vendor's receipts are consistently misread (some thermal printers are hard to OCR), let dispatch know — they can flag the issue.

"The expense form won't let me save."

Common causes:

- **Required field missing.** Check that Type, Amount, and Date are all filled in.
- **Photo upload pending.** If you took a photo and it's still uploading in the background, the form may be waiting. Give it a few seconds.
- **Bad signal during save.** If your signal drops mid-save, the form gives up. Try again on better signal.

"My invoice is missing a load I ran."

The load may be:

- **Not yet rolled into this week's invoice.** Invoices generate weekly; a load delivered Saturday night may land on next week's invoice depending on the cutoff.
- **Attributed to the wrong driver.** The driver name on the load might be a typo or assigned to someone else. Message dispatch with the load ID.
- **Cancelled or soft-deleted.** A load that was cancelled drops out of invoice math. If you ran a load that someone later cancelled (rare), it'll be off the invoice.

Message dispatch with the load ID and the period you expected it on.

"My pay total looks wrong."

Don't just complain — be specific. Check:

1. **Are all your loads listed?** Count them, compare to what you remember.
2. **Are the active days right?** For daily-rate pay, count the calendar days each load actually spanned.
3. **Are the rates right?** For owner-op, compare to what the rate con showed for each load.

Then message dispatch with the specifics. "Load LD-3492 ran Mon-Wed but invoice shows 2 days, should be 3" is easy to verify and fix.

"The map doesn't load."

Maps use Google's API. If they don't load:

- Check your connection. Maps need a moderately good signal.
- Refresh.
- If maps don't load anywhere in the app for hours, escalate — there may be a Google API issue.

"I lost cell signal and now my updates didn't go through."

The app **queues** position reports and other small updates locally when offline, then sends them in a burst when signal returns. You don't have to do anything; just wait.

POD photo uploads are **not** queued — they retry once, then fail if signal is bad. You have to manually retry from the same screen when signal is back.

"I closed the tab and now nothing is updating."

Open the tab again. GPS will resume reporting within a minute. Status will refresh on the first navigation.

If you've been away for an hour or more, refresh the page completely (don't just open the cached version).

"My phone died, came back up an hour later, app is acting weird."

Sign out and back in. This resets any stale state in the browser.

"Dispatch isn't responding."

If it's during their business hours and they haven't replied in 30+ minutes, **call**. Don't keep messaging into the void.

If it's after hours (evening, weekend) and you have a real issue, use the after-hours phone line. Dispatch told you the number during onboarding; check your email for it.

"I think the app crashed."

Browser apps don't really "crash" the way installed apps do — they just stop responding or show an error. Refresh first. If refresh doesn't help, sign out and back in. If that doesn't help, restart your phone.

"Something is wrong that's not in this list."

Message dispatch with:

- What you were trying to do.
- What you saw instead (a screenshot helps).
- The load ID involved if any.
- Whether it's blocking your work right now.

That's enough information for dispatch to start investigating.

When to escalate

If dispatch can't resolve an issue, they'll escalate to LogisX technical support. You don't need to bypass dispatch and contact tech support yourself — that's their workflow.

The exception: in a true emergency (truck broken down on a highway, accident, medical issue), call 911 first, then dispatch, then anyone else.

Frequently Asked Questions

Questions drivers ask most often, in no particular order. Skim for yours.

About the app itself

Q. Do I need to install anything? No. LogisX runs in your phone's browser. Go to app.logisx.com and sign in.

Q. Does the app work offline? Mostly no. Some local state is cached (the app doesn't go totally blank when signal drops), but anything that needs to talk to the server — accepting a load, sending a message, uploading a POD — needs at least some connection. Position reports are queued and sent in batch when signal returns.

Q. Will the app run in the background? Sort of. When the LogisX tab is open but in the background (another app is in front), the phone may slow down GPS reporting to save battery. Keep the tab in front while you're on a load if you can.

Q. Does it work on a tablet? Yes. The layout adapts to larger screens. Many drivers prefer a 7–10 inch tablet on a dash mount over their phone.

Q. Can I use the app on a laptop or desktop? Yes, but you won't be able to report GPS (laptops have no GPS) so the position-tracking features won't work. Sign in from a laptop is fine for reading messages, reviewing invoices, etc.

Q. Will I get push notifications on my phone? No, not in the traditional OS-level sense. The app shows in-app notifications (badges, banners) when you have it open. For urgent stuff, dispatch will call.

About loads and pay

Q. Can I see other drivers' loads? No. You see only your own.

Q. Can I see what dispatch sees on the tracking map? No. The dispatcher's tracking view is for their workflow.

Q. How is my pay calculated? Either \$250 per unique active day (daily-rate drivers) or a percentage of load revenue (owner-operators). Check your contract for which applies and at what rate.

Q. What's an "active day"? For daily-rate pay: any calendar day you spent some portion of on a load. Pickup Monday + delivery Wednesday = 3 active days. Three short loads all on Thursday = 1 active day.

Q. What if a load spans midnight? Each calendar day touched counts. A pickup at 11 PM Monday and a delivery at 2 AM Wednesday is Monday + Tuesday + Wednesday = 3 days, even though it took only 27 hours.

Q. Can I decline a load without consequences? Generally yes, if you have a legitimate reason (HOS, equipment problem, schedule conflict). Repeated unexplained declines may affect future assignments. Be honest with dispatch when you decline.

Q. What if my truck breaks down mid-load? Call dispatch. They'll either arrange repair or reassign the load to another driver. You may need to deliver the trailer to the new driver's location for transfer.

Q. Can I take loads I find myself (e.g., from a load board)? No. LogisX assigns loads. Independent load-finding isn't part of the workflow.

Q. Why does the app sometimes show the rate and sometimes not? Rate visibility depends on configuration. Some companies show rates to drivers (you see what the broker paid); others don't. Ask your administrator if you're unsure.

About status and GPS

Q. Why didn't my status auto-advance when I arrived? The geofence missed. Common at urban or industrial sites with weak GPS. Update manually.

Q. Why did my status auto-advance when I wasn't there? You probably drove through the geofence (a gas station or truck stop next to the location). Update back manually if the status is wrong.

Q. Can dispatch see where I am all the time? While you're signed in and have a load accepted, yes. When you're signed out or have no active load, no. The app reports GPS only during active work.

Q. Does the app track me when I'm off duty? No. Once your status is "Delivered" or "POD Received" and the load is closed, GPS reporting stops. Outside of an active load, no GPS reporting happens.

Q. What if I forget to sign out? Doesn't matter. The app only tracks GPS during active loads. Being signed in with no active load doesn't trigger position reports.

Q. Why does my position bounce around on the map? Probably GPS error in marginal signal areas (canyons, urban centers, near big buildings). The map smooths it as much as possible; some bouncing is unavoidable.

About documents

Q. Can I download my truck's documents to my phone? No, by design. You can view them in the app whenever you need to.

Q. Will an officer accept the documents on my phone? In most states, yes. Federal regulations explicitly allow electronic display. A few officers still prefer paper — keep paper as backup.

Q. The documents list is empty. Either no documents have been uploaded for your truck, or none are flagged driver-visible. Message dispatch.

Q. The registration on the app expired. What do I do? Don't drive on an expired registration. Message dispatch — they may have a newer version that just isn't uploaded yet.

Q. I switched trucks today. Why are the documents the same? The app updates the document list when your truck assignment changes. If you're not seeing the new documents, refresh the page or sign out and back in.

About expenses

Q. Do I have to log every expense? Anything you want reimbursed, yes. Personal expenses (your food, motel, etc.) don't go in the app.

Q. The AI got my receipt wrong. Why? Receipt OCR works best on clear, well-lit, flat photos. Crumpled or faded receipts can mislead it. Edit the field; the AI is a starting point, not a replacement for you.

Q. Can I edit an expense after I save it? No. Submit a new one and ask dispatch to reject the wrong one.

Q. How long until my expense is reimbursed? Approved expenses are reimbursed on your weekly invoice. The cadence is the same as your pay.

Q. Are tolls automatically tracked? If your truck has an automatic toll device (E-ZPass, etc.) the tolls go through the device and you don't log them. If you pay cash, log it.

About messaging

Q. Can I message other drivers? No. Messaging is between you and dispatch only.

Q. What if my dispatcher is off-duty? A different dispatcher covers their off hours. Send your message to the dispatch channel and whoever is on duty will pick it up.

Q. Are messages logged? Yes. Every message is stored in the database. Dispatch and admin can review historical messages.

Q. Can I delete a message I sent? No. Once sent, it stays.

About onboarding

Q. How long does onboarding take? Variable. Document signing is about 30 minutes. The drug test depends on when the appointment slot is available. FMCSA Clearinghouse enrollment is yours to complete. Training varies by course. Most drivers complete onboarding in 1–3 days.

Q. Can I run loads while onboarding is incomplete? No. The lock screen blocks everything until onboarding is done.

Q. Why so many forms? Each form is required for legal, regulatory, or insurance reasons. The independent contractor agreement is the master contract; the policies cover specific behaviors; FMCSA consent is federally required. None are decorative.

About safety and HOS

Q. Does the app track my hours of service (HOS)? Not currently. HOS is tracked by your ELD (typically Routemate or similar hardware in the truck). The LogisX app shows where you are and what status your load is in; it doesn't manage your duty time.

Q. What if I'm running out of HOS? Park somewhere safe and finish the load tomorrow. Message dispatch with your expected restart time. They can adjust the load schedule with the broker.

Q. Can dispatch see my HOS? Through the ELD integration, yes — they can see your drive time, on-duty time, and remaining hours.

About the company

Q. Who do I talk to about something not related to dispatch? HR questions, payroll questions, benefits questions — talk to your administrator (the person who handles onboarding and admin tasks). Their contact info was in your welcome email.

Q. Who is the CEO? Deshorn King.

Q. What if I want to give feedback about the app itself? Tell dispatch. They'll relay it. The app is actively developed and feedback from drivers shapes future improvements.

Q. Can I refer a friend to drive for LogisX? Probably yes — most carriers welcome referrals. Ask your administrator about the process.

Things drivers don't usually ask but should

Q. What's my username if I forget? It's typically a code like `LogisX-XXXX` (the number is unique to you). Your administrator can tell you, or check your welcome email.

Q. Where can I find a copy of my contractor agreement? Sign in, go to **Kit** tab → Documents → look for "Independent Contractor Agreement." Open it, take a screenshot if you want to save it.

Q. Where can I see my full driving history with LogisX? Loads tab → Completed (or filter by date). You'll see every load you've delivered.

Q. How long are messages and load history kept? Indefinitely. Nothing is deleted.

Q. Can I see my own driver rating? Most likely yes — check your profile. Some companies share ratings with drivers; others keep them internal.

That's the most common stuff. If you have a question that's not here, message dispatch or your administrator. Most "how do I..." questions have an answer that's already in the workflow somewhere; we're happy to point you to it.

Good roads.
