Growing concerns

Welcome

You've invested in the LogisX fleet. The truck(s) you fund are operated by professional drivers under LogisX management, generating revenue you share. This guide is everything you need to know about your investor dashboard, how to read the numbers, and how to stay connected to operations.

What being a LogisX investor means

You own one or more trucks. LogisX manages them — finds the loads, hires the drivers, handles dispatch, deals with maintenance, manages compliance. You receive your share of the profit each truck generates.

The split is laid out in your Master Participation & Management Agreement (typically 50/50 of net profit, after expenses). Your dashboard shows exactly how that calculation works for each month and overall.

You are **not** an employee or a passive lender — you're an asset owner with professional management. That's reflected in:

- **Your ownership.** Each truck is in your name (or your LLC).
- **Your visibility.** The dashboard shows you everything happening on your fleet.
- **Your earnings.** Real profit-sharing, not a fixed return.
- **Your documents.** Each agreement you signed is in your portal.

What this guide covers

The chapters that follow walk through:

- **Quick start** — signing in, what you'll see first.
- **The dashboard sections** — what each card and chart means.
- **Earnings calculation** — exactly how the numbers are derived, step by step.
- **Monthly reports** — generating PDFs for your records or accountant.
- **Fleet breakdown** — reading per-truck performance.
- **Document portal** — accessing your signed contracts and tax forms.
- **Communicating with operations** — when to message, what to expect.

- **Growing your fleet** — adding trucks over time.
- **Tax and 1099** — what to expect at year-end.
- **Troubleshooting** — common dashboard questions.
- **FAQ** — investor-specific answers.

What this guide doesn't cover

- **Operations management** — load assignment, driver communication, day-to-day dispatch. That's LogisX operations' job, not yours.
- **Maintenance decisions** — when to repair, who to use. LogisX handles. You see the costs.
- **Financial accounting** — tax preparation, payroll. You handle on your side; we provide the data.

If you find yourself wanting to do operational work, talk to LogisX leadership about a different arrangement — that's a different relationship than investor.

What to expect from this relationship

A few things you should expect:

Transparency. Every truck's revenue, expense, and pay calculation is visible on your dashboard. The math is shown in full. Nothing is hidden.

Communication. LogisX operations is reachable through the in-app chat and (for major matters) phone. Response times during business hours are minutes to hours; not days.

Reporting. You can download a PDF report any time covering any date range. Use it for your accountant, your records, or just understanding your investment.

Honest accounting. When something goes wrong — a damaged truck, a load loss, a slow month — you'll see it in the numbers. The system doesn't paper over bad weeks.

Professional management. Your trucks are run by experienced dispatch and driven by vetted drivers. The same standards apply to your trucks as to LogisX-owned ones.

What we expect from you

A few things from your side:

Read your contract. The Master Participation & Management Agreement, your Vehicle Lease, your Exhibit A — they're the source of truth for your relationship with LogisX. Refer back to them when you have questions about the structure.

Use the dashboard. Sign in at least monthly. Reviewing your numbers keeps both you and LogisX accountable.

Communicate questions. If something doesn't make sense, ask. We'd rather answer 100 questions than have an investor confused or unhappy.

Trust the process but verify. The dashboard shows what's happening. Compare to your bank deposits and your tax forms. Things should reconcile.

Be patient with bad months. Trucking has cycles. A slow month isn't a crisis; sustained problems are. Communicate either way.

A note on returns

Trucking returns aren't index-fund-like. You'll see months with strong profits and months with smaller (or, rarely, negative) returns. Over a year, the average matters more than any single month.

Factors that move returns up:

- High demand for freight (busy season, supply chain shocks).
- Good driver assignment to your trucks (productive drivers).
- Low fuel prices.
- Few maintenance issues.

Factors that move returns down:

- Slow freight market (post-holiday lulls).
- Major maintenance events (a transmission, an engine).
- High fuel prices.
- Driver-specific issues (sick driver, equipment failures).

LogisX manages what we can; some of it is outside anyone's control. The long-term average is what matters.

How to use this guide

Read it once when you start. Keep it as a reference for specific questions. Each chapter is self-contained — you can jump to one without reading the others first.

If you're not yet onboarded (still signing documents), this guide gives you the picture of what comes next.

Welcome aboard.

Quick Start

What you'll see when you sign in, the main navigation, and the typical monthly rhythm of being a LogisX investor.

Signing in

Go to `app.logisx.com`. Enter your username and password. You land on the **Investor Dashboard** at `/investor`.

There's no sidebar; the dashboard is the home and the destination. You can navigate to **Trucks** to see your fleet detail.

The hero header

The top of your dashboard:

- **Your profile photo** (you can update it).
- **Your name.**
- **"Performance overview"** as a subtitle.
- **Date range picker** — pick a month, a custom range, or all-time.
- **Download Report** button — generates a PDF for the selected range.
- **Refresh** button — force-reload the data (rarely needed since the dashboard updates in real time).

What's below the hero

A series of sections, top to bottom:

Earnings section

The most-watched section. Shows:

- **Your Earnings for the selected month** — your 50% share of net profit.
- **Breakdown table** — Revenue minus Driver Pay minus Fixed Costs minus Trip Expenses = Net Profit, divided by 2.
- **Month selector** — jump between months.
- **All-time totals strip** — lifetime numbers.

Fleet Breakdown

A card per truck showing:

- Truck info.
- Current status (Active, Available, Maintenance).
- Currently-assigned driver.
- This month's revenue for that truck.

Click into a truck for the full record.

Production section

Operational metrics:

- Miles driven.
- Loads completed.
- Utilization percentage.

Cash Flow section

A line chart showing revenue over time.

Asset section

Your trucks as assets with acquisition dates and book values.

Document Portal

Every document you've signed during onboarding, plus any historical reports you've downloaded. You can view or re-download from here.

Messages

Direct chat with LogisX operations.

Your trucks view

Sidebar or top-nav → **Trucks**. You see only the trucks you own. Click into any truck for:

- VIN, plate, year, make, model.
- Mileage.
- Assigned driver (if any).
- Document list (registration, insurance, inspection).
- Owner ID (yours).
- Historical drivers (if applicable).

The monthly rhythm

A typical month flow:

Start of the month:

- Sign in. Glance at the Earnings section to see the prior month's final numbers.
- Compare to your expectations.
- Download a PDF report for the prior month (for records).

Mid-month:

- Sign in. Check current-month accruing earnings.

- Look at the Production section — are loads being run?
- Watch for any maintenance status on your trucks.

End of month:

- Earnings for the month finalize as loads close out.
- Distribution typically processes in the first week of the following month.
- Your bank account should reflect your share.

What auto-updates

The dashboard updates in real time:

- A load delivers → revenue updates.
- An expense gets approved → it shows in the breakdown.
- A driver is reassigned to one of your trucks → Fleet Breakdown updates.
- Status of one of your trucks changes → reflected immediately.

No need to refresh manually. The data is live.

When to engage operations

You don't need to micromanage. LogisX handles operations. Reach out when:

- **A number on your dashboard doesn't make sense.** Ask for clarification.
- **You want a custom report** (date range, specific format).
- **You're considering adding to your fleet** or making a structural change.
- **You have a question about your documents** or contract.
- **You're confused about anything.** Easier to ask than to assume.

Don't message about routine operational stuff (which driver should run a load, what time a pickup should be). That's not your decision; let LogisX handle it.

Profile and preferences

From the hero header, tap your profile photo to access:

- **Photo upload** — update your portrait.
- **Contact info** — update your email or phone.

- **Notification preferences** — adjust what you get emailed.
- **Change password** — set a new password.

Save changes to apply.

A 5-minute monthly review

A minimal habit that catches issues:

1. **Sign in.**
2. **Look at the Earnings section** for the prior month. Is the number what you expected?
3. **Skim Fleet Breakdown** for each of your trucks. Anything in Maintenance?
4. **Check Production.** Miles and loads consistent with prior months?
5. **Download a PDF report** if you want it for your records.

Five minutes. Done. If you spot anything odd, message operations.

What you don't have access to

- **Other investors' data.** You see only your fleet.
- **Driver personal info.** You see assigned driver names but not their full personal details.
- **Broker information.** Loads have broker references internally; you see revenue but not the broker name typically.
- **Company-wide financials.** Only your slice.
- **Operational controls.** No buttons to assign loads or move drivers.

This is intentional — investor read-only access lets you trust the numbers without being responsible for the operation.

Common first-time questions

"Why is my earnings \$0 this month?" Could mean no loads have been delivered yet on your trucks, or there's a data attribution issue. Open Fleet Breakdown — are your trucks active? If yes, message operations to investigate.

"Why does the dashboard show a number different from what I expected?" Look at the breakdown table. The formula is transparent. Compare each line to what you expected.

"How do I see my agreement?" Document Portal. The Master Participation Agreement and your Vehicle Lease should be there as signed PDFs.

"When do I get paid?" Distribution typically processes the first week of the following month. Direct deposit to the bank account you set up during onboarding.

"What if I want to add a truck?" Message operations. It involves a new Vehicle Lease and capital coordination — outside the app workflow.

Now turn the page for the deep dive into each dashboard section.

The Dashboard, Section by Section

This chapter is a tour of every section on the investor dashboard. What it shows, what it means, and how to read it.

The hero header

What you see:

- Your profile photo.
- Your full name (the name you signed your agreement under).
- "Performance overview" subtitle.
- **Date range picker**.
- **Download Report** button.
- **Refresh** button.

What to use it for:

The **date range picker** is the most-used control. Pick a single month (e.g., April 2026) or a custom date range to focus the whole dashboard on that period. Everything below the hero — earnings, fleet breakdown, production, charts — filters to the chosen range.

The **Download Report** button generates a PDF covering the selected range. Useful for your records or your accountant.

The **Refresh** button forces a data reload from the server. Rarely needed — the dashboard updates in real time. But if a number looks stale and you want to be sure, refresh.

Earnings section

The headline section. Shows your share of the net profit for the selected period.

The main card displays:

Your Earnings (50% of net profit)
\$X,XXX

Beneath, a breakdown table:

LINE	AMOUNT
Revenue (from completed loads)	\$XX,XXX
– Driver Pay	(\$X,XXX)
– Fixed Costs (insurance, ELD, IRP, HVUT, maintenance)	(\$X,XXX)
– Trip Expenses (fuel, repairs, tolls, etc.)	(\$X,XXX)
Net Profit	\$XX,XXX
÷ 2 (your share)	\$XX,XXX
Your Earnings	\$X,XXX

A **month selector** lets you flip between months without changing the global date range picker. Useful for comparing month-over-month.

An **all-time totals strip** beneath shows lifetime revenue, lifetime expenses, lifetime net profit, lifetime earnings.

Each line is clickable — click for the per-load detail behind the number (which loads contributed to revenue, which expenses are in trip expenses, etc.).

The full math is explained in the [Earnings Calculation](#) chapter.

Fleet Breakdown section

Per-truck cards. For each truck you own:

- **Truck unit number** (e.g., TRK-101).
- **Make, model, year.**
- **Status** — Active, Available, Maintenance.
- **Assigned driver** (if any).
- **Last known location** (city, state).
- **This month's revenue** for that truck.

Click any card for the full truck record:

- VIN.
- License plate.

- Mileage.
- Documents (registration, insurance, inspection).
- Acquisition date.
- Historical drivers.

If you own multiple trucks, this is where you see relative performance — which truck is generating more revenue, which is idle.

Production section

Three operational metrics:

- **Miles driven** during the selected period.
- **Loads completed** during the period.
- **Utilization percentage** — how much of the period your trucks were on active loads.

These tell you whether your fleet is working. A truck that earns well but only ran 3 loads has a different long-term outlook than one that earned the same on 12 loads.

A truck idle with high utilization but low revenue might be running low-rate freight (worth a conversation). A truck with low utilization is sitting more than it should (worth investigating).

Cash Flow section

A line chart of revenue over time. Typically shows monthly revenue for the prior 12 months (depending on your install).

Use it to:

- **Spot trends.** Is revenue growing month over month? Stagnant? Declining?
- **See seasonality.** Trucking has busy and slow seasons. Your chart should reflect them.
- **Compare to expectations.** Is this year tracking similar to last year?

Hover over points to see exact monthly values.

Asset section

Your trucks as assets. For each:

- **Truck.**

- **Acquisition date.**
- **Book value** (depreciation-adjusted).
- **Status.**

Useful for tax planning and equity discussions with leadership.

Tax Shield and Recession sections (if applicable)

Depending on your install, you may see additional sections:

- **Tax Shield** — depreciation and other tax considerations.
- **Recession Analysis** — modeling for downturns.

These are informational; consult your tax preparer for actionable advice.

Document Portal

Every document you've signed and every report you've generated. Categories:

- **Onboarding documents** — Master Participation Agreement, Vehicle Lease, W-9, Exhibit A.
- **Historical reports** — PDFs you've downloaded for past periods.
- **Operating documents** — anything else operations has shared with you.

Click any document to view inline. Tap the download icon to save a copy locally.

Configuration panel

Profile-related settings:

- **Profile photo** upload.
- **Notification preferences** — what you get emailed about.
- **Contact info** — phone, email.
- **Change password.**

Chat with operations

In-app messaging. Same as drivers chat with dispatch; you chat with operations.

Use for:

- Questions about specific numbers on your dashboard.
- Reporting truck issues you've observed.
- Requesting custom reports.
- Anything else needing a response from the team.

What you won't see

A few things absent by design:

- **Other investors' data.** You see only your fleet.
- **Driver personal info beyond name.** Phones, addresses, employment history — operations' to manage, not yours.
- **Specific broker names per load.** Your dashboard shows revenue per load but typically not the broker name. (This may vary by your install.)
- **Operational controls** — assigning, dispatching, status updates. Read-only.

This isn't because of secrecy — it's because the data isn't your responsibility. Operations handles those things.

Mobile vs. desktop

The dashboard works on both. On mobile, sections stack vertically and some layouts collapse. The data is the same.

For deep reviews (comparing months, downloading reports for your accountant), desktop is more comfortable. For a quick "what's my month look like?", mobile is fine.

How often to check

A few patterns:

- **Daily check** is unnecessary unless you're actively monitoring a specific issue.
- **Weekly check** is more than enough for most investors.
- **Monthly review** is the minimum recommended habit. Catch the prior month's final numbers, scan for surprises.

You can always sign in more often, but you don't need to.

Pro tips

- **Bookmark the dashboard URL** and any specific monthly view you reference often.
- **Use the date range picker actively.** Comparing the same metrics across different periods is more useful than just looking at "this month."
- **Take screenshots when you see something interesting.** A revenue spike, an unusual expense — capture it. Helpful when you message operations to ask about it.
- **Download reports periodically.** Don't wait until tax time and download 12 months of reports in a hurry.

The chapters that follow dig into each major section in more detail.

Earnings Calculation — How the Math Works

This chapter is the formula behind your earnings number, step by step, with examples. Read it once to understand exactly what's happening; refer back when a number surprises you.

The full formula

For a given period (typically a month):

Revenue

- Driver Pay
- Fixed Costs
- Trip Expenses

= Net Profit

Your Earnings = Net Profit ÷ 2

The "divide by 2" reflects your 50/50 split with LogisX per your Master Participation Agreement. If your agreement has a different split, the divisor adjusts accordingly.

Step 1: Revenue

Revenue = sum of the **Payment** column from Job Tracking for all completed loads run on your trucks during the period.

What counts as a load run on "your" truck:

- The load's **Owner ID** column matches your investor record ID. (Primary attribution.)
- OR the load's driver matches a driver in your **company** (Carrier Database fallback).

A load counts in the month it was **assigned**, not the month it was delivered. This is a CEO decision to align with how the dispatcher dashboard reports revenue.

Excluded:

- **Cancelled loads** (status matches `Cancelled`).
- **Soft-deleted loads** (in the `deleted_loads` table).

Both exclusions are centralized in the `excludeDroppedLoads` helper used across the system.

Example

You own TRK-101 and TRK-102. In April:

- TRK-101 ran 4 loads: \$2,000, \$1,800, \$2,400, \$1,500 = **\$7,700**.
- TRK-102 ran 3 loads: \$2,200, \$2,500, \$1,900 = **\$6,600**.
- One load on TRK-102 was cancelled: \$1,800 not counted.

April Revenue = \$14,300

Step 2: Driver Pay

Driver Pay = what you owe the drivers for running your loads in the period.

Two pay structures:

Daily Rate Drivers

Driver Pay = \$250 × unique active calendar days

An "active calendar day" is any day a driver was on at least one load. Multi-day loads count every day they spanned (pickup Mon → delivery Wed = 3 days). Multiple same-day loads count as 1 day.

Deduplication happens across all loads for the same driver in the period.

The \$250 default rate comes from each truck's `driver_pay_daily` setting; can vary per truck.

Owner-Operator Drivers

Driver Pay = $\sum (\text{load_revenue} \times \text{driver_pay_percentage})$ for each load

The percentage comes from each load's pay split (typically 70% to driver, but configurable). Calculated per load.

Example

TRK-101 has daily-rate driver Lesline:

- 4 loads spanning Apr 5–15. Unique active days: Apr 5, 6, 7, 8, 9, 10, 14, 15 = 8 days.
- $8 \times \$250 = \mathbf{\$2,000}$.

TRK-102 has owner-op driver Kenrick at 70%:

- 3 loads at \$2,200, \$2,500, \$1,900.
- Driver pay: $\$1,540 + \$1,750 + \$1,330 = \mathbf{\$4,620}$.

Total Driver Pay = \$6,620

Step 3: Fixed Costs

Fixed Costs = the recurring cost of operating each truck. Per truck per month:

```
Insurance (monthly)
+ ELD Service (monthly)
+ HVUT (annual / 12)
+ IRP (annual / 12)
+ Maintenance Fund Reserve (monthly)
= Truck's monthly fixed cost
```

These come from the truck record. Examples (per truck, per month):

- Insurance: \$250
- ELD: \$45
- HVUT (annual ÷ 12): \$46
- IRP (annual ÷ 12): \$150
- Maintenance fund: \$800
- **Total: \$1,291 / truck / month**

Note: fixed costs accrue **only for months the truck has existed in your fleet**. They don't backdate to before your acquisition.

Example

TRK-101 monthly fixed: \$1,291. April: \$1,291. TRK-102 monthly fixed: \$1,381 (slightly different rates). April: \$1,381.

Total Fixed Costs = \$2,672

Step 4: Trip Expenses

Trip Expenses = approved expenses (fuel, repairs, tolls, lumpers, scale fees, etc.) submitted by drivers for loads run on your trucks.

Only **approved** expenses count. Pending and rejected expenses are excluded from your earnings until they're decided.

Expenses are attributed to your trucks via the load's truck assignment.

Example

TRK-101 expenses in April:

- Fuel: \$1,200.
- Repairs (tire): \$400.
- Tolls: \$80.
- Scale: \$30.
- **Subtotal: \$1,710.**

TRK-102 expenses:

- Fuel: \$1,400.
- Lumpers: \$200.
- **Subtotal: \$1,600.**

Total Trip Expenses = \$3,310

Step 5: Net Profit

Now we put it together:

Revenue	\$14,300
- Driver Pay	(\$6,620)
- Fixed Costs	(\$2,672)
- Trip Expenses	(\$3,310)
= Net Profit	\$1,698

In this example: April was a slow month, expenses were elevated, net was modest.

Step 6: Your Earnings

Your Earnings = Net Profit ÷ 2 = \$1,698 ÷ 2 = \$849

The other \$849 goes to LogisX as management compensation.

Why your number might be different

Compared to a back-of-envelope calculation, the actual numbers can differ for several reasons:

1. **Cancelled or soft-deleted loads** drop out of revenue. If you're counting "what I expected to earn" based on loads you remember, but some were cancelled, the actual number is lower.
2. **Date attribution.** A load assigned in late April but delivered in early May counts in April (not May). If you're mentally counting by delivery date, you'll be off.
3. **Driver pay can be higher than expected.** Multi-day loads count multiple days for daily-rate drivers. A 4-day load is \$1,000 in driver pay (4 × \$250), which is substantial.
4. **Fixed costs are constant.** Even in a low-revenue month, fixed costs accrue. They don't scale with revenue.
5. **Pending expenses** aren't included. Once approved (later in the cycle), they apply retroactively to the month, reducing your earnings on a subsequent refresh.

When to question the math

A few patterns are worth checking:

Revenue much lower than expected. Check:

- Were loads cancelled?
- Are your trucks' Owner IDs correct on the loads?
- Did some loads get attributed to a different investor?

Driver pay much higher than expected. Check:

- Are the load dates correct in the system? A typo can inflate active-day counts.
- Is the driver's pay_type correct (daily vs. owner-op)?

Fixed costs higher than expected. Check the truck record for the monthly amounts. They should match your contract.

Trip expenses unusually high. Look at the per-truck breakdown to see which truck has elevated expenses. Then drill into specific expenses.

For any of these, message operations. They can show you the underlying data.

Comparing months

Your earnings month-to-month will vary. Factors:

- **Number of loads run** — directly drives revenue.
- **Average load rate** — higher per-load rate = higher revenue.
- **Multi-day vs. short loads** — multi-day loads earn more revenue per truck-day but also higher driver pay per truck-day (for daily-rate drivers).
- **Maintenance events** — a transmission repair can wipe out a month's earnings.
- **Fuel prices** — variable but a big line.
- **Driver assignment** — productive drivers vs. less-productive ones make a real difference.

A 30-50% month-to-month swing isn't unusual in trucking. Worry about sustained declines, not single bad months.

How LogisX manages

A few decisions LogisX makes that affect your earnings:

- **Which loads to take.** Higher-rate loads are obviously better; LogisX optimizes for revenue per truck-day.
- **Which driver runs your truck.** Productive drivers generate more revenue.

- **When to do major maintenance.** Preventive maintenance is cheaper than reactive; LogisX schedules.
- **Operational efficiency.** Less deadhead = more revenue per gallon.

You don't make these decisions, but you see their effects in your dashboard. If something looks consistently off, talk to operations.

What you can do

- **Be patient on individual months.** Trucking has cycles.
- **Watch quarterly and annual trends.** Those matter more than monthly variance.
- **Ask questions about your numbers.** The math is transparent; we'll walk through any line.
- **Set realistic expectations.** Trucking returns aren't index-fund-like. Some months disappoint; others delight.

Pro tips

- **Use the dashboard's drill-down clicks.** Each line in the breakdown is interactive. Click to see the loads or expenses behind it.
- **Compare same-month-prior-year.** April this year vs. April last year is more apples-to-apples than April vs. March.
- **Generate a monthly PDF report** at the end of each month and keep them. They're a paper trail for the year.
- **Don't get fixated on one month.** A bad month + a great month averages out. The annual number is what matters.

Monthly Reports — Generating and Reading

Beyond the live dashboard, you can generate downloadable PDF reports for any date range. This chapter is how.

Generating a report

From the hero header at the top of your dashboard:

1. **Pick a date range.** The picker accepts single months, custom ranges, year-to-date, all-time.
2. **Click Download Report.**
3. **Wait a few seconds** for the PDF to generate.
4. **The PDF downloads** automatically (or appears in your browser's downloads).

What's in the report

The PDF includes:

- **Cover page** — your name, the period covered, the date generated.
- **Summary** — total revenue, total expenses, total driver pay, net profit, your earnings.
- **Monthly breakdown** — if the range spans multiple months, each month is shown separately.
- **Fleet breakdown** — per-truck performance for the period.
- **Per-load detail** — every load that contributed to revenue, with Load ID, pickup/delivery cities, dates, rate.
- **Expense detail** — every approved expense in the period.

The report is comprehensive enough to be the source-of-truth document for the period.

What to use it for

A few practical uses:

Tax preparation. Hand to your CPA. They can extract revenue and expense numbers for your Schedule C or business tax return.

Quarterly reviews. A quarterly report gives a fuller view than monthly snapshots.

Annual investor letter to your own partners or stakeholders (if you have any).

Year-over-year comparison. Generate the same range from the prior year, compare.

Reconciliation with bank deposits. Your monthly distribution should match the "Your Earnings" line in the report (within timing differences for when payment processed).

Report format

The PDF uses the same branding as your dashboard. Sections are clearly labeled. Tables are readable. Total numbers are prominent.

If the period is more than one month, monthly subtotals appear before the grand total. Useful for spotting trends within the range.

What's not in the report

Some things deliberately not included:

- **Driver personal info beyond name** — privacy.
- **Broker names per load** (typically) — internal use.
- **Internal LogisX accounting** — your slice only, not the company's.
- **Future projections** — historical only.

If you need any of those, message operations.

When the report doesn't match the dashboard

Both pull from the same underlying data. If they show different numbers, possibilities:

- **Different date ranges.** The dashboard view is one range; the report is another. Verify both ranges match.
- **Inclusion of pending expenses.** The dashboard updates as expenses are approved; the report locks the numbers as of the generation time. If you approve an expense after generating the report, the dashboard updates but the report stays as-is.
- **Cache.** Rare, but possible. Refresh and re-generate.

If they truly disagree, message operations.

Frequency

Some patterns for when to generate:

Monthly. Generate a report for the prior month in the first week of the new month. Save it.

Quarterly. Generate a quarter report (Jan–Mar, Apr–Jun, etc.) for quarterly tax payments and reviews.

Annual. Generate a full-year report in early January for tax preparation.

Ad-hoc. Any time something looks unusual on the dashboard and you want to verify.

Storing reports

The reports stay accessible in your Document Portal — you can re-download any historical report you've generated. But also save them locally:

- **Local folder.** A folder per year with monthly PDFs.
- **Cloud backup.** Google Drive, iCloud, Dropbox — wherever you keep important business records.
- **Off-site.** If you're security-conscious, a physical backup or a separate cloud account.

Don't rely solely on the platform — keep your own copies.

Sharing reports

The reports contain financial details about your trucks. Share carefully:

- **Tax preparer** — yes.
- **Personal partners or co-investors** — typically yes (depends on your arrangement).
- **Strangers or potential investors** — generally no without redacting personal details.
- **Public** — never (financial privacy).

You decide who sees them. LogisX doesn't track who you share with.

Customizing reports

The standard report format is fixed. If you need a custom format (different sections, additional metrics), message operations. We can typically generate one-off reports manually for specific needs.

Comparing reports across periods

A few comparison patterns:

Last month vs. this month: generate both, lay side by side, eyeball differences.

Year-over-year: generate same-month prior-year, compare to current.

Trend across a year: generate Jan-Dec of one year, look at the monthly subtotals for the trend.

The dashboard itself shows some of this (cash flow chart, monthly earnings selector), but PDFs let you compare offline at your own pace.

Report integrity

The reports are generated server-side from the same data the dashboard uses. They're not edited or filtered beyond what you specify (date range).

If you doubt a number in a report, you can:

1. **Cross-check the dashboard** for the same period.
2. **Spot-check per-load detail** against the loads list in your Fleet view.
3. **Compare to your bank deposit** for the corresponding distribution period.
4. **Message operations** to walk through the calculation.

The math is transparent and the data is real.

When to ignore the report

A report is a snapshot in time. If you generated a report on April 5 covering March, then on April 10 an expense for March gets approved, the report won't reflect the new expense — but the dashboard will.

Don't treat a monthly report as immutable. Regenerate after any significant retroactive changes.

Pro tips

- **Name files consistently.** "LogisX_2026-04.pdf" beats "report.pdf" when you have a dozen of them.
- **Generate at month-end-plus-a-week.** Gives time for end-of-month expenses to be approved.

- **Compare your bank deposit to the report's Your Earnings line.** They should match (within timing). Discrepancies are worth investigating.
- **Don't lose them.** A year of monthly reports plus an annual report is a substantial paper trail. Worth backing up.

Fleet Breakdown — Reading Per-Truck Performance

Your dashboard's Fleet Breakdown section shows each truck individually. This chapter is how to read those cards and what they tell you.

What you see

Each truck you own appears as a card showing:

- **Truck unit number** (TRK-101, INV-4-A, etc.).
- **Make, model, year.**
- **Status:** Active (assigned to a driver running a load), Available (idle), Maintenance.
- **Assigned driver** (if any).
- **Last known location** (city, state).
- **This period's revenue** for the truck.

If you own multiple trucks, the cards appear side by side or stacked depending on your screen.

Drilling into a truck

Click any card for the full truck record. You'll see:

- **VIN** — vehicle identification number.
- **License plate.**
- **Make, model, year, color** (if logged).
- **Current mileage.**
- **Purchase price and acquisition date.**
- **Documents** — registration, insurance card, annual inspection, cab card, HVUT Schedule 1.
- **Currently-assigned driver** (and how long they've been on this truck).
- **Historical drivers** — who else has driven this truck.
- **Maintenance history** (if logged).

This is the source-of-truth view for a specific truck.

Why per-truck visibility matters

Two reasons:

Relative performance. Two trucks running the same loads should perform similarly. If one is consistently below the other in revenue, something is off — driver issue, mechanical issue, route mismatch.

Accountability for individual assets. Each truck is a separate asset on your books. You want to know which is paying off and which is dragging.

Status meanings

- **Active.** The truck is currently assigned a driver and on a load. Generating revenue.
- **Available.** The truck has an assigned driver but no current load. Not generating revenue right now but is ready to take one.
- **Maintenance.** The truck is in the shop or grounded for an issue. Not available for assignment.

A long stretch in Available status is worth investigating — either the truck-driver pair isn't getting loads (dispatch issue) or the driver isn't able to work (HOS, health, etc.).

A long stretch in Maintenance is worth investigating — what's the issue and what's the resolution timeline.

When a truck has no assigned driver

Cards may show "no driver" status. Reasons:

- **Driver recently left** and the truck hasn't been reassigned.
- **New truck** still being prepped.
- **Driver on extended leave** (vacation, medical).
- **Truck in maintenance** with the driver temporarily moved elsewhere.

If your truck has no driver and the situation isn't temporary, message operations. An idle truck is lost revenue.

Reading documents per truck

Click into a truck → Documents section. You'll see:

- **Registration.**
- **Insurance card.**
- **Annual inspection.**
- **Cab card / IRP.**
- **HVUT Schedule 1.**

These are the documents LogisX is responsible for keeping current on your behalf. Click to view inline.

Driver-visible flag: documents flagged "driver-visible" appear on the driver's phone (Kit tab). Most operational documents are flagged; some internal docs aren't.

Mileage tracking

The truck's mileage on the card and in detail reflects what LogisX records (typically odometer readings from fuel receipts or driver-reported logs).

Mileage tells you:

- **Wear and tear** — a high-mile truck needs more maintenance.
- **Productivity** — high miles in a month = high activity.
- **Future value** — used trucks depreciate with mileage.

If the mileage on a truck seems too low (you know your truck has been running 2,500 miles/week and the dashboard shows much less), the data may not be current. Message operations to update.

Acquisition info

Each truck shows:

- **When you acquired it** — typically when the Vehicle Lease was signed and the truck was registered.
- **Purchase price.**
- **Title status.**

This info is used for asset valuation and tax depreciation. Verify it matches your records.

Maintenance status

A truck in **Maintenance** status:

- Is not assigned new loads.
- Doesn't generate revenue while down.
- May still accrue fixed costs (insurance doesn't pause).
- Will show maintenance notes in its detail (if logged).

Mechanical events are facts of life in trucking. Hopefully short downtimes, occasionally longer ones. The dashboard reflects reality — if your truck is down for a transmission replacement, that's a real event with a real cost.

Truck-driver pairings

LogisX assigns drivers to trucks. Some operational rules:

- **Each driver has one assigned truck at a time.**
- **A truck can have one assigned driver at a time.**
- **Reassignment happens when needed** — driver leaves, truck goes down, productivity issues, etc.

You see the current pairing. You don't decide it. If you have a preference or concern about a pairing, message operations and we'll discuss.

Multiple trucks comparison

If you own multiple trucks, the Fleet Breakdown gives you side-by-side comparison.

Things to compare:

- **Revenue per month.** Are they similar? Outliers?
- **Utilization.** Are they all running consistently or is one sitting?
- **Maintenance frequency.** Are some trucks needing more repairs than others?
- **Driver tenure.** Is one truck on its third driver this year while another has the same driver for two years?

Patterns can signal:

- A specific truck has issues (consistent maintenance, low revenue).

- A specific pairing isn't working (high turnover).
- A specific driver is underperforming.

Don't draw conclusions from one data point. Look at sustained patterns.

When to add to your fleet

Sometimes investors want to expand. Signals it might make sense:

- **Strong revenue per truck** with sustained demand.
- **Available capital** for the acquisition.
- **Risk tolerance** to take on more.

Signals to wait:

- **Inconsistent performance** on current trucks.
- **Heavy maintenance season** on existing fleet.
- **Soft freight market** broadly.

This is your decision; LogisX can advise. Message operations to discuss.

When to remove from your fleet

Trucks come out of service for various reasons:

- **Sold** — you sell to another owner, possibly LogisX.
- **Retired** — too old or too damaged to keep operating profitably.
- **Wrecked** — total loss, insurance proceeds, replace or exit.

In any case, the truck record is updated to reflect the exit. Past revenue and expenses stay attributed to it for historical reporting.

Pro tips

- **Periodically open each truck's detail.** Once a quarter, click through each truck. Verify the documents are current, the driver is assigned, the data looks right.
- **Cross-check truck records to physical reality.** If you have a physical truck inspection or a driver's report, compare to what the system shows.
- **Note any patterns** in your own log. The system shows current state; you can track trends.

- **Investigate underperformers.** A truck consistently below your other trucks deserves a conversation with operations. Multiple causes, multiple possible fixes.

Document Portal

Your Document Portal is where every signed agreement, every generated report, and every truck-related document you can access lives. This chapter is how to use it.

Opening the portal

From your dashboard, scroll to the **Documents** section (or it may be in the sidebar / a separate page depending on your install).

You'll see categorized documents:

- **Onboarding documents** — signed during your initial onboarding.
- **Operating documents** — anything operations has shared with you.
- **Reports** — PDFs you've downloaded from the Download Report button.

Your onboarding documents

After completing the investor onboarding flow, you have these signed documents on file:

Master Participation & Management Agreement

The umbrella contract governing your relationship with LogisX. It defines:

- The profit-sharing structure (typically 50/50 of net profit).
- LogisX's management responsibilities.
- Your responsibilities as the truck owner.
- Dispute resolution.
- Termination clauses.

This is the single most important document — refer to it when contract questions arise. Open and re-read periodically.

Vehicle Lease Agreement (one per truck)

For each truck you own, a separate Vehicle Lease documents:

- **Lessor** — you (the truck owner).

- **Lessee** — LogisX (operating the truck under contract).
- **Vehicle specifics** — VIN, year, make, model.
- **Lease terms** — duration, fees, conditions.
- **Inspection at handover.**

Each Vehicle Lease is signed separately. If you have multiple trucks, you have multiple Vehicle Leases.

Exhibit A (one per truck)

The technical specification of each truck — VIN, equipment list, condition at handover, photos. Attached to the Master Agreement.

W-9 Form

Your tax ID information. Used by LogisX for 1099 issuance at year-end.

Other documents

Depending on your situation:

- **Buy-sell agreement** if you purchased a truck through LogisX.
- **Bank authorization** for direct deposit setup.
- **Personal guaranties** (if applicable).
- **Insurance certificates** specific to your trucks.

Reading a document

Tap or click any document to open it inline in your browser. You can:

- **Zoom in** to read details.
- **Scroll** through multi-page documents.
- **Open in a new tab** for side-by-side comparison.

Downloading a document

Each document has a download icon. Tap to save a copy to your device. Save to:

- **Local folder** for offline access.
- **Cloud backup** (Google Drive, iCloud, Dropbox).

- **Off-site copy** for redundancy.

You should have local copies of every document — don't rely solely on the platform.

Why the Master Agreement matters

A few specific reasons to keep re-reading the Master Agreement:

1. **Profit split.** It defines exactly how your earnings are calculated. If you ever wonder why a number is what it is, the Agreement is the answer.
2. **Capital responsibilities.** It defines who pays for what — major repairs, replacement parts, etc. Important when a \$5,000 transmission appears in your expenses.
3. **Termination terms.** If you ever want to exit, the Agreement defines the process. Months of notice, asset disposition, etc.
4. **Dispute resolution.** If something goes wrong and informal resolution doesn't work, the Agreement defines arbitration or other mechanisms.
5. **Amendments.** If you and LogisX have agreed to changes (different split, additional trucks, etc.), those should be documented as amendments.

Where are the amendments?

If the Master Agreement has been amended, those amendments live in your Document Portal alongside the original. The original Agreement plus its amendments are the full operative document.

If you remember signing an amendment that isn't showing in your portal, message operations. It should be uploaded; if not, ask for a copy.

Tax forms

At year-end:

1099-NEC — if you receive payments as an individual or single-member LLC, you'll get a 1099-NEC documenting the total payments for the year.

K-1 (if applicable) — for some investor arrangements (partnership structure), you'll get a K-1 instead. Depends on your specific arrangement.

These tax forms appear in your Document Portal in January for the prior tax year. Use them for tax preparation.

Historical reports

Every PDF you've downloaded via the Download Report button is preserved in your portal. You can re-download anytime.

If you generated a report for "March 2026" three months ago, you can re-download the same report. (Note: if data was retroactively changed after the original download, the regenerated report may differ slightly.)

Sharing documents

Documents in the portal contain sensitive info. Share carefully:

- **Tax preparer:** yes, the 1099 / K-1 and any relevant reports.
- **Lawyer:** yes, the agreements when needed.
- **Bank:** yes, when applying for loans (proof of business income).
- **Other investors:** depends on your arrangement.
- **Strangers, online forums, social media:** never.

You decide who sees what. The portal doesn't track sharing.

Document expiration and renewals

A few documents have expiration dates:

- **Truck registration** — annually, renewed by LogisX.
- **Truck insurance card** — renewed by LogisX.
- **Annual inspection** — annually.
- **Medical card** for drivers (not your responsibility).

You see them in the portal but you don't actively manage their renewal — LogisX does. If a document is past its expiration date by more than a few days, message operations.

Adding documents

You don't directly upload documents to your portal. If you have something to add (e.g., proof of capital contribution, additional bank info), share it with operations and they'll add it on their end.

When a document is missing

If you signed something during onboarding but it's not showing in your portal:

1. **Check categorization.** Some documents are in specific sections; scroll fully.
2. **Refresh the page.** Sometimes documents lag by a few seconds after upload.
3. **Message operations.** If it's truly missing, they can re-attach.

Document accessibility

The portal works on mobile and desktop. PDFs render in your browser's native PDF viewer.

If a document doesn't render on mobile, download it and open in a PDF reader app. Adobe Acrobat Reader is free and works well.

Privacy

Your portal is **your view only**. Other investors don't see your documents. Drivers don't see them. Only you and LogisX administrators have visibility.

The documents are stored:

- **On LogisX's server** (database + Google Drive backup).
- **In your portal** (downloadable copies).
- **In your local backups** (if you've downloaded).

The platform itself uses secure storage. Your local copies you manage as you would any sensitive file.

Pro tips

- **Download everything in your first week.** Get local copies of every onboarding document.
- **Re-read the Master Agreement quarterly.** Not deeply — just a skim. Keeps the terms fresh.

- **Save tax forms immediately when they appear.** Don't risk a January server hiccup costing you tax-time access.
- **Organize your local copies** by year and type. Future-you will appreciate the structure.

Communicating with Operations

The in-app messaging connects you directly with LogisX operations. This chapter is when to message, what to expect, and how to make the most of the channel.

Opening Messages

From your dashboard, scroll to or navigate to the **Messages** section. You'll see a chat window.

The thread shows your conversation history with operations. New messages from operations appear here in real time.

What to message about

A few common reasons to reach out:

Dashboard questions. "Why is my April revenue lower than March?" "What does this \$400 repair charge cover?" The dashboard math is transparent but specific numbers sometimes need explanation.

Truck observations. If you have direct knowledge about your truck (you've visited the yard, talked to the driver, etc.), share it. "Driver mentioned the AC is acting up." Operations might not have heard yet.

Report requests. "Can you generate a custom report covering Q1 with year-over-year comparison?" The standard PDF report is fine for most purposes; for special asks, operations can prepare one.

Strategic questions. "Thinking about adding a second truck — what's the freight market looking like?" Operations has visibility into trends you may not.

Document needs. "Can you re-send my tax K-1 to my accountant's email?"

Anything else that needs a response from the LogisX team.

What not to message about

Day-to-day operational decisions. Which load to take, which driver to assign, when to do a pickup — those are operations' calls, not yours. You'll see the results in your dashboard.

Driver-specific complaints. If you've heard something about your driver, share factually but don't direct operations on what to do. Personnel decisions are their domain.

Tax advice. LogisX provides the data; your CPA interprets. Don't expect operations to walk through your tax return.

Legal counsel. Contract questions are fine; legal advice isn't. For deep legal questions, your attorney.

Response times

Typical:

- **Business hours, weekdays:** minutes to a couple of hours.
- **Evenings, weekends:** delayed; non-urgent messages may wait until Monday.
- **Holidays:** longer delays.

If something is urgent and time-sensitive, message with "URGENT" or call directly (operations has a phone line they'll share with you).

For routine questions, expect same-day or next-business-day response.

Tone

Operations communicates professionally. Match that. A few specifics:

Be specific. "My April earnings look wrong" is hard to act on. "My April earnings show \$1,200 but I expected \$2,500 based on the loads I knew were running on TRK-101 — can you walk me through the math?" is actionable.

Quote the dashboard. Screenshots help. So do specific line items from your breakdown.

Be patient with explanations. The first response might explain the data; if you still have questions, follow up. Don't expect a single message to resolve everything.

Be respectful. Operations is the team running your fleet day to day. They're on your side. Treat them like teammates, not vendors.

Real-time updates

The message thread updates in real time. When you send something, operations sees it within seconds. When they reply, you see it within seconds (if you have the dashboard open).

If your message is read but not replied to within a reasonable window, follow up with a brief check-in. Don't assume they're ignoring you — usually they're working on the answer.

Attaching photos or documents

Tap the paperclip icon in the message bar. Pick a photo or file from your device.

Common attachments:

- **Screenshot of a dashboard number** you're asking about.
- **Photo from a yard visit** if you noticed something.
- **Document** from your end (e.g., a tax form from your accountant with a question).

Keep file sizes reasonable — a few MB. Large files take longer to upload.

Privacy

Your messages with operations are private to your account and the LogisX team. Other investors don't see your messages. Drivers don't see them.

That said, LogisX administrators can read the audit-side. Treat the channel as work communication, not personal.

When to use phone

A few scenarios where phone beats messaging:

- **Time-sensitive situations** that need back-and-forth.
- **Complex contract or financial questions** that benefit from voice.
- **Sensitive conversations** (concerns, disputes).
- **Anything where you'd rather hear tone of voice.**

LogisX operations has a phone number you can call. Use it when text isn't enough.

After-hours coverage

If you message after hours and it's urgent, the typical pattern is:

1. **Send the message** describing the urgency.
2. **Call the after-hours line** if appropriate.

3. Don't expect routine messages to be answered overnight.

For most investors, after-hours communication is rare. Operations runs during business hours.

Records and history

Every message is preserved in the thread. You can scroll back as far as your account has been active. The history is useful for:

- **Re-reading explanations** of past dashboard questions.
- **Documenting agreements** ("Operations confirmed X on date Y").
- **Tracking issues** that span weeks.

If you need a specific message but can't find it, search by keyword.

Setting communication expectations

Some investors are high-touch (frequent questions, lots of conversations); others are low-touch (occasional check-ins). Either is fine.

Communicate your preferences:

- "I'd like a weekly status check-in" — operations can schedule.
- "I'll only message when I have specific questions" — operations won't pester.
- "I want to be informed of any maintenance over \$1,000" — operations will alert.

A clear understanding upfront beats inconsistent expectations.

Escalating beyond operations

Most issues resolve with operations directly. If they don't:

1. **Talk to your operations contact directly by phone.** Email and chat can lose nuance.
2. **Escalate to LogisX leadership.** Each investor has a relationship with a senior contact — typically the CEO (Deshorn King) or a designated manager.
3. **Refer to your contract.** The Master Agreement defines dispute resolution if direct conversation doesn't work.

Escalation is rare. Most things resolve in conversation.

Feedback

Operations welcomes feedback. About:

- **The platform** — features you'd like, things that are confusing.
- **Communication** — what's working, what isn't.
- **Reporting** — what data you wish you had.
- **The relationship overall** — how you're feeling about your investment.

Feedback shapes the future. Don't be shy.

Pro tips

- **Use the messages thread instead of email when you can.** It's in the same context as your dashboard data. Operations can refer to both at once.
- **Don't fragment a conversation.** If you're discussing one topic, keep it in one thread. Don't open a new conversation for each thought.
- **Acknowledge responses.** Even a "thanks, that clears it up" lets operations know they answered correctly. Helps them help you better next time.
- **Save important responses.** Screenshot or copy. If operations confirms something significant, you want it findable.

Adding Trucks to Your Fleet

You start with one truck (or whatever you initially funded). Over time, you may want to grow. This chapter is the process for adding additional trucks.

Why add trucks

A few reasons investors expand:

- **Strong returns on the first truck** lead to confidence in scaling.
- **Available capital** to deploy productively.
- **Tax-advantaged depreciation** on additional assets.
- **Risk diversification** — multiple trucks insulate against a single-truck issue.

A few reasons to wait:

- **Inconsistent performance** on existing trucks.
- **Soft freight market.**
- **Liquidity constraints.**
- **Capital better deployed elsewhere.**

Discuss with LogisX leadership and your own financial advisor.

The high-level process

Adding a truck involves several steps:

1. **Discussion with LogisX.** Confirm interest, timing, scale.
2. **Truck identification.** Either you find one, LogisX finds one, or a hybrid.
3. **Financing arrangement.** Capital from you; some structures involve LogisX or third-party financing.
4. **Purchase.** Title in your name (or LLC).
5. **Vehicle Lease signing** for the new truck.
6. **Truck registration in the system.**
7. **Driver assignment** (existing or newly hired).
8. **First load runs.**

Each step takes time. The whole process can run 4–12 weeks depending on truck availability, financing speed, and onboarding the driver.

Step 1: Conversation

Message operations or call. Express your interest in adding a truck.

Topics to cover:

- **Number of trucks** you want to add.
- **Timeline** for adding.
- **Capital available** for the purchase.
- **Preferred equipment** (dry van, reefer, flatbed, specific year/make).
- **Driver preference** — do you want LogisX to source, or do you have a driver in mind?

Operations will tell you about:

- **Current freight market** and demand outlook.
- **Truck availability** (used market, new market, lead times).
- **Any specific opportunities** they're aware of (existing trucks for sale, drivers looking for trucks).
- **Capital and financing** options.

This conversation is exploratory. No commitments yet.

Step 2: Finding the truck

Three paths:

You find it. You spot a used truck for sale on the market and want to purchase it. LogisX helps with the inspection and brings it into the fleet.

LogisX finds it. Operations has relationships with dealers and other carriers. They can source trucks matching your specs.

Hybrid. You and LogisX both look; the first promising find proceeds.

In any case, the truck needs to be:

- **In decent mechanical condition** (passes pre-purchase inspection).
- **Title-clean** (no liens, no salvage history unless disclosed).

- **Acceptable to LogisX** as fleet equipment.

Step 3: Financing

How the capital comes together:

All your capital. You write a check for the full purchase price. Simplest path.

Hybrid financing. You put down a portion; the rest is financed through a lender. The truck title may have a lien from the lender until paid.

LogisX financing. Less common, but possible in some structures. LogisX advances capital for the purchase; you pay back over time.

The Master Participation Agreement may have specific terms about how financing fits in. Refer to it.

Step 4: Purchase

Standard truck purchase process. Inspection, title transfer, payment. The truck title ends up in your name or your LLC.

LogisX may help coordinate, but you're the buyer and titleholder. Have a lawyer review the paperwork if amounts are significant.

Step 5: Vehicle Lease for the new truck

After purchase, you and LogisX sign a **new Vehicle Lease Agreement** specifically for this truck. The Vehicle Lease:

- Documents you as Lessor and LogisX as Lessee.
- Specifies the truck (VIN, year, make, model).
- Sets the terms (duration, fees, conditions).
- Inspects the condition at handover.

You sign electronically through the same Document Portal that holds your other agreements. The signed PDF appears in your portal.

Step 6: Truck registration in the system

Operations adds the truck to the LogisX system:

- **Trucks page** → Add new truck.
- **VIN, plate, year, make, model** entered.
- **Owner ID** set to your investor record (so revenue and expenses attribute correctly).
- **Fixed cost fields** populated (insurance, ELD, IRP, HVUT, maintenance fund).
- **Documents uploaded** (registration, insurance, inspection — once they're in your name).

Once registered, the truck appears on your Fleet Breakdown.

Step 7: Driver assignment

If you don't have a driver lined up:

- **LogisX hires** — typically from existing applications or new ones.
- **You suggest** — if you know a qualified driver looking for a truck.
- **Existing driver moves** — sometimes a driver moves to a new truck.

The driver undergoes the standard driver onboarding (documents, drug test, FMCSA Clearinghouse, training). Time: 1-3 days typically.

If a driver moves from another truck to yours, no onboarding needed — just an assignment change.

Step 8: First load

Once truck and driver are set, the driver picks the first load. Revenue starts accruing. Your dashboard shows the new truck and its earnings.

The first month is typically a "learning curve" — the driver adapts to the new truck, dispatch learns the truck's quirks, etc. Don't expect peak performance immediately.

Costs to anticipate

At purchase:

- Truck price.
- Inspection fees.

- Title transfer fees.
- Any registration / IRP setup.
- HVUT for the partial year.

Recurring monthly:

- Insurance.
- ELD subscription.
- IRP (annual / 12).
- HVUT (annual / 12).
- Maintenance fund reserve.

Trip variable:

- Fuel.
- Tolls.
- Repairs (occasional but inevitable).

The recurring costs accrue immediately. Revenue takes a few weeks to ramp.

Cash flow timing

Some realistic expectations:

- **Month 1 after purchase:** revenue is low (driver onboarding, load mix takes time). Expenses still accrue. Net may be slightly negative.
- **Month 2:** revenue improves. Net likely positive but lower than steady-state.
- **Month 3 onwards:** steady-state performance, similar to your existing trucks.

Plan capital flow with this curve in mind. The first month or two can be light.

Documentation per truck

Each new truck generates a new set of documents:

- **Vehicle Lease** (signed).
- **Exhibit A** (vehicle spec).
- **Truck records** in LogisX (registration, insurance, inspection).
- **Updated Master Agreement** (if any amendments needed).

All accessible from your Document Portal.

Scaling beyond a few trucks

For investors growing to 3+ trucks, additional considerations:

- **Driver pool** — are there enough drivers, or are you competing with LogisX-owned trucks for available drivers?
- **Maintenance capacity** — does the LogisX maintenance schedule scale?
- **Financial reporting complexity** — multiple trucks make tax reporting more involved.
- **Liquidity** — is your capital tied up across multiple trucks?

These aren't blockers; just things to plan for.

A note on speed

Adding a truck is not a fast process. Expect 4-12 weeks from "I want to add a truck" to "it's running its first load." The slowest steps are usually truck identification and driver hiring.

Don't make commitments based on a 4-week timeline; budget 8.

What you can't do unilaterally

- **Force-add a truck to LogisX management.** It requires LogisX agreement.
- **Change the Master Agreement terms** to favor your new truck differently. Same terms apply to all your trucks (unless explicitly amended).
- **Bypass driver onboarding.** Every driver goes through the same flow.
- **Self-dispatch your trucks.** They run under LogisX management.

These limits are by design — they protect both you and LogisX.

Pro tips

- **Run the numbers before committing.** Project revenue and costs for the first 6 months. Make sure it's a positive ROI scenario.
- **Don't add during slow seasons.** Late summer and winter are typically softer freight markets. Adding then puts you in a slow start.

- **Plan the timing with your taxes.** Section 179 deduction, depreciation strategies — work with your CPA.
- **Document everything.** Sale agreements, inspection reports, financing — keep paper copies.

Tax Forms and Year-End

January brings tax season. This chapter is what to expect, what you'll receive, and what to do with it.

What you'll receive

Depending on your structure (individual, single-member LLC, multi-member LLC, S-Corp), one of these tax forms will be generated:

1099-NEC

If you receive distributions as an individual or single-member LLC (treated as a sole proprietor for tax purposes), LogisX issues a **1099-NEC** documenting the total payments for the year.

The 1099-NEC shows:

- **Your name and TIN** (from the W-9 you signed during onboarding).
- **LogisX's payer information.**
- **Box 1:** total nonemployee compensation paid to you during the year.
- **Box 4:** any backup withholding (usually \$0 if your W-9 is in order).

Form arrives in your Document Portal in late January for the prior tax year. You'll also typically receive a physical or PDF copy emailed.

K-1

If your structure is a multi-member LLC or partnership with LogisX, you receive a **Schedule K-1** instead of (or in addition to) a 1099. The K-1 reports your share of the partnership's income, deductions, credits.

K-1s arrive later than 1099s (usually March, sometimes later) because the partnership's full accounting needs to close first.

W-2

If you're an employee (rare for investors but possible in some structures), you receive a W-2. Unlikely for an investor relationship.

How distributions are taxed

The structure matters:

As a sole proprietor (1099-NEC):

- All distributions are reportable income.
- Pay self-employment tax (Social Security + Medicare) on net profit.
- Deduct legitimate business expenses (fuel, repairs, insurance) on Schedule C.
- Pay quarterly estimated taxes during the year.

As a multi-member LLC or partnership (K-1):

- Income flows through to your personal return.
- Your share of profit, expenses, depreciation comes through the K-1.
- Pay estimated taxes on the flow-through income.

As an S-Corp (rare):

- Profits flow through.
- Distinctions between salary and distributions matter for self-employment tax.

Talk to a CPA. Don't guess on tax structure.

Depreciation

A major tax benefit of truck ownership: **depreciation**.

- **Section 179** allows immediate expensing of business equipment (including trucks) up to certain limits.
- **Bonus depreciation** allows accelerated expensing.
- **MACRS** (Modified Accelerated Cost Recovery System) standard depreciation schedule.

Trucks are depreciable assets. The depreciation schedule and choices affect your taxable income significantly. A new truck purchase in December can be a substantial year-end deduction.

Work with a CPA. The choices are not trivial.

What's in your Document Portal at year-end

By the end of January for the prior tax year:

- **1099-NEC or K-1** (whichever applies).
- **Year-summary report PDF** — you can generate it via Download Report with the full-year range. Has total revenue, total expenses, all categories — useful for your CPA.

By March:

- **K-1** if applicable.

You should also save copies of all monthly reports during the year — they're the supporting detail behind the year-summary.

What to give your CPA

Hand off:

- **1099-NEC or K-1.**
- **Year-summary report PDF.**
- **All monthly reports** for the year (12 PDFs).
- **Truck records** with purchase dates, prices, VINs.
- **Your bank statements** showing actual deposits.
- **Any documentation of capital additions** (truck additions during the year).
- **Any documentation of capital reductions** (truck sales, write-offs).

A good CPA can use all of this. A great one will ask for more.

Common tax questions

Q. Am I paying tax twice? No. The income is taxed once — to you. LogisX isn't a corporation paying corporate tax on the same dollars.

Q. Why is my reported income on the 1099 different from what I expected? The 1099 shows total payments. Your "expected" might be based on dashboard earnings (which include certain accruals). Reconcile via the year-summary report.

Q. Can I deduct truck expenses on my own return? Some — depends on structure. As a sole prop (1099-NEC), you can deduct ordinary and necessary business expenses including those related to your truck. Talk to CPA.

Q. What about driver pay — is that an expense I deduct? Driver pay is paid by LogisX out of revenue. You see it as a deduction on your dashboard, but it's not separately a deduction on your return — it's already netted out before your distribution.

Q. Maintenance — who pays, who deducts? Depends on the Master Agreement structure. In standard arrangements:

- LogisX pays for maintenance from the truck's pool of revenue.
- The maintenance expenses reduce your net profit (and thus your distribution).
- You don't separately deduct them on your return because they're already netted.

If your structure has you paying maintenance out of pocket, those are deductible separately.

Q. Insurance premiums — same question. Similar pattern. LogisX pays out of truck's revenue; reduces your distribution; not separately deductible.

Quarterly estimated taxes

If you're getting 1099 income, you owe **quarterly estimated taxes** to the IRS. Standard schedule:

- April 15: Q1 (Jan–Mar).
- June 15: Q2 (Apr–May).
- September 15: Q3 (Jun–Aug).
- January 15 of following year: Q4 (Sep–Dec).

Calculate based on your projected annual income and total tax liability. Underpaying triggers IRS penalties.

A common rule of thumb: set aside 25–30% of every distribution for taxes. Adjust based on your actual rate.

State taxes

You also owe state income tax (in most states). Same rules — quarterly estimated payments, file annually.

If you operate across multiple states (your trucks run in different states), you may have **multi-state filing** obligations. This gets complex; CPAs handle.

Tax planning during the year

Some moves to consider:

Buy a truck in Q4 to use Section 179 / bonus depreciation in the current year.

Time large expenses (maintenance, repairs) to optimize tax year.

Convert structure (sole prop to LLC, LLC to S-Corp) — has tax implications. Plan.

Retirement contributions — SEP-IRA, Solo 401(k) allow large pre-tax contributions for self-employed.

All of these are CPA conversations. Don't DIY tax strategy at scale.

When LogisX is the audit target

If LogisX is audited and the auditor wants records about your investment:

- LogisX will request your cooperation but won't share your personal records without permission.
- The audit may extend to investors in some cases (partnership audits especially).
- Your CPA should be involved if anything from LogisX's audit reaches you.

This is uncommon but possible. Have records organized.

What LogisX won't do for you

- **Prepare your tax return.** Get a CPA.
- **Advise on tax strategy.** Get a CPA.
- **Provide tax legal counsel.** Get a tax attorney if questions go that deep.
- **Take responsibility for your tax compliance.** That's on you.

LogisX provides the data (1099/K-1, year-summary, monthly reports). What you do with it is between you and your tax advisor.

Late filings and corrections

If LogisX issues a 1099 with wrong information:

1. **Compare to your records.** Is the amount actually wrong, or just unexpected?
2. **Message operations** to inquire. Walk through the discrepancy.
3. **If LogisX agrees it's wrong**, they'll issue a corrected 1099-NEC (1099-NEC Corrected). Use the corrected version on your return.

If you receive the 1099 late (after January), you can extend your personal filing deadline (form 4868). Don't ignore the late filing.

Pro tips

- **Start tax prep in February.** Don't wait until April. CPAs are busiest in late March.
- **Reconcile your bank deposits to your 1099 / dashboard.** Numbers should agree (within timing).
- **Save digital copies of everything.** Cloud-backed.
- **Keep records for 7 years.** IRS audit window.
- **Consider an LLC structure.** Many investors find LLC structures advantageous for liability and tax planning. Talk to a lawyer and CPA.

Troubleshooting

Common investor dashboard issues and what to do about them.

"I can't sign in."

Standard checks:

- **Caps lock off?** Username and password are case-sensitive.
- **Right URL?** `app.logisx.com`, not the marketing site `logisx.com`.
- **Recent password change?** If the change didn't save correctly, contact operations.
- **Brute-force lockout?** After multiple failed attempts, the system blocks for 15 minutes. Wait.

If none of those, message operations or call.

"I see the wrong dashboard."

If you signed in but see a different view than expected:

- **Driver app at `/driver`?** Your role got changed. Message operations.
- **Operations dashboard at `/dashboard`?** Same issue.
- **Blank or error page?** Refresh. If still wrong, message operations.

Your role should be **Investor**. Verify in your profile.

Dashboard data issues

"My earnings are showing \$0 for a month I know my fleet was running."

Three things to check, in order:

1. **Your company_name field.** From your profile, verify it matches the carrier name on your trucks' records. Spelling matters (case-insensitive but no typos).
2. **The Owner ID on the loads.** Loads should have your investor record ID in their Owner ID column. If they don't, attribution fails.
3. **Recent cancellations.** A load that was cancelled drops out of revenue. If many of your loads were recently cancelled, your earnings will reflect that.

If all three look right and earnings are still \$0, message operations with specifics.

"My earnings are much lower than expected."

- **Cancelled loads** drop out (verify status on each load).
- **Date attribution** — a load assigned in March counts in March (not April when it delivered).
- **Driver pay multi-day** — a 3-day load = \$750 in driver pay for daily-rate drivers, not \$250.
- **Pending expenses** that get approved later reduce your earnings retroactively.

Drill into the dashboard breakdown to see exactly where the math went.

"My monthly view and all-time view don't add up exactly."

Common cause: loads with incorrect pickup or dropoff dates. The date affects active-day counts, which affect driver pay, which affects net profit.

If a load was assigned in April but its pickup date in the system shows 2021, the load's revenue counts in April but its active days count toward 2021. The math doesn't reconcile.

Message operations to verify the dates and fix if needed.

"Fleet Breakdown shows a truck I don't own."

Possible mistake in the Owner ID. Operations can fix.

"A truck I do own isn't showing."

Same — Owner ID mismatch. Operations can fix.

"The mileage on a truck looks wrong."

LogisX tracks mileage from fuel receipts and driver reports. If the dashboard shows much less mileage than reality, the data may be lagging. Message operations to update.

"A truck shows as Maintenance but I haven't been told."

Maintenance status is set by operations when a truck is in the shop. If you weren't informed:

- The maintenance may have been a quick service (planned).
- Communication may have been missed on operations' side.

Either way, ask. Operations can tell you what's happening with the truck.

Reports and downloads

"The Download Report button doesn't do anything."

Refresh the page. Try again. If the PDF doesn't download, check your browser's pop-up blocker — some browsers block PDF downloads.

If still not working, your file size limit may be exceeded (rare). Message operations.

"The downloaded PDF is corrupted or won't open."

Try downloading again. PDFs sometimes get corrupted in transit. If repeated downloads are corrupted, escalate.

"The PDF report shows different numbers than the dashboard."

Possible reasons:

- **Different date ranges.** Verify both views are using the same range.
- **Different generation times.** The dashboard updates live; the PDF locks numbers at generation time. Expenses approved between generation and view will show on dashboard but not on the older PDF.

Regenerate the PDF if the dashboard has newer data.

Documents and portal

"A document I signed isn't showing in my portal."

- **Refresh the page.** Sometimes documents lag a few seconds.
- **Check the right section.** Documents are categorized; look in onboarding, operating, and reports separately.
- **Message operations.** If it's truly missing, they can re-attach.

"A document is showing as corrupted or won't view."

- **Refresh.**
- **Download and open in a separate PDF viewer.**
- **If still bad, message operations** — the file may need re-uploading on their end.

"My W-9 wasn't accepted (received wrong tax info)."

If the 1099 you received has wrong information (wrong TIN, wrong address, wrong amount):

- Compare to your records.
- Message operations to flag the discrepancy.
- They issue a corrected 1099-NEC if appropriate.

Messaging issues

"My messages aren't being delivered."

Refresh the page. If you sent a message and it's still showing as "sending" after a minute, the connection may have dropped. Refresh and try again.

If the message went but operations didn't see it, that's a different issue — escalate.

"Operations hasn't responded in hours."

During business hours, response should be within 1-2 hours. If longer:

1. Send a follow-up message.
2. If still no response after another few hours, call directly.

If it's after hours, expect delays.

Truck and fleet issues

"My truck shows as Available for days/weeks."

A truck idle for an extended period is unusual:

- **Driver could be on extended leave** (vacation, medical, family).
- **Truck could be undocumented in maintenance** (operational issue not yet logged).
- **Dispatch capacity issue** — too few loads matching this truck.

Message operations to ask. Idle trucks are lost revenue.

"I see expenses for a truck I don't own."

Possible attribution error. Message operations.

"A driver assigned to my truck isn't appearing in any system."

Operations would know. Message them.

Account and settings

"Profile photo upload isn't working."

Photo file too large? Try a smaller image. Format wrong? Use JPG or PNG.

"Change password isn't saving."

Try again. If still failing, escalate to operations.

"I can't update my email or phone."

These edits should work. If they don't, message operations.

System-wide issues

"The whole dashboard is slow."

Could be temporary server load. Try again in a few minutes. The system caches aggressively; brief slowness usually resolves.

"Nothing is updating in real time."

The Socket.IO connection may have dropped. Refresh the page to reconnect.

"I get logged out frequently."

Sessions time out after extended inactivity. Sign back in. If you're being logged out within minutes (not hours), there may be a session issue — escalate.

Calculation transparency

If a number doesn't make sense and you want to verify the math:

1. **Click into the breakdown row** (each line is clickable).
2. **See the underlying loads and expenses** that make up the number.
3. **Compare to your expectations** load by load.
4. **Identify the specific discrepancy.**
5. **Message operations** with the specific load IDs or expense IDs in question.

Don't argue with the dashboard. Argue with the data behind it.

Tax form issues

"My 1099 didn't arrive."

Check spam folder. Check your Document Portal. If still not there by mid-February, message operations.

"My 1099 has wrong information."

Operations can issue a corrected 1099-NEC. Provide the specific discrepancy.

"I need a K-1 but got a 1099." (or vice versa)

Possibly a tax structure mismatch. Message operations and your CPA to determine the correct form.

Escalation

If operations can't resolve:

- **Call directly.** Voice resolves things faster than chat.
- **Escalate to LogisX leadership.** Senior contacts can intervene.
- **Refer to your contract** for dispute resolution if needed.

Issues that escalate are rare — most things resolve in conversation. But when they don't, you have paths.

What to have ready when you escalate

Provide:

- **The specific issue** (be precise).
- **What you saw on the dashboard** (screenshot).
- **What you expected to see** (if applicable).
- **Specific load IDs, expense IDs, or document references** involved.
- **Timeline** — when did you notice, how often does it occur.
- **Whether it's blocking** (urgent vs. routine).

The more specific, the faster the resolution.

Frequently Asked Questions

The questions investors ask most often.

The investment itself

Q. What am I buying when I invest in LogisX? You're buying one or more trucks, which LogisX operates under contract. You own the truck (title in your name or LLC); LogisX manages day-to-day operations.

Q. What returns can I expect? Varies. Strong trucks in busy markets can generate 15–30% annualized return on capital invested. Slow markets or maintenance-heavy years can be lower. No guarantees — trucking has cycles.

Q. What's the typical commitment period? The Master Participation & Management Agreement defines terms; typical durations are 3–5 years with extensions. Exit before then has terms in your contract.

Q. What if I want to exit early? Refer to your Master Agreement. Typically involves notice period, asset disposition (sell truck back to LogisX, sell to third party, etc.), and final settlement of accounts.

Q. Who decides which loads my truck runs? LogisX operations. You don't decide. The Master Agreement gives operational authority to LogisX.

Q. Can I have a say in driver hiring? You can suggest drivers and discuss preferences with operations. Hiring decisions are made by LogisX leadership.

Q. Can I visit my truck? Yes. LogisX is your business partner; the truck is your asset. Schedule visits with operations.

Dashboard and reporting

Q. How often does the dashboard update? Real-time. As loads close, expenses post, and statuses change, the dashboard reflects them within seconds.

Q. Why is my dashboard sometimes slow? The system reads from Google Sheets, which has API rate limits. The system caches aggressively but bursts can cause brief slowness.

Q. Can I see year-over-year comparisons? Not built-in. Generate reports for the same range across years and compare manually.

Q. Can I export data to spreadsheet? Generate a PDF report and extract numbers manually. There's no direct CSV export currently.

Q. Can I see the original load rate confirmations? Not from the dashboard. Operations has them; message to request.

Q. The numbers on my dashboard don't match what I expected — what now? Click into the breakdown to see the underlying loads and expenses. Compare to your records. Message operations with specifics if still confused.

Earnings and pay

Q. How is my profit split with LogisX? Typically 50/50 of net profit, per your Master Agreement. Net profit = revenue minus all expenses (driver pay, fixed costs, trip expenses).

Q. Can the split be different per truck? Theoretically yes if your contract has truck-specific terms. Generally no — same split applies across your fleet.

Q. When do I get distributions? Typically the first week of the following month for the prior month's earnings. Direct deposit to the bank account you set up during onboarding.

Q. Why is my distribution lower than my dashboard's "Your Earnings" line? Possible causes:

- Timing differences (expense approved after distribution calculated).
- Retained capital (some structures retain a portion for reserves).
- Tax withholding (rare but possible).

Check your bank deposit against the dashboard. Message operations if discrepancy.

Q. What happens if my truck has a bad month and earnings are negative? Net negative is rare but possible. In a negative month, you don't get a distribution; the deficit may be carried forward against future profits. Your contract spells out exactly how this works.

Q. What if revenue grew but expenses grew more? Net could shrink. Your dashboard shows it.

Q. What if I want monthly statements? Generate a PDF report each month from the dashboard. It's your monthly statement.

Fleet

Q. How many trucks can I add? No formal limit. Practically, the constraint is operational capacity (drivers, dispatch attention, maintenance bandwidth).

Q. What's the process for adding a truck? See the Adding Trucks chapter. Discussion, identification, financing, purchase, lease signing, registration, driver, first load.

Q. Can I sell my truck back to LogisX? Discuss with leadership. The buy-sell terms depend on your situation.

Q. What happens if my truck is in an accident? Insurance covers physical damage. LogisX coordinates repair or replacement. Lost-revenue periods (truck in shop) show in your dashboard as lower revenue for that period.

Q. What if a driver damages my truck through negligence? Standard insurance covers most damage. Negligent damage may have driver-side consequences. LogisX handles the operational side; serious incidents may involve legal counsel.

Q. Can I choose my driver? Influence yes, choose no. Operations assigns.

Contract and legal

Q. Where is my Master Agreement? Document Portal. Open and re-read periodically.

Q. Can the Master Agreement be amended? Yes, by mutual agreement. Amendments are documented and signed.

Q. What's the difference between the Master Agreement and the Vehicle Lease?

- **Master Agreement** is the umbrella contract for your relationship with LogisX.
- **Vehicle Lease** is per-truck; documents you (Lessor) leasing the truck to LogisX (Lessee).

You sign one Master Agreement and one Vehicle Lease per truck.

Q. Do I need a lawyer for the Master Agreement? Strongly recommended. The Agreement is a substantial document with long-term implications. Have a lawyer review before signing.

Q. Can I assign my interest to someone else? Refer to your contract. Generally limited; transfers typically require LogisX consent.

Q. What happens to my fleet if I die or become incapacitated? Refer to your contract and your own estate planning. Most arrangements have provisions for successors or estate execution.

Taxes

Q. Will I get a 1099 or K-1? Depends on your structure. Individuals and single-member LLCs typically get a 1099-NEC. Partnerships and multi-member LLCs get a K-1.

Q. When does the 1099 arrive? Late January for the prior tax year.

Q. Can I deduct truck expenses on my personal return? Most truck expenses are deducted from revenue before your distribution — they're already netted out. Talk to a CPA for specifics.

Q. What about depreciation? Trucks are depreciable assets. Section 179 / bonus depreciation / MACRS apply. Talk to a CPA.

Q. Should I form an LLC? Many investors find LLCs beneficial for liability and tax. Talk to a lawyer.

Q. Should I pay quarterly estimated taxes? If you receive 1099 income, yes. Estimate based on your projected annual liability.

Communication

Q. How quickly does operations respond to messages? Business hours: minutes to a couple of hours. After hours: delayed.

Q. Can I call operations directly? Yes. Operations has a phone number you can use. Get it from your onboarding contact.

Q. Who is my main contact at LogisX? Typically the CEO (Deshorn King) or a designated investor relations manager. Your onboarding contact can confirm.

Q. Can I attend company meetings? Depends on the company structure. Sometimes investors are invited to quarterly reviews.

Technical

Q. Is the platform secure? Standard web-security baseline — HTTPS, session cookies with security flags, role-based access, audit logging.

Q. Can I access the dashboard from multiple devices? Yes. Same login works everywhere.

Q. Mobile app? The web dashboard works on mobile browsers. No separate native app.

Q. What browser should I use? Chrome, Safari, Edge, Firefox — all modern browsers.

Q. Can I download my historical reports? Yes. Generate any report covering any historical range from the Download Report button.

Career and feedback

Q. Can I refer other investors? Typically yes. Discuss with LogisX leadership about how referrals are handled.

Q. Can I give feedback about the platform? Yes, please. Feedback shapes the product. Message operations or escalate to leadership.

Q. Can I see your financial statements? Generally no, beyond what's in your dashboard (your slice of operations). Company-wide financials are not shared with investors.

Q. Can I attend the annual meeting? Depends on whether one exists and your relationship terms.

Growing concerns

Q. What if the freight market crashes? Some pain in trucking. Your dashboard will show declining revenue. Communication from LogisX about strategy.

Q. What if a key person leaves LogisX? Operations continues; ownership of the truck and the contract is preserved. Leadership transitions are typically planned.

Q. What if regulations change? LogisX adapts. Drivers may need new certifications; trucks may need upgrades. Communicated as it happens.

Q. What if I disagree with a LogisX decision? Talk to operations. Escalate to leadership. Refer to your contract for dispute resolution.

That's the standard FAQ. For anything more specific, message operations.
